Instruction: *All Versions:* Lectures and practical exercises in supply, including allied supply support, supply services, management, and base supply accounting. *Version 1:* Topics include control of the supply system, analysis of major command management objectives, applied management principles and techniques, analysis of supply management reports and listings, interrelationships between various base support functions and base supply, relationship of base supply to AFLC depots, general techniques of internal operation for base supply branches and sections, and specific techniques for management of functional areas. *Version 2:* Topics include control of the supply system, analysis of major command management objectives, applied management principles and techniques, analysis of supply management reports and listings, interrelationships between various base support functions and base supply, relationship of base supply to AFLC depots, general techniques of internal operation for base supply branches and sections, and specific techniques for management of functional areas. *Version 3:* Topics include staff study reports and staff visits, supply financial management systems, supply improvement and work measurement programs, management controls, placement and management of Air Force assets, supply sources, prescribed storage procedures, monetary and item accounting, ground communications and electronics, management techniques, disposition of excesses and electronic data processing, operational plans and programs, budget and funding, and weapon and ballistic missile support systems. *Version 4:* Topics include staff study reports and staff visits, supply financial management systems, supply improvement and work measurement programs, management controls, placement and management of Air Force assets, supply sources, prescribed storage procedures, monetary and item accounting, ground communications and electronics, selective management techniques, disposition of excesses, mechanized and electronic data processing, operational plans and programs, budget and funding, weapon and ballistic missile support systems, and facilities planning. *Version 5:* Topics include publications in supply management, inventory control, and the management process. *Version 6:* Topics include publications, inventory control, and the management process.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in supply management (8/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in supply management (8/74). *Version 3:* In the upper-division baccalaureate category, 1 semester hour in supply management (8/74). *Version 4:* In the upper-division baccalaureate category, 2 semester hours in supply management (8/74). *Version 5:* In the upper-division baccalaureate category, 2 semester hours in supply management (8/74). *Version 6:* In the upper-division baccalaureate category, 2 semester hours in supply management (8/74).

AF-1405-0055

PROCUREMENT OFFICER

Course Number: *Version 1:* 3OBR6531-1. *Version 2:* OBR6531; OBR6621; OB6621. *Version 3:* OBR6531; OBR6621; OB6621.

Location: *Version 1:* 3415th Technical School, Lowry AFB, CO. *Version 2:* 3320th Technical School, Amarillo AFB, TX. *Version 3:* 3450th Technical School, Warren AFB, WY.

Length: *Version 1:* 7 weeks (204 hours). *Version 2:* 6–7 weeks (180–240 hours). *Version 3:* 6–7 weeks (180–240 hours).

Exhibit Dates: *Version 1:* 9/68–12/73. *Version 2:* 6/56–8/68. *Version 3:* 6/56–8/68.

Objectives: To train commissioned officers to perform as procurement officers.

Instruction: Lectures and practical exercises in the duties of a procurement officer. Topics include procurement procedures, methods of procurement, types of contracts, contract preparation, and administrative procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in procurement management (8/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in principles of contract negotiation (12/68). *Version 3:* In the upper-division baccalaureate category, 4 semester hours in principles of contract negotiation (12/68).

AF-1405-0056

DISPOSAL MANAGEMENT

Course Number: OTS6631-1.

Location: 3320th Technical School, Amarillo AFB, TX.

Length: 3 weeks (90 hours).

Exhibit Dates: 8/58–12/68.

Objectives: To train selected commissioned officers to manage and dispose of excess and surplus personal property.

Instruction: Lectures and practical exercises in the disposal and management of excess and surplus personal property. Course includes storage procedures; facilities; materials handling; establishment of records; reporting of excess property; planning and conducting spot bid sales, sealed bid sales, auctions, and retail and negotiated sales.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in supply management (12/68).

AF-1405-0059

INVENTORY MANAGEMENT SUPERVISOR BY CORRESPONDENCE

Course Number: 64570.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/84–Present.

Objectives: This courses provides a review of functions and procedures regarding inventory management in the Air Force and it provides information for supervisors in supervising, training, and assigning of personnel in inventory control.

Instruction: This course includes a review of various functions involved in inventory management such as completing inventory records, requisitioning materials, preparing stock control records and reports, issuing supplies and materials, handling retail sales and manual accounting procedures. In addition, it provides information for assigning, training and evaluating of personnel; for identifying, planning, developing, and changing procedures concerning inventory management; for interpreting policies; and for developing inventory schedules.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in record management (10/85). In the upper-division baccalaureate category, 2 semester hours in principles of supervision (10/85).

AF-1405-0060

PRODUCTION CONTROL SPECIALIST BY CORRESPONDENCE

Course Number: 55530.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 8/86-Present.

Objectives: To provide specialty knowledge and upgrade training as an apprentice production control specialist.

Instruction: This correspondence course consists of basic organization and supervision in production control; basic civil engineer automated management systems, work control and labor subsystems and maintnance; and work authorization and work planning.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/86).

AF-1405-0061

APPRENTICE PACKAGING SPECIALIST BY CORRESPONDENCE

Course Number: 60232.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/84-6/89.

Learning Outcomes: At the conclusion of the course the student will be able to understand the packaging process and role of packaging control.

Instruction: Topics covered include general packaging, packaging control, the packaging process, documentation and specialized packaging requirements.

Credit Recommendation: In the vocational certificate category, 1 semester hour in warehouse supervision (2/87).

AF-1405-0062

PACKAGING SPECIALIST BY CORRESPONDENCE

Course Number: 60252.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/85-6/89.

Learning Outcomes: At the conclusion of the course the student will have an understanding of the packaging process and the role of packing control.

Instruction: Topics covered include general packaging, packaging control, the packaging process, documentation and specialized packaging requirements.

Credit Recommendation: In the vocational certificate category, 1 semester hour in warehouse supervision (2/87).

AF-1405-0064

INVENTORY MANAGEMENT SPECIALIST (MUNITIONS) BY CORRESPONDENCE

Course Number: 64550A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide information on supply systems, procedures, inventory management and automation procedures in munitions management.

Instruction: Instruction includes elements of data processing, records management inventory control, requisitioning procedures, shipping and receiving, documents control and preparation of reports.

Credit Recommendation: In the vocational certificate category, 1 semester hour in data processing, 1 in records management and 1 in report writing (2/87).

AF-1405-0065

INVENTORY MANAGEMENT SUPERVISOR (MUNITIONS) BY CORRESPONDENCE

Course Number: 64570A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/86-6/89.

Learning Outcomes: Upon completion of the course, the student will be able to provide information of supply systems, procedures, inventory management and automation procedures in munitions management.

Instruction: Instruction includes elements of data processing, records management, inventory management and control, requisitioning procedures, documents control and preparation of reports.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in data processing and 1 in records management (2/87).

AF-1405-0066

SUPPLY SYSTEMS ANALYSIS SUPERVISOR BY CORRESPONDENCEE

Course Number: 64572.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to understand the components of the Air Force Logistics system, understand the automated standard base supply system and its interfacing systems, be able to code Sperry job control language, understand data base concepts and operations and be able to access, update and maintain a complex computerized data base of supply information.

Instruction: Instruction includes two separate subject areas. One topic involves the specific components, jobs, procedures, and policies of Air Force Logistics and Supply. The other topic presented is data processing. This topic is introduced at the conceptual level and quickly progresses into the area of data base management systems. The student learns the commands to access, update and maintain the complex computerized data bases supporting Air Force supply systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in data processing and 3 in data base management systems (2/87).

AF-1405-0067

INTRODUCTION TO THE QUALITY FUNCTION BY CORRESPONDENCE

Course Number: 6601.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/78-Present.

Learning Outcomes: At the conclusion of the course student will understand the function of quality control and assurance; know the components of a quality control program; have gained an appreciation of the special problems of quality control and assurance; and be able to evaluate and measure quality control.

Instruction: This course covers the quality control and assurance function, the various problems of quality control and assurance, developing a quality control program, and methods for evaluating and measuring quality. Although much of the orientation is on quality control in defense logistics, the instruction parallels the logistics cycle in industry.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in production control (2/87).

AF-1405-0068

MANAGEMENT OF VALUE ENGINEERING BY CORRESPONDENCE

Course Number: 6603.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/83-Present.

Learning Outcomes: Upon completion of the course, the student will be able to understand the necessity of obtaining top quality products and services at the lowest prices, understand the need for cost reduction without sacrificing necessary functions and performance, understand the need for creative problem solving techniques, understand the need for studying problem analysis and functional cost analysis, and understand the need for minute planning in determining job, product and service specifications.

Instruction: Instruction includes creative thinking and and brainstorming techniques in the acquisition of products and services and how they relate to DOD activities. Also included are cost estimating, bid functions, contractual aspects and value judgement methodology and incentives in value engineering.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (2/87).

AF-1405-0069

INTEGRATED ORGANIZATIONAL AVIONIC SYSTEMS SPECIALIST BY CORRESPONDENCE

Course Number: 45250A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/89-Present.

Learning Outcomes: Upon completion of the course, the student will comprehend material management procedures, and indentify aircraft tools and hardware, perform solderless wire connections and understand the operating principles of a voltmeter, ohmmeter and ammeter.

Instruction: The student will receive instruction concerning material management procedures, various tools and hardware used on aircraft, indentification and construction of solderless electrical connections and the care and use of electrical measuring instruments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in materials management (12/89).

AF-1406-0003

RECRUITER

Course Number: 3AZR99120.

Location: School of Applied Aerospace Sciences (ATC), Lackland AFB, TX; 3275th Technical School, Lackland AFB, TX.

Length: 7 weeks (391 hours).

Exhibit Dates: 8/73-12/73.

Objectives: To train noncommissioned officers in the procedures and techniques of recruiting.

Instruction: Lectures in principles of recruiting, including sales techniques, record keeping, advertising principles and merchandising techniques, public relations, speech fundamentals and practice speaking, classifying and processing applicants, eligibility requirements, and techniques in qualifying a prospect.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in public relations or marketing (2/74).

AF-1406-0004

1. Manpower Management Technician
2. Management Technician

Course Number: *Version 1:* AL73330. *Version 2:* AL80170.

Location: 3310th Technical School, Scott AFB, IL. *Version 1:* 3700th Technical School, Lackland AFB, TX.

Length: *Version 1:* 6-8 weeks (180-240 hours). *Version 2:* 8 weeks (240 hours).

Exhibit Dates: *Version 1:* 9/55-12/68. *Version 2:* 5/54-8/55.

Objectives: To train airmen to perform studies of management methods, organizational structures, and manpower utilization and allocation.

Instruction: *All Versions:* Lectures and practical exercises in analysis of organizational structures, and in utilization of manning tables, personnel methods, and management techniques. *Version 1:* Lectures on conducting management training and on management engineering techniques.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in management analysis, and 2 in principles of personnel management (12/68). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in personnel administration (12/68).

AF-1406-0005

Personnel Specialist
(Classification Specialist)

Course Number: 3ABR73230; 3ABR73230-1; ABR73230-1; ABR73230; AB73230; AB73231.

Location: 3380th Technical School, Keesler AFB, MS; 3320th Technical School, Amarillo AFB, TX; 3505th Technical School, Greenville AFB, MS; 3700th Technical School, Lackland AFB, TX; 3310th Technical School, Scott AFB, IL.

Length: 7-18 weeks (306-480 hours).

Exhibit Dates: 5/54-12/73.

Objectives: To provide airmen with the knowledge and skills of apprentice personnel specialists.

Instruction: Lectures in career assistance and counseling; personnel records; data control; typing; and pay, allowances, and personal affairs procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in personnel classification, and credit in typing on the basis of institutional evaluation (12/68).

AF-1406-0006

Recruiter
(USAF Recruiter)

Course Number: AZR99120; XX99020; SS99020.

Location: 3275th Technical School, Lackland AFB, TX; 3700th Technical School, Lackland AFB, TX.

Length: 8-9 weeks (228-308 hours).

Exhibit Dates: 1/55-12/68.

Objectives: To train enlisted personnel to be recruiters.

Instruction: Lectures in recruiting, including information dissemination, speech fundamentals, telephone techniques, processing applicants, counseling, service benefits, eligibility requirements, selective recruiting concepts, reporting for the press, community relations, radio and TV, high school program, printed publicity, practice speaking, and practice selling.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in salesmanship (6/74).

AF-1406-0009

Criterion Referenced Instruction (CRI) Workshop

Course Number: CRI-1; 120010.

Location: Tactical Air Command, Nellis AFB, NV; Strategic Training Squadron (SAC), Patrick AFB, FL; Strategic Training Squadron (SAC), Shaw AFB, SC; Strategic Training Squadron (SAC), Luke AFB, AZ; Strategic Training Squadron (SAC), Holloman AFB,NM; Strategic Training Squadron (SAC), Hill AFB, UT; Strategic Training Squadron (SAC), Luke AFB, AZ; Strategic Training Squadron (SAC), Davis-Monthan AFB, AZ; Strategic Training Squadron (SAC), Cannon AFB,NM; Strategic Training Squadron (SAC), Mt. Home AFB, ID; Strategic Training Squadron (SAC), George AFB, CA; Strategic Training Squadron (SAC), Tinker AFB, OK; Strategic Training Squadron (SAC), Eglin AFB, FL; Strategic Training Squadron (SAC), Carswell AFB, TX.

Length: Self-paced 3 weeks (120 hours).

Exhibit Dates: 4/76-1/88.

Objectives: The course is designed for U.S. Air Force officers, airmen and civilian personnel to teach the preparation of criterion-referenced instruction to support Instructional System.

Instruction: Training includes performing task and goal analyses, preparing criterion objectives and tests, identifying relevant course aterials, designing course control documents, and applying performance management principles. Emphasis is placed on anaysis, design, and implementation. Course is conducted in a self-paced workshop format in a 3-week, 120-hour design and provides learning materials, multi-media instruction, and resource persons to enrollees.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in instructional design (8/77); In the graduate degree category, credit may be considered on the basis of individual institutional policy and evaluation (9/79).

AF-1406-0010

Pilot Instructor Training (T-38)

Course Number: F-V5A-B.

Location: Air Training Command, Randolph AFB, TX; Air Training Command, Tyndall AFB, FL.

Length: 13 weeks (210 hours).

Exhibit Dates: 2/73-2/90.

Objectives: To train pilots as instructor pilots.

Instruction: Lectures and practical exercises in pilot instructor training, including policies and procedures, contact flying, formation flying, synthetic instrument training, instrument flying, principles of instruction, aircraft systems, applied aerodynamics, flight planning, air traffic control, pilot procedures, flight rules, and methods and techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in instructional methods (6/75).

AF-1406-0011

Pilot Instructor Training (T-41)

Course Number: F-V5C-B; F-V5C-B-O.

Location: Air Training Command, Petersen Field, CO.

Length: 5 weeks (93-97 hours).

Exhibit Dates: 9/67-5/74.

Objectives: To train pilots as aircraft instructor pilots.

Instruction: Lectures and practical exercises in instructional methods as applied to flight training. Course includes flight training, aircraft systems, flying safety, and principles of instruction.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in teacher education (6/74); in the upper-division baccalaureate category, credit in instructional methods on the basis of institutional evaluation (12/68).

AF-1406-0021

Pilot Instructor Training (T-37)

Course Number: F-V5A-A; F111507Q.

Location: Air Training Command, Randolph AFB, TX; Air Training Command, Perrin AFB, TX; Air Training Command, James Connally AFB, TX; Air Training Command, Williams AFB, AZ.

Length: 9-13 weeks (192-224 hours).

Exhibit Dates: 4/63-2/90.

Objectives: To train pilots as flight instructors in T-37 aircraft.

Instruction: Lectures and practical exercises in methods of instruction, grading and testing techniques, aircraft systems, applied aerodynamics, flight planning, flying safety, base management system, and contact, instrument and formation flying.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in instructional methods (6/75).

AF-1406-0023

Technical Instructor

Course Number: 5AIK75100.

Location: Security Service School, Goodfellow AFB, TX.

Length: *Version 1:* 16 weeks (480 hours). *Version 2:* 6 weeks (172 hours).

Exhibit Dates: *Version 1:* 4/71-12/73. *Version 2:* 4/68-3/71.

Objectives: To train newly assigned instructor personnel to perform classroom instruction.

Instruction: Lectures and practical exercises in instructional methods. Course includes principles of learning, communication skills, instructional aids, evaluation techniques, instructional management, and a wide range of material in the psychology and philosophy of education.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in tests and measurement, 6 in instructional methods (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in instructional methods (12/68).

AF-1406-0024

1. INSTRUCTIONAL SYSTEMS MATERIALS DEVELOPMENT
   (Instructional Programmer)
2. INSTRUCTIONAL PROGRAMMER

Course Number: *Version 1:* 3AZR75100. *Version 2:* AZR75100.

Location: *Version 1:* 3275th Technical School, Lackland AFB, TX; *Version 1:* 3375th Technical School, Lackland AFB, TX. *Version 2:* 3375th Technical School, Lackland AFB, TX.

Length: 5 weeks (150 hours).

Exhibit Dates: *Version 1:* 1/71-12/73. *Version 2:* 11/65-12/70.

Objectives: To train airmen and officers in instructional systems technology.

Instruction: *All Versions:* Lectures and practical exercises in instructional programming/systems technology, including theory of programmed/systems instruction, program planning and writing, test development, editing instructional materials, and task/subject analysis. *Version 1:* Includes development of learning objectives, theory of self-instruction and self-instructional programs, instructor-presented programs, audiovisual programs, and validation and implementation. *Version 2:* Includes stimulus-response inventory and teaching points, chaining procedures, and terminal and subterminal frames.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 10 semester hours in instructional technology with emphasis on programmed instruction (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in instructional programming in the field of teacher education (12/68).

AF-1406-0027

OTS INSTRUCTOR TRAINING

Course Number: 3OIR0904-1; 3OIR7531-1.

Location: Officer Training School, Lackland AFB, TX.

Length: 3 weeks (80-98 hours).

Exhibit Dates: 6/69-12/73.

Objectives: To train officers as instructors for officer training school.

Instruction: Lectures and practical exercises in the duties of instructors for officer training school, including psychology of learning, communications, practice teaching using lectures, discussion and demonstration/performance methods, measurement and evaluation procedures, sports refereeing, and school administrative procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in instructional technology (7/74).

AF-1406-0028

MULTI-MEDIA TEACHING SYSTEM
(DEVELOPMENT)

Course Number: 3AZR75173-1.

Location: Training Center, Lackland AFB, TX.

Length: 4 weeks (120 hours).

Exhibit Dates: 9/69-12/73.

Objectives: To train enlisted personnel as traffic safety assistants capable of using multimedia teaching systems.

Instruction: Lectures and practical exercises in preparation of multimedia training materials for traffic safety courses, including curriculum analysis, learning objectives, teaching points and sequencing of teaching points, preparation of visual aids, selection of visual aids, script and audio track preparation, and visual assembly.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in instructional media methodology on the basis of institutional evaluation (7/74).

AF-1406-0029

INSTRUMENT PILOT INSTRUCTOR
(HELICOPTER)

Course Number: F-V5G-G.

Location: Air Training Command, Randolph AFB, TX.

Length: 6 weeks (188-195 hours).

Exhibit Dates: 8/72-1/88.

Objectives: To train rated helicopter pilots to perform as instrument flight instructors.

Instruction: Lectures and practical exercises in instrument flight instruction techniques and procedures. Course includes principles of instruction/evaluation, navigational aids, weather, and FAA regulations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in teacher education (7/74).

AF-1406-0030

TECHNICAL INSTRUCTOR

Course Number: *Version 1:* 3AIR75100-X; 3AIR75100-2; 3AIR75100-4; 3AIR75100-5; 3AIR75100-6. *Version 2:* 3AIR75100-6; AIR75100-1; AIR75100-2; AIR75100-3; AIR75100-4; AIR75100-6; IT75100-1; IT75100-4; IT75100-6; IT75100.

Location: Technical School, Lowry AFB, CO; Technical School, Lackland AFB, TX; Technical School, Amarillo AFB, TX; Technical School, Warren AFB, WY; Technical School, Parks AFB, CA; Technical School, Sheppard AFB, TX; Technical School, Keesler AFB, MS; Technical School, Scott AFB, IL; Technical School, Chanute AFB, IL; Technical School, Randolph AFB, TX.

Length: *Version 1:* 8 weeks (240 hours). *Version 2:* 8 weeks (240-246 hours).

Exhibit Dates: *Version 1:* 3/68-1/87. *Version 2:* 11/54-2/68.

Objectives: To train enlisted personnel as technical instructors.

Instruction: *All Versions:* Lectures and practical exercises in instructional methods and techniques, including communication, learning principles, developmental teaching concepts, preparing objectives and lessons, various methods of teaching, instructional aids, counseling, measurement procedures, study techniques, and administration and practice teaching. *Version 1:* Includes programmed instruction.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in observation and methods, 2 in instructional technology, and 3 in practice teaching (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in instructional methods (12/68).

AF-1406-0031

PERSONNEL STAFF OFFICER

Course Number: 3OAR7311; OAR7311.

Location: 3380th Technical School, Keesler AFB, MS; 3320th Technical School, Amarillo AFB, TX.

Length: 4 weeks (120 hours).

Exhibit Dates: 9/67-12/73.

Objectives: To train personnel staff officers to manage personnel and to perform numerous personnel functions.

Instruction: Lectures and practical exercises in personnel management. Topics include human relations and management; personnel data systems; planning and programming; performance evaluation systems; and military-related personnel subjects.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in personnel management (12/68).

AF-1406-0032

MAJOR COMMAND (MAJCOM)
MANPOWER PROCEDURES

Course Number: 2ASR73370-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 5 weeks (150 hours).

Exhibit Dates: 5/68-2/71.

Objectives: To train enlisted personnel as manpower specialists.

Instruction: Lectures and practical exercises in data code and allocation routines, basic authorization and unit control routines, balance routine, manpower reports, and inquiry routines.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in manpower management (12/68).

AF-1406-0033

PROFESSIONAL PERSONNEL MANAGEMENT

Course Number: LMDC 501.

Location: Leadership and Management Development Center, Air University, Maxwell AFB, AL.

Length: 6 weeks (204-248 hours).

Exhibit Dates: 6/66-1/88.

Objectives: To train senior personnel in advanced management techniques.

Instruction: Lectures and practical exercises in the skills necessary to manage and handle facets of personnel management. Course includes Department of Defense management environment, management processes, human relations, management systems and quantitative methods, and personnel processes.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in management, 3 in labor relations (2/74).

AF-1406-0034

ACADEMIC INSTRUCTOR

Course Number: None.

Location: Air University, Maxwell AFB, AL.

Length: *Version 1:* 5-6 weeks (200-240 hours). *Version 2:* 6 weeks (260 hours). *Version 3:* 6 weeks (260-264 hours).

Exhibit Dates: *Version 1:* 6/68-1/88. *Version 2:* 1/64-5/68. *Version 3:* 1/54-12/63.

Objectives: To train commissioned officers to improve their effectiveness as academic instructors.

Instruction: Lectures and practical exercises in the improvement of academic instruction techniques. Course includes educational foundations and philosophy, communication techniques, test and measurement, educational methodology, instructional technology, and instructional television.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in educational foundations and philosophy, 1 in communication techniques, 4 in educational methodology, 2 in instructional technology, 2 in tests and measurement, 3 in instructional television (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in educational foundations and philosophy, 1 in communication techniques, 4 in educational methodology,2 in instructional technology, 2 in tests and measurements, 3 in instructional television (7/74); in the upper-division baccalaureate category, 3 semester hours in instructional methods (12/68). *Version 2:* In the vocational certificate category, 2 semester hours in educational foundations and philosophy, 1 in communication techniques, 1 in tests and measurements, 5 in educational methodology, 2 in instructional technology, 3 in instructional television (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in educational foundations and philosophy, 1 in communication techniques, 1 in tests and measurement, 5 in educational methodology, 2 in instructional technology, 3 in instructional television (7/74); in the upper-division baccalaureate category, 3 semester hours in instructional methods (12/68). *Version 3:* In the vocational certificate category, 2 semester hours in educational foundations and philosophy, 1 in communication and techniques, 1 in tests and measurement, 5 in educational methodology, 2 in instructional technology (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in educational foundations and philosophy, 1 in communication techniques, 1 in tests and measurement, 5 in educational methodology, 2 in instructional technology (7/74); in the upper-division baccalaureate category, 3 semester hours in instructional methods (12/68).

AF-1406-0035

MANPOWER MANAGEMENT OFFICER

Course Number: OL7331.

Location: 3310th Technical School, Scott AFB, IL.

Length: 7 weeks (210 hours).

Exhibit Dates: 12/54-12/68.

Objectives: To train selected officers and civilians to perform as manpower managers.

Instruction: Lectures and practical exercises in the duties of a manpower manager. Course includes manpower management and program planning; conference leadership; executive development and human relations; work simplification and measurement, production planning and industrial organization; mission organization analysis and management review; and manning procedures and classification and assignment of military personnel.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in manpower management methods (12/68).

AF-1406-0036

PERSONNEL OFFICER

Course Number: *Version 1:* 3OBR7321. *Version 2:* OBR7321-1. *Version 3:* OBR7321. *Version 4:* OBR7321. *Version 5:* OB7321. *Version 6:* OB7321.

Location: *Version 1:* 3380th Technical School, Keesler AFB, MS. *Version 2:* 3320th Technical School, Amarillo AFB, TX. *Version 3:* 3505th Technical School, Greenville AFB, MS. *Version 4:* 3505th Technical School, Greenville AFB, MS. *Version 5:* 3275th Technical School, Lackland AFB, TX. *Version 6:* 3310th Technical School, Scott AFB, IL.

Length: *Version 1:* 8 weeks (228 hours). *Version 2:* 8-9 weeks (240-264 hours). *Version 3:* 12 weeks (360 hours). *Version 4:* 8-9 weeks (240-270 hours). *Version 5:* 12-15 weeks (360-450 hours). *Version 6:* 12-15 weeks (360-450 hours).

Exhibit Dates: *Version 1:* 3/71-12/73. *Version 2:* 7/65-2/71. *Version 3:* 9/63-6/65. *Version 4:* 7/61-8/63. *Version 5:* 6/54-6/61. *Version 6:* 6/54-6/61.

Objectives: To train officers as personnel officers.

Instruction: *All Versions:* Lectures and practical exercises in supervising and coordinating the classification and assignment of military and civilian personnel, including personnel fundamentals and procedures. *Version 1:* Topics include personnel data systems; career control; quality control; and processing section, personal affairs section and administration. *Version 2:* Topics include career control and administration, quality control, and data control and personal affairs. *Version 3:* Topics include personal affairs fundamentals and procedures, and personnel administration and data systems. *Version 5:* Topics include personnel administration and control methods. *Version 6:* Topics include personnel administration and control methods.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in personnel administration (8/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in personnel classification (12/68). *Version 3:* In the upper-division baccalaureate category, 6 semester hours in personnel classification (12/68). *Version 4:* In the upper-division baccalaureate category, 4 semester hours in personnel classification (12/68). *Version 5:* In the upper-division baccalaureate category, 6 semester hours in personnel classification (12/68). *Version 6:* In the upper-division baccalaureate category, 6 semester hours in personnel classification (12/68).

AF-1406-0037

RECRUITING OFFICER

Course Number: 3OZR0902.

Location: School of Applied Aerospace Sciences, Lackland AFB, TX.

Length: 3 weeks (90-118 hours).

Exhibit Dates: 4/73-12/73.

Objectives: To train selected commissioned officers to manage recruiting activities.

Instruction: Lectures and practical exercises in the management of recruiting activities. Course includes salesmanship, sales management, sales training, and sales promotion.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in salesmanship (8/74).

AF-1406-0038

AIR NATIONAL GUARD RECRUITER

Course Number: 3AZR99120-2.

Location: School of Applied Aerospace Sciences, Lackland AFB, TX.

Length: 4 weeks (120 hours).

Exhibit Dates: 1/73-12/73.

Objectives: To train commissioned and noncommissioned officers to recruit personnel for the armed services.

Instruction: Lectures and practical exercises in the recruitment of personnel into the armed services. Course includes speech fundamentals; sales fundamentals; practice selling; community relations; advertising and publicity; eligibility requirements; and processing and classification.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in salesmanship (8/74).

1. ATC INSTRUCTOR TRAINING
   (ATC Instructor Training (Navigator))
2. ATC INSTRUCTOR TRAINING
   (NAVIGATOR)
3. ATC INSTRUCTOR TRAINING
   (NAVIGATOR)
   (Navigator Instructor Training)
   (Instructor Training for Aircraft Observer)

Course Number: *Version 1:* B-V7D-A. *Version 2:* B-V7D-A. *Version 3:* 753101-N; 753100; 51-33.

Location: Air Training Command, Mather AFB, CA. *Version 3:* Air Training Command, Scott AFB, IL.

Length: *Version 1:* 10-14 weeks (261-403 hours). *Version 2:* 8 weeks (95 hours). *Version 3:* 5-6 weeks (104-200 hours).

Exhibit Dates: *Version 1:* 5/74-1/88. *Version 2:* 8/70-4/74. *Version 3:* 1/51-7/70.

Objectives: To train enlisted personnel to perform the duties of flight trainer and academic instructor in a navigator training program.

Instruction: Lectures and practical exercises in the duties of an instructor in a navigator flight training program. Course includes psychology of learning, oral and written communications techniques, evaluation and measurement of student achievement, instructional technology, and practice teaching.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in instructional methods *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in instructional methods and/or technology, 1 in observation and methods (7/74); in the upper-division baccalaureate category, 3 semester hours in instructional methods and/or instructional technology, 1 in observation and methods (7/74). *Version 3:* In the lower-division baccalaureate/associate degree category, 3 semester hours in instructional methods and/or technology, 1 in observation and methods (7/74); in the upper-division baccalaureate category, 2 semester hours in instructor training (12/68).

AF-1406-0040

PERSONNEL TECHNICIAN

Course Number: AAR73270-1; AAR73270; AA73270.

Location: *Version 1:* 3320th Technical School, Amarillo AFB, TX. *Version 2:* 3505th Technical School, Greenville AFB, MS. *Version 3:* 3275th Technical School, Lackland AFB, TX. *Version 4:* 3310th Technical School, Scott AFB, IL.

Length: 8-11 weeks (240-330 hours).

Exhibit Dates: 9/54-12/68.

Objectives: To train enlisted personnel as personnel administration technicians.

Instruction: Lectures and practical exercises in personnel administration, including interviewing and counseling techniques, job analysis, personnel testing, classification and assignment of officer and enlisted personnel, military records, personnel actions, personnel evaluation, pay and benefits, accounting, and personnel data system.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in personnel classification (12/68).

AF-1406-0041

ATC Instructor Training

Course Number: S-V8D-A.

Location: Air Training Command, Randolph AFB, TX.

Length: 3-4 weeks (96-98 hours).

Exhibit Dates: 1/75-1/88.

Objectives: To train technically qualified personnel to teach and supervise the instruction of academic and technical subjects.

Instruction: Lectures and practical exercises in course curriculum development; psychology of learning; communications; methods and techniques of instruction; practice teaching; and techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in teacher education (6/75); in the upper-division baccalaureate category, 2 semester hours in teacher education (6/75).

AF-1406-0043

Personnel Technician by Correspondence

Course Number: 73270.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/83-4/87.

Objectives: To provide specialty training in the management of personnel control systems.

Instruction: This course is designed to provide personnel technicians with an overview of a personnel data system and its interface with the organization's computer system, with assessment techniques for selection, and with procedures for maximizing personnel utilization including placement, advancement, transfer, and separation.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in personnel management or human resource management (10/85).

AF-1406-0044

Personnel Specialist by Correspondence

Course Number: 73250.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 10/88-Present. *Version 2:* 2/82-9/88.

Objectives: To train personnel technicians in the basic areas of human resource management and to familiarize them with the policies and procedures relating to evaluation, placement and movement of personnel.

Instruction: The course addresses the duties and responsibilities of the personnel technician in the areas of interviewing, position classification, auditing of personnel records and reports, career motivation counseling, data collection, and the conducting of occupational surveys.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in personnel administration or human resource management (10/85).

AF-1406-0045

Administration Specialist by Correspondence

Course Number: 70250.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/85-Present.

Learning Outcomes: Upon completion of this course the student will have knowledge of the flow of communications in administration offices, administration correspondence, documentation, word processing and records management.

Instruction: Topics included in this course are objectives of publications management, freedom of information act, administrative correspondence, preparation of performance reports, documentation, word processing, records, and forms management, preparing publications and distributing administrative communications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in business communications (2/87).

AF-1406-0046

Administration Technician by Correspondence

Course Number: 70270.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/85-Present.

Learning Outcomes: Upon completion of this course the student will have knowledge of the communications process, the flow of communications, administrative correspondence, documentation, word processing and records management.

Instruction: Topics in this course include objectives of publications management, administrative correspondence, preparation of performance reports, documentation, word processing, records management and distributing administrative communications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in business communications (2/87).

AF-1406-0047

Legal Services Specialist by Correspondence

Course Number: 70550.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/86-Present.

Learning Outcomes: Upon completion of this course the student will have knowledge of legal office administration and management, legal reserach, claims procedures, the tort claims act and claims investigations.

Instruction: Topics in this course include legal office administration and management, military justice administration, automated military justice analysis and management systems, claims procedures, federal tort act and property damage tort claims.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in business management (2/87).

AF-1406-0048

Career Advisory Specialist by Correspondence

Course Number: 73234.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 11/88-Present. *Version 2:* 9/85-11/88.

Learning Outcomes: At the conclusion of this course the student will know the duties of the career advisor, know the re-enlistment and bonus programs, know the interview techniques to optimize retention, and become aware of the various publicity and advertising programs.

Instruction: This course covers the specialized area of the recruitment and retention of Air Force personnel. Instruction includes the role of the career advising specialist, Air Force re-enlistment options and the various retention techniques, publicity and advertising programs used by the Air Force.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 1 semester hour in personnel supervision (2/87).

AF-1406-0049

Personal Affairs Specialist by Correspondence

Course Number: 73251.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/84-Present.

Learning Outcomes: At the conclusion of this course the student will understand the benefits, support services, and various aid groups in order to assist and advise Air Force personnel in their personal affairs; and understand the duties and responsibilities of a supervisor.

Instruction: This course covers the benefit programs, support services and various assistance groups available to Air Force personnel concerning their personal affairs. AF-1406-0061

Fighter Weapons Instructor A-10

Course Number: A10001DOPN.

Location: Fighter Weapons School, Nellis Air Force Base, NV.

Length: *Version 1:* 14 weeks (439-464 hours). *Version 2:* 12-13 weeks (387 hours). *Version 3:* 15 weeks (378 hours).

Exhibit Dates: *Version 1:* 7/4-Present. *Version 2:* 6/82-6/84. *Version 3:* 6/79-5/82.

Learning Outcomes: Upon completion of the course, the student will be able to design and participate in instructional programs for aircrew members relating to the function and capabilities of the A-10 aircraft and its systems. The student evaluates systems and advises regarding deficiencies, including such areas as application and maintenance; participates in and monitors training programs. Develop skills in communication and instructional areas.

Instruction: This course is specifically designed to provide the experienced Air Force pilot with a comprehensive pattern of academic study, independent research and appropriate laboratory activity (flight) in the A-10 weapons system. Major segments of this course address the technical subjects of aerodynamics/performance and avionics/electronics. In addition, a comprehensive treatment of teaching techniques and methodology as related to the presentation of technical data is included.

Credit Recommendation: *Version 1:* In the graduate degree category, 3 semester hours in applied aerodynamics in high performance aircraft, 3 in advanced avionics/electronics, and 2 in instructional methodology (5/89). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in applied aerodynamics in high performance aircraft, 3 in advanced avionics/electronics, and 2 in instructional methodology (5/89). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in applied aerodynamics in high performance aircraft and 1 in instructional methodology (5/89).

AF-1406-0062

Fighter Weapons Instructor - Air Weapons Controller

Course Number: 1745IDWN.

Location: Fighter Weapons School, Nellis Air Force Base, NV.

Length: *Version 1:* 14 weeks (277 hours). *Version 2:* 11 weeks (289 hours).

Exhibit Dates: *Version 1:* 6/86-Present. *Version 2:* 7/84-5/86.

Learning Outcomes: Upon completion of the course, the student will be able to instruct radar theory and systems for F-15 and F-16 aircraft plus AWACS, ground TACS radar and HORAD radar systems. Student will be able to apply and integrate all radar systems specified in the course.

Instruction: The course consists of classroom lectures, hand-ons application of radar scopes in a laboratory situation, student independent research leading to a paper and presentation in appropriate radar systems with teaching techniques and methodology of these subjects. Information systems management approach is stressed throughout the course.

Credit Recommendation: *Version 1:* In the graduate degree category, 5 semester hours in information systems and 2 in instructional methodology (9/87). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in instructional methodology and 2 in information systems (9/87).

AF-1406-0064

Fighter Weapons Instructor F-16

Course Number: F1600I0DPN.

Location: Fighter Weapons School, Nellis Air Force Base, NV.

Length: 15 weeks (487 hours).

Exhibit Dates: 2/84-Present.

Learning Outcomes: Upon completion of the course, the student will be able to instruct aerodynamics, aircraft systems and avionics/electronics as they apply to the F-16 aircraft.

Instruction: The course consists of classroom lectures, in-flight laboratories and independent student research into all aspects of the F-16 aircraft. Particular emphasis is directed at the study of aerodynamics, advanced systems and avionics/electronics as they apply to the operational mission of the F-16 aircraft. Teaching techniques and methodology, as they relate to the subjects listed above, are developed throughout the course.

Credit Recommendation: In the graduate degree category, 3 semester hours in applied aerodyamics in high performance aircraft, 3 in advanced aircraft systems and components, 3 in advanced avionics/electronics, and 2 in instructional methodology (3/89).

AF-1406-0065

Adversary Tactics Instructor (AFSC K1115H)

Course Number: F50000A1AN.

Location: Fighter Weapons School, Nellis Air Force Base, NV.

Length: *Version 1:* 13-15 weeks (532 hours). *Version 2:* 13-15 weeks (402 hours).

Exhibit Dates: *Version 1:* 9/81-Present. *Version 2:* 8/79-8/81.

Learning Outcomes: Upon completion of the course, the student will be able to function as a USAF aggressor pilot. This assignment will require providing academic instruction on and airborn emulation of enemy tactical fighter pilots, aircraft avionics, weapons, formations, tactics and employment philosophy.

Instruction: This course has been developed to present an advanced program including academic and laboratory experience (flight) to a select group of Air Force pilots. The curriculum includes specialized work in applied aerodynamics/performance and aircraft systems and components that are readily equated to university topics. Class sizes are very small and the level of support, both staff and facilities, is very high. It is well to note that appreciable emphasis is placed on the comparison between U.S. and foreign equipment, systems and philosophy.

Credit Recommendation: *Version 1:* In the graduate degree category, 3 semester hours in applied aerodynamics in high performance aircraft and 2 in advanced aircraft systems. *Version 2:* In the upper-division baccalaureate category, 3 semester hours in applied aerodynamics in high performance aircraft and 2 in advanced aircraft systems and components (9/87).

AF-1406-0066

Fighter Weapons Instructor F-15

Course Number: F1500IDOPN.

Location: Fighter Weapons School, Nellis Air Force Base, NV.

Length: 15 weeks (409-423 hours).

Exhibit Dates: 8/83-Present.

Learning Outcomes: Upon completion of the course, the student will be able to instruct aerodynamics, aircraft systems, and avionics/electronics as they apply to the F-15 aircraft.

Instruction: The course consists of classroom lectures, in-flight laboratories and independent student research into all aspects of the F-15 aircraft. Particular emphasis is directed at the study of aerodynamics, advanced systems and avionics/electronics as they apply to the operational mission of the F-15 aircraft. Teaching techniques and methodology, as they relate to the subjects listed above, are developed throughout the course.

Credit Recommendation: In the graduate degree category, 3 semester hours in applied aerodynamics in high performance aircraft, 3 in advanced aircraft systems and components, 3 in advanced avionics/electronics, and 2 in instructional methodology (6/89).

AF-1406-0067

Adversary Tactics Instructor (AFSC K1745)

Course Number: 174501AA.

Location: Fighter Weapons School, Nellis Air Force Base, NV.
Length: 10 weeks (196-206 hours).
Exhibit Dates: 7/82-Present.
Learning Outcomes: Upon completion of the course, the student will be able to provide academic instruction on radar theory and aircraft control and communications.
Instruction: The course consists of classroom lectures and student independent research leading to a paper and presentation in appropriate radar systems. Information systems management approach is stressed throughout the course.
Credit Recommendation: In the graduate degree category, 3 semester hours in information systems (6/89).

AF-1406-0068

Tactical Air Command and Control Specialist by Correspondence

Course Number: 27550.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 12/83-Present.
Learning Outcomes: Upon completion of the course, the student will be familiar with personnel supervision techniques appropriate to the management of any organization. Skills are included in the use and application of radio equipment as well as weather reporting. The graduate will have an understanding of the infrastructure between the tactical air control system and the U.S. Army Structure and can function at a entry management level.
Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content areas have been costructed to provide study in the broad area of responsibility encompassed by the tactical air command and control specialist - Basic management techniques such as employee relations, conflict solving and performance evaluation. In addition, publications and communications as well as safety are included. Basic radio communication theory, field utilization and military systems comprise a portion of the required study. Specific military topics relate to tatical air control, surface navigation (compass/map), Russian political philosophy and specialized equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in personnel supervison management and 1 in radio communication (12/89).

AF-1406-0069

Education Specialist by Correspondence

Course Number: 75150.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/84-Present.
Learning Outcomes: Upon completion of the course, the student will understand the various programs of education available in the Air Force and provide advisement and counseling services in the area of education.
Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Course covers the Air Force Education Services Program to include education assistance programs, Veteran Administration educational allowances, and Air Force preparatory programs. Testing and test security is addressed, as well as educational advisement and counseling. Finally, basic education office administration practices are studied.
Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in educational counseling (12/89).

AF-1406-0070

Training Technician by Correspondence

Course Number: 75172.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 12/83-Present.
Learning Outcomes: Upon completion of the course, the student will be able to develop an instrumental system and operate and manage a formal training program with no supervision.
Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content includes fundamentals of instruction, conduct of training, training aids and equipment, and evaluation and measurement.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in educational system/program development (12/89).

AF-1406-0071

Training Specialist by Correspondence

Course Number: 75132.
Location: Extension Course Institute, Gunter AFS, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 1/85-Present.
Learning Outcomes: Upon completion of the course, the student will be able to support the establishment and maintenance of a training program for a work unit related to a job location or class environment.
Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content includes role of on-the-job training, management and control for on-the-job training, administration and supervisory responsibilities pertaining to training programs, fundamentals of instruction, instructional techniques, training aids and materials, and tests and measurement.
Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in principles of instruction (12/89).

AF-1406-0072

Training Systems Technician by Correspondence

Course Number: 75171.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/87-Present.
Learning Outcomes: Upon completion of the course, the student will understand theory of instruction and instructional system development and apply that understanding in the establishment and management of an effective on-the-job training program.
Instruction: This course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content areas include instructional theory, application of instructional system development principles, establishment control and operation of a visable on-the-job training program and related administrative tasks are included.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours for field training program development (12/89).

AF-1406-0094

Medical Materiel Specialist by Correspondence

Course Number: 91550.
Location: Extension Course Institute, Gunter AFS, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 9/86-Present.
Learning Outcomes: Upon completion of the course the student will be able to describe the general duties of the medical materiel management specialist.
Instruction: Monitored home study including readings, written exercises, on-the-job supervision, and proctored examinations. Topics include regulations, computerization, basic first aid, record keeping, control, requisitions, warehouse operation, stock rotation, excess management, financial management, and bio-medical equipment repair.
Credit Recommendation: In the vocational certificate category, 6 semester hours in central supply technology (5/88).

AF-1408-0002

Financial Administration

Course Number: 3OAR6711.
Location: 3750th Technical School, Sheppard AFB, TX.
Length: 11 weeks (342 hours).
Exhibit Dates: 1/72-12/73.
Objectives: To train career officers and key civilian personnel for positions in financial administration.
Instruction: Lectures on management theory, planning, programming, and budgeting systems; quantitative analysis techniques; resource management accounting systems; and automated systems.
Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in financial administration (2/74).

AF-1408-0003

Defense Contract Pricing Techniques

Course Number: 142.
Location: School of Systems and Logistics, Wright-Patterson AFB, OH.
Length: 4 weeks (120 hours).
Exhibit Dates: 9/71-6/74.
Objectives: To provide selected military and civilian personnel with the analytical tools and techniques required to apply economics and statistics to cost-price problems in procurement.
Instruction: Lectures on quantitative review; cost/volume/profit analysis; cost element analysis; make or buy determinations; profit analysis; contract pricing arrangements.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in business economics (12/68).

AF-1408-0004

Professional Military Comptroller

Course Number: LMDC 400.

Location: Leadership and Management Development Center, Air University, Maxwell AFB, AL.

Length: *Version 1:* 8 weeks (233 hours). *Version 2:* 9 weeks (360 hours).

Exhibit Dates: *Version 1:* 9/72–1/90. *Version 2:* 1/68–8/72.

Objectives: To train officers to serve as comptrollers or resource managers.

Instruction: Lectures, seminars and case studies in economics, finance, managerial accounting, human relations, computer management including theories and concepts relating to research techniques, executive expression, quantitative methods and resource management. Programs include individual research and application of computer techniques in the subject areas.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 19 semester hours in business administration (2/74); in the graduate degree category, 3 semester hours in organizational management, 3 in financial and economic analysis (4/76). *Version 2:* In the upper-division baccalaureate category, 5 semester hours in business administration (2/74).

AF-1408-0006

Maintenance Engineering Production Analysis
(Maintenance Analysis)

Course Number: 3OZR4344; OZR4344; XX4344.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 6–8 weeks (180–228 hours).

Exhibit Dates: 3/58–12/68.

Objectives: To train officers and civilians in the techniques of maintenance data analysis.

Instruction: Lectures on the function and responsibilities of maintenance staff activities, statistical methods, data systems, data processing, and analytical methods.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in statistical analysis (12/68).

AF-1408-0007

Maintenance Engineering Production Analysis

Course Number: AZR45170.

Location: Technical Training Center, Chanute AFB, IL.

Length: 6 weeks (180 hours).

Exhibit Dates: 3/60–12/68.

Objectives: To train airmen to work with statistical methods in the analysis of maintenance production data.

Instruction: Lectures on practical mathematics and statistics, control charts and standards, and analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in statistical analysis (12/68).

AF-1408-0008

Defense Advance Procurement Pricing

Course Number: 145.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 3 weeks (102 hours).

Exhibit Dates: 12/68–6/74.

Objectives: To train officers and civilian personnel to serve as cost estimators and price analysts.

Instruction: Practical exercises in quantitative methods, including risk and financial analysis; index numbers; parametric, direct, and indirect cost models; and forecasting techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in quantitative methods (2/74).

AF-1408-0009

1. Management Analysis Specialist
2. Management Analysis Specialist
3. Management Analysis Technician

Course Number: *Version 1:* 3ABR69130. *Version 2:* 3ALR69130. *Version 3:* ALR68330; AZR68370.

Location: School of Applied Aerospace Sciences, Sheppard AFB, TX; 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 10–11 weeks (300–342 hours). *Version 2:* 10 weeks (300 hours). *Version 3:* 9–10 weeks (270–300 hours).

Exhibit Dates: *Version 1:* 2/70–12/73. *Version 2:* 3/68–1/70. *Version 3:* 9/63–2/68.

Objectives: To provide enlisted personnel with basic training in management analysis.

Instruction: Lectures and practical exercises in management concepts and techniques, including program, progress, mission, statistical, and financial analysis, and application of analytical methods to decisive areas.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in basic statistics, 2 in applied statistical analysis (2/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in basic statistics, 2 in financial analysis, 2 in applied management analysis (12/68). *Version 3:* In the upper-division baccalaureate category, 1 semester hour in oral/written communication, 5 in financial analysis, 3 in applied management analysis (12/68).

AF-1408-0010

Quantitative Methods for Advanced Procurement Pricing

Course Number: 144.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/73–6/74.

Objectives: To provide experienced procurement officers with advanced training in applied statistical analysis.

Instruction: Lectures in statistical analysis as applied to advanced procurement-pricing techniques, including fundamentals of computer programming, systems analysis, sampling techniques, curvilinear regression and multiple regression analysis, and statistics and mathematics review.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in applied statistics (2/74); in the upper-division baccalaureate category, 1 semester hour in applied statistics (2/74).

AF-1408-0011

Defense Weapons Systems Management

Course Number: None.

Location: Air Force Institute of Technology, Wright-Patterson AFB, OH.

Length: 10 weeks (250 hours).

Exhibit Dates: 1/64–6/71.

Objectives: To provide senior military and civilian personnel with knowledge of the concepts and activities involved in the design, engineering, acquisition, and support of major weapon systems.

Instruction: Lectures on the functions of national defense weapon systems; planning for system design, selection, and acquisition; contract definition and procurement policies; and management of acquisition and support, including design control, engineering, testing, production, logistics and support services, contract administration, and cost measurement and control.

Credit Recommendation: In the upper-division baccalaureate category, 9 semester hours in business administration (12/68).

AF-1408-0012

Management Engineering Specialist

Course Number: *Version 1:* 3ALR73331. *Version 2:* ALR73331.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 8–10 weeks (240–288 hours). *Version 2:* 8 weeks (240 hours).

Exhibit Dates: *Version 1:* 5/68–12/73. *Version 2:* 12/63–4/68.

Objectives: To train enlisted personnel as management engineering specialists.

Instruction: Lectures in mathematics, statistics, automatic data processing, queuing theory, motion study and time study, work sampling and simplification procedures, human relations, and correlation and regression analysis.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 5 semester hours in industrial management (2/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hour in statistics (12/68).

AF-1408-0013

Maintenance Management and Information Systems

Course Number: 210.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 3 weeks (104–120 hours).

Exhibit Dates: 4/69–6/74.

Objectives: To provide maintenance managers with supplementary training in maintenance management and information systems.

Instruction: Lectures and practical exercises in maintenance management and information systems, including maintenance policies and requirements, management concepts and research procedures, maintenance management information systems, financial management systems, data processing and computer logic, and quantity theory.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68).

AF-1408-0014

Production Management II
(Advanced Production Management)

Course Number: 279.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 3 weeks (157 hours).

Exhibit Dates: 12/69–6/74.

Objectives: To provide production personnel with advanced training in defense production management.

Instruction: Lectures and seminars in principles of production management, production technology, procurement, problem and decision analysis techniques, and analysis of current management policy.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in production management (2/74); in the upper-division baccalaureate category, 2 semester hours in production management (2/74).

AF-1408-0015

STATISTICAL SERVICES SUPERVISOR

Course Number: AA68170; 83170.

Location: 3750th Technical School, Sheppard AFB, TX; 3415th Technical School, Lowry AFB, CO.

Length: 10–12 weeks (300 hours).

Exhibit Dates: 12/53–12/68.

Objectives: To train airmen in the organization, management, and supervision of statistical services activities.

Instruction: Lectures and practical exercises in an introduction to statistical services, methods of statistical analysis and presentation, personnel reporting, and material and operational statistics.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in business organization/statistical analysis (12/54).

AF-1408-0016

ADVANCED COST AND ECONOMIC ANALYSIS

Course Number: 191.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 4–7 weeks (117–120 hours).

Exhibit Dates: 3/69–6/74.

Objectives: To provide experienced cost analysts with specialized training in advanced economic analysis.

Instruction: Lectures and practical exercises in mathematics and statistics, use of regression and regression models, aircraft systems cost estimation, sensitivity analysis, problems of airlift and sealift, and cost effectiveness techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in cost analysis (2/74); in the upper-division baccalaureate category, 2 In the upper-division baccalaureate category, 2 semester hours in cost analysis (12/68).

AF-1408-0017

BUDGET SPECIALIST

Course Number: *Version 1:* 3ALR67230. *Version 2:* ALR67230; AZR67152.

Location: *Version 1:* School of Applied Aerospace Sciences, Sheppard AFB, TX. 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 8 weeks (228–240 hours). *Version 2:* 8 weeks (240 hours).

Exhibit Dates: *Version 1:* 5/71–12/73. *Version 2:* 2/64–4/71.

Objectives: To train airmen in budgeting, financial planning, and financial management for Air Force personnel.

Instruction: Lectures and practical exercises in the fundamentals of Air Force budgeting, principles and procedures of budget administration, developing estimates of requirements, and preparation of operating budgets and financial plans.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in budgeting and financial administration (2/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in finance and budget planning (12/68).

AF-1408-0018

DISBURSING SUPERVISOR

Course Number: AA81170.

Location: 3415th Technical Training Center, Lowry AFB, CO.

Length: 13 weeks (390 hours).

Exhibit Dates: 3/54–12/68.

Objectives: To train enlisted personnel to supervise disbursing activities.

Instruction: Lectures in the duties of a disbursing supervisor. Course includes introduction to disbursing, military pay, travel allowances, commercial accounts, accounting for public funds, and financial office management.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in general business practice (12/68).

AF-1408-0019

DISBURSING CLERK

Course Number: AB81130.

Location: 3415th Technical Training Group, Lowry AFB, CO.

Length: 10 weeks (300 hours).

Exhibit Dates: 3/54–12/54.

Objectives: To train enlisted personnel in disbursing and accounting procedures.

Instruction: Lectures in the duties of a disbursing clerk. Course includes introduction to disbursing, military pay, travel allowances, commercial accounts, accounting for public funds, and financial office management.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in general business practice (12/68).

AF-1408-0021

FINANCIAL SERVICES SPECIALIST BY CORRESPONDENCE

Course Number: 67252.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/84–5/87.

Objectives: To train the student to complete basic, standardized compensation statements and reports.

Instruction: This course prepares the student to complete both military and civilian compensation statements and reports in the areas of travel, leave, retirement, pensions, and insurance, to manipulate such statements and reports so as to interface with automated compensation systems, and to be familiar with control procedures for the disbursement of cash and negotiable instruments.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in introduction to finance or principles of finance (10/85).

AF-1408-0023

PERSONNEL SERVICES OFFICER

Course Number: OB7341.

Location: 3310th Technical School, Scott AFB, IL.

Length: 6 weeks (180 hours).

Exhibit Dates: 6/55–12/68.

Objectives: To train officers to manage personnel services activities for Air Force personnel and their dependents.

Instruction: Lectures and laboratories in personnel management, including human relations, vocational and educational guidance, personal affairs activities, character guidance, community services, and dependents education; and the personnel services organization, including funds, supplies, communications, and entertainment and recreational activities and facilities.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in applied sociology (12/68).

AF-1408-0024

EXECUTIVE ENGINEERING

Course Number: None.

Location: Civil Engineering School, Wright-Patterson AFB, OH.

Length: 3 weeks (115 hours).

Exhibit Dates: 2/73–6/74.

Objectives: To provide officers and civilian personnel with advanced training in civil engineering management.

Instruction: Lectures on motivational theory; communication; economics; leadership dynamics and creativity; and organizing, planning, and decision-making techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in management (2/74).

AF-1408-0025

ADVANCED SYSTEMS BUYING

Course Number: 172.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 4 weeks (160 hours).

Exhibit Dates: 1/69–6/74.

Objectives: To teach officers and civilian personnel the basic principles of procurement management.

Instruction: Lectures in the principles of procurement management, including Army project procurement; economics; cost estimating, programming, scheduling, and controlling defense systems procurement; and leadership, decision-making, and communication techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in industrial procurement (2/74).

AF-1408-0028

ADVANCED PERSONNEL OFFICER

Course Number: OA7311.

Location: 3310th Technical School, Scott AFB, IL.

Length: 8 weeks (240 hours).

Exhibit Dates: 10/54–12/68.

Objectives: To provide officers with advanced training in personnel administration.

Instruction: Lectures on human relations, oral and written communications, and personnel management, including evaluation, training, separations, promotions, classifications, interviewing, and counseling.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in personnel classification (12/54).

AF-1408-0032

MAINTENANCE SCHEDULING SPECIALIST

Course Number: 3ALR43330; ALR43330.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 8–10 weeks (240–288 hours).

Exhibit Dates: 11/63–4/70.

Objectives: To train airmen in the maintenance management functions of planning, scheduling, and controlling.

Instruction: Lectures and practical exercises in maintenance control mathematics; data systems and reports; forecasting operational support requirements and projecting capabilities; shop scheduling; controlling workload requirements; aerospace vehicle and equipment status reporting; and maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in maintenance management (12/68).

AF-1408-0033

Contract Administration

Course Number: *Version 1:* 3AZR65170-2. *Version 2:* 3AZR65170-2; 3AZR65170-6. *Version 3:* AZR65170-3.

Location: *Version 1:* 3415th Technical School, Lowry AFB, CO. *Version 2:* 3415th Technical School, Lowry AFB, CO. *Version 3:* 3320th Technical School, Amarillo AFB, TX.

Length: *Version 1:* 5-6 weeks (150-184 hours). *Version 2:* 4-5 weeks (120-150 hours). *Version 3:* 5 weeks (150 hours).

Exhibit Dates: *Version 1:* 3/71-12/73. *Version 2:* 7/68-2/71. *Version 3:* 3/66-6/68.

Objectives: To provide procurement personnel with advanced training in the principles and practices of government contracting and contract administration.

Instruction: Lectures on principles of government contracting, basis for administration, contract administration procedures, contract cost principles and procedures, and tools of administration.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in principles of contracting (2/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in principles of contracting(12/68). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in principles of contracting (12/68).

AF-1408-0034

Procurement Supervisor

Course Number: 3AAR65170-1; AAR65170.

Location: School of Applied Aerospace Science, Lowry AFB, CO; 3415th Technical School, Amarillo AFB, TX; 3320th Technical School, Amarillo AFB, TX.

Length: 6-7 weeks (180-206 hours).

Exhibit Dates: 2/62-12/73.

Objectives: To train first-line supervisors and technicians to conduct and supervise procurement operations.

Instruction: Practical experience in contract administration, advertising, personnel planning and scheduling, and technical procurement performance.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in procurement policies (12/68).

AF-1408-0035

Work Control Specialist

Course Number: ALR55630.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 5 weeks (150 hours).

Exhibit Dates: 8/65-12/68.

Objectives: To train enlisted personnel to perform as work control specialists.

Instruction: Lectures and practical exercises in supervision and management of work control centers; planning and scheduling procedures; publications and forms; preventive maintenance; service calls; and planning of annual maintenance and repair programs.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68).

AF-1408-0037

Contract Management

Course Number: 3OZR6531-2.

Location: Technical Training Center, Lowry AFB, CO.

Length: 3 weeks (90 hours).

Exhibit Dates: 6/69-12/73.

Objectives: To provide defense personnel with knowledge and understanding of the principles of defense contract management.

Instruction: Lectures on contract administration, development engineering, quality assurance, property administration, and production and pricing.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in contract management (2/74).

AF-1408-0038

Financial Management Supervisor by Correspondence

Course Number: 67273.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/84-10/87.

Objectives: Provides an overview of the financial management function with emphasis on the determination of compensation levels, and the establishment and monitoring of control systems.

Instruction: This course prepares the student to oversee and administer accounting and budget systems in the areas of material control, accounts control, distribution of compensation (including automated pay systems), and supplemental compensation systems such as insurance pensions.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in financial accounting, 3 hours in managerial accounting (10/85).

Related Occupation Codes: 85/10.

AF-1408-0039

Advanced Contract Administration

Course Number: 178.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 2-3 weeks (60-128 hours).

Exhibit Dates: 1/69-6/74.

Objectives: To provide procurement management personnel with advanced training in defense contract administration.

Instruction: Lectures and seminars in advanced defense contract administration, including contractor technical and financial capability review and analysis, contractor performance evaluation, data management, accounting systems, performance, and progress management tools, and basic managerial principles and techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in contract management (12/68).

AF-1408-0040

Basic Orientation Course for Officers of the Medical Service

Course Number: OBM0104.

Location: Medical Service School, Gunter AFB, AL; School of Aviation Medicine, Gunter AFB, AL.

Length: 3-4 weeks (110-175 hours).

Exhibit Dates: 9/55-12/68.

Objectives: To train newly commissioned officers to serve as personnel administrators in Air Force medical facilities.

Instruction: Lectures and practical exercises in medical and personnel administration; nursing services; organization of USAF medical services; disaster, nuclear, preventive, and occupational medicine; and dental services.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in medical administration (12/68).

AF-1408-0042

Contract Law

Course Number: 3AZR65170-5.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 3 weeks (90 hours).

Exhibit Dates: 7/69-12/73.

Objectives: To provide procurement personnel with advanced training in legal principles related to government contracts.

Instruction: Lectures on contract law; labor law; law of agencies; governmental procurement, methods and procedures; disputes and remedies; and terminations.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in business law/contracts (2/74).

AF-1408-0043

Medical Administrative Supervisor

Course Number: *Version 1:* 3AAR90670-1. *Version 2:* AAR90670-1. *Version 3:* AAR90670. *Version 4:* AA90670.

Location: *Version 1:* Technical Training Center, Sheppard AFB, TX. *Version 2:* Medical Service School, Sheppard AFB, TX. *Version 3:* Medical Service School, Gunter AFB, AL. *Version 4:* School of Aviation Medicine, Gunter AFB, AL.

Length: *Version 1:* 6 weeks (180 hours). *Version 2:* 6 weeks (180 hours). *Version 3:* 8 weeks (287-289 hours). *Version 4:* 12 weeks (468 hours).

Exhibit Dates: *Version 1:* 2/71-12/73. *Version 2:* 7/67-1/71. *Version 3:* 1/62-6/67. *Version 4:* 6/55-12/61.

Objectives: To provide airmen with supervisory-level training in medical administration.

Instruction: Lectures on the planning and scheduling of administrative work in medical services activities, supervision of medical administrative personnel, conducting on-the-job training for medical administrative personnel, and the performance of technical, medical administrative functions.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in hospital and/or business administration (2/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in medical administration (12/68). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in medical administration (12/68). *Version 4:* In the upper-division baccalaureate category, 5 semester hours in medical administration (12/68).

AF-1408-0044

Weather Chief Observer

Course Number: 3AZR25271.

Location: *Version 1:* School of Applied Aerospace Sciences, Chanute AFB, IL. *Version 2:* 3345th Technical School, Chanute AFB, IL.

Length: 6-7 weeks (210-280 hours).

Exhibit Dates: 7/72-12/73.

Objectives: To qualify airmen with prior training to perform as weather chief observers.

Instruction: Lectures and practical exercises in weather observation and station administration, including management of observation functions, weather radar scope camera, radar observation, supervision of weather equipment and communications functions, and driver training.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in management (5/74).

AF-1408-0048

Communications-Electronics Staff Officer

(Communications-Electronics Officer)

Course Number: OAR3011; OA3011.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 25-34 weeks (870-1292 hours).

Exhibit Dates: 1/56-12/68.

Objectives: To train officers to operate and monitor communications-electronics programs and to formulate policies and procedures.

Instruction: Lectures and seminars in radioelectronics, staff management, wire and multiplexing systems, automatic data systems, supply and maintenance techniques, tactical and electronic warfare equipment, air defense systems, management principles, leadership, logistics management, communications techniques, and human relations.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in management principles, 3 in radio engineering (12/68).

AF-1408-0049

Aircraft/Avionics Maintenance Staff Officer

(Avionics Staff Officer)

Course Number: 3OAR4000; 3OAR3211.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 5-7 weeks (168-210 hours).

Exhibit Dates: 2/70-12/73.

Objectives: To train commissioned officers to supervise aircraft and avionics maintenance units and armament control and support units.

Instruction: Lectures and practical exercises in management principles, effective communication, logistics, resource management, systems development, and management informational systems.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in principles of management (6/74).

AF-1408-0051

Contract Management Officer

Course Number: 3OBR6531-4.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO; 3415th Technical School, Lowry AFB, CO.

Length: 6-9 weeks (180-270 hours).

Exhibit Dates: 4/70-12/73.

Objectives: To train officers to perform as contract managers.

Instruction: Lectures and practical exercises in contract management. Course includes fundamentals of procurement and production, contract administrative responsibilities, development engineering, quality assurance procedures, production planning, evaluation of work statements, contractor's proposals in support of system procurement, and industrial preparedness planning.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in contract management or purchasing (6/74).

AF-1408-0052

Contract Management Officer

Course Number: 3OZR6531-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 3 weeks (90 hours).

Exhibit Dates: 7/70-12/73.

Objectives: To train personnel to serve as contract managers.

Instruction: Lectures and practical exercises in contract management. Course includes introduction to contract management, plant office contract management mission and organization, contract administration, development engineering, quality assurance administration, production and property administration, systems procurement support and negotiation, contract control system, and measurement and test critique.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in contract management (6/74).

AF-1408-0053

General Accounting Specialist by Correspondence

(Financial Management Specialist by Correspondence)

Course Number: 67251.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/83-5/87.

Objectives: To train the student to complete basic, standardized accounting statements and reports, and to understand the basis of an accounting control system.

Instruction: This course prepares the student to complete and interpret accounting statements and reports in the areas of material control and accounts control, and to manipulate such statements and reports so as to interface with automated accounting systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in general accounting or introductory accounting (10/85).

AF-1408-0057

Procurement and Production Officer Fundamentals

Course Number: 3OQR6500.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 6 weeks (180 hours).

Exhibit Dates: 6/69-12/73.

Objectives: To train enlisted personnel in procurement and production policies and procedures.

Instruction: Lectures and practical exercises in procurement and production policies and procedures. Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/83–Present.

Learning Outcomes: Upon completion of the course, the student will be able to comprehend contract pricing, pricing analysis and price systems, negotiate with cost proposals and analysis with pricing for profit or use, and comprehend facilities capital investments in relation to pricing of products and services as a part of total cost.

Instruction: Covers contract pricing, mathematics of pricing, cost-volume profit analysis, price analysis, cost proposals, comparison techniques, experience curve, direct and indirect cost analysis, capital investment considerations, profit motives and analysis, negotiating processes and documentation.

Credit Recommendation: In the vocational certificate category, 1 semester hour in applied mathematics and 1 in retailing (pricing); in the lower-division baccalaureate/associate degree category, 2 semester hours in business mathematics and 2 in marketing (2/87).

AF-1408-0092

Budget by Correspondence

Course Number: 6701.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84–Present.

Learning Outcomes: Upon completion of the course, the student will be able to know the budgetary process of the Air Force, understand the concepts of fund accounting, budgeting and financial management, be able to identify and complete the various Air Force forms related to the budgeting and accounting cycle.

Instruction: Instruction includes the basic concept and principles of governmental/fund accouting, budgeting, and financial management. Also covered are the specific Air Force regulations and instructions on how to complete the various Air Force forms in these functions.

Credit Recommendation: In the vocational certificate category, 1 semester hour in bookkeeping; in the lower-division baccalaureate/associate degree category, 1 semester hour in fund accounting and 1 semester hour in budgeting (2/87).

AF-1408-0093

Resource Advisor by Correspondence

Course Number: 6702.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/86–Present.

Learning Outcomes: At the conclusion of this course the student will have a basic understanding of the budgeting and fund control processes within the Air Force, have a working knowledge of financial planning concepts, be able to identify various forms related to the functions of budgeting and fund control.

Instruction: This course offers an overview of fund accounting, budgeting, and financial planning in the Air Force. Also covered are some of the specific forms and procedures related to these functions in the Air Force.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in fund accounting, 1 in financial planning, and 1 in budgeting (2/87).

AF-1408-0095

Operations Resource Management by Correspondence

Course Number: 27152.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to work with no direct supervision the majority of the time and assist in training of subordinates. An ability to monitor and audit aircrew data will have been achieved. Flight management policies and programs will be understood and the student will be able to retrieve, summarize and analyze data to facilitate decision making on the part of supervisory staff.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content includes a review of basic math with introduction to statistical methods. Data processing is covered to a base level of understanding and application. Emphasis is on administrative record keeping pertaining to flight operations and training.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 2 semester hours in records and information management (12/89).

AF-1408-0096

ELECTRICAL POWER PRODUCTION TECHNICIAN BY CORRESPONDENCE

Course Number: 54272A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to supervise an electrical power production organization shop.

Instruction: Work shop management, electrical and electronic principles, operation of generation switchgear and electronic test equipment, and how to troubleshoot electrical switchgear, portable generators and automatic transfer panels.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in maintenance management, 1 in principles fo supervision and 1 in electrical/electronic fundamentals (12/89).

1. AIR COMMAND AND STAFF COLLEGE
2. AIR COMMAND AND STAFF COLLEGE
3. AIR COMMAND AND STAFF COLLEGE
4. AIR COMMAND AND STAFF COLLEGE
5. COMMAND AND STAFF COLLEGE (Command and Staff School)
6. COMMAND AND STAFF COURSE

Course Number: None.

Location: Air University, Maxwell AFB, AL.

Length: *Version 1:* 40 weeks (731 hours). *Version 2:* 40 weeks (746–898 hours) *Version 3:* 40 weeks (1600 hours). *Version 4:* 39–40 weeks (1579–1860 hours). *Version 5:* 38–39 weeks. *Version 6:* 43 weeks (1280 hours).

Exhibit Dates: *Version 1:* 9/90–Present. *Version 2:* 1/79–8/90. *Version 3:* 8/70–12/78. *Version 4:* 8/62–7/70. *Version 5:* 8/55–7/62. *Version 6:* 7/54–7/55.

Objectives: To train officers in the factors affecting national behavior and policy formation, in military management processes, and in military subjects, including employment of aerospace power.

Instruction: *Version 2:* Lectures, seminars, readings, experiential exercises and student research in national security studies, strategic theory, the history and theory of various kinds of war, international and regional studies, and management including organizational behavior, leadership, communication, human resource management and management systems. *Version 3:* Lectures, seminars, readings, and student research in the factors affecting national behavior and policy formation, in military management processes, and in military subjects including the employment of aerospace power. *Version 4:* Lectures, seminars, readings, and student research in the factors affecting national behavior and policy formation, in military management processes, and in military subjects including the employment of aerospace power. *Version 5:* Lectures, seminars, reading, and student research in the factors affecting national behavior and policy formation, in military management processes, and in military subjects including the employment of aerospace power. *Version 6:* Lectures, seminars, reading, and student research in factors affecting national behavior and policyformation, in military management processes, and in military subjects, subjects including the employment of aerospace power.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the upper-division baccalaureate category, 15 semester hours in international relations,national security studies, political science and economics, 12 in management including management systems, leadership, communication, and human resource management, 3 in research methods (3/83); in the graduate degree category, 9 semester hours in international relations and national security studies, 6 in management systems, leadership, communication, and human resource management, 3 in organizational behavior (3/83). *Version 3:* In the upper-division baccalaureate category, 30 semester hours (to be apportioned by the receiving institution) in the areas of international relations, political science, economics, management, and research (8/74); in the graduate degree category, 3 semester hours in international relations, 3 in management, 0–6 in research, 3 in international relations electives, 3 in management electives. NOTE: Credit granted for thesis should be contingent on the graduate school's evaluation of the research paper. *Version 4:* In the upper-division baccalaureate category, 6 semester hours in business organization and management, 2 in political science, 3 in international relations, and credit in written and oral communication on the basis of institutional evaluation (8/74); in the graduate degree category, 0–6 semester hours in public administration or in the field of thesis (8/74). NOTE: Credit granted for thesis should be contingent on the graduate school's evaluation of the research paper. *Version 5:* In the upper-division baccalaureate category, 6 semester hours in business organization and management, 2 in political science, 3 in international relations, and credit in written and oral communication on the basis of institutional evaluation (12/68). *Version 6:* In the upper-division baccalaureate category, 6 semester hours in business organization and management, 3 in political science and international relations (12/68).

AF-1511-0002

AIR COMMAND AND STAFF NONRESIDENT SEMINAR PROGRAM

(Air Command and Staff Associate Program)

Course Number: None.

Location: Air Command and Staff College, Maxwell AFB, AL.

Length: *Version 1:* Maximum of 116 weeks, average 52 weeks. *Version 2:* 104 weeks.

Exhibit Dates: *Version 1:* 1/79–Present. *Version 2:* 8/70–12/78.

Objectives: To teach officers national and international factors influencing U.S. security policy and free world stability, and the factors influencing the development and use of military forces in the support of national security policy.

Instruction: *Version 1:* Seminars and readings in international relations including principles and patterns of interstate relations, regional studies, and military history; national security studies; communication; and public administration including leadership, supervision, personnel and labor relations, financial management, resource management, the budgetary process and decision-making techniques. *Version 2:* Seminars, readings, and student research in national and international factors influencing U.S. security policy and free world stability, and in the factors influencing the development and use of military forces in the support of national security policy.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 9 semester hours in international relations, 6 in public administration, 3 in communication, 6 in national security studies (3/83); in the graduate degree category, for students who have completed the program with a rating of Outstanding or Excellent, 4 in international relations, 2 in introduction to public administration (3/83). It is suggested that an institution delay awarding credit until the student has successfully completed one semester of graduate work. *Version 2:* In the upper-division baccalaureate category, 24 semester hours in the areas of social science and personnel management (8/74); in the graduate degree category, for students who have completed the program with a rating of Outstanding or Excellent, 4 semester hours in international relations, 2 in personnel management (8/74). It is suggested that an institution delay awarding credit until the student has successfully completed one semester of graduate work. This course is offered at various locations under the administration of the Air University, Maxwell AFB. Distribution of course materials and the transcript service are handled by the Extension Course Institute (ECI).

AF-1511-0003

AIR COMMAND AND STAFF CORRESPONDENCE PROGRAM

(Air Command and Staff Associate Correspondence Program)

Course Number: None.

Location: Air Command and Staff College, Maxwell AFB, AL.

Length: 104 weeks maximum.

Exhibit Dates: *Version 1:* 1/79–Present. *Version 2:* 8/70–12/78.

Objectives: To teach officers the factors affecting the national behavior and policy formation, military management processes, and military subjects, including employment of aerospace power.

Instruction: *Version 1:* Readings in international relations including principles and patterns of interstate relations, regional studies, and military history; national security studies; communication; and public administration including leadership, supervision, personnel and labor relations, financial management, resource management, the budgetary process, and decision-making techniques. *Version 2:* Individualized readings and student research in factors affecting national behavior and policy formation, in military management processes, and in military subjects including employment of aerospace power. The correspondence program is based on but not identical to the resident course (AF-1511-0001) and is divided into four course blocks: Military Environment, Command and Management, and Military Employment, Part I and Part II.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in international relations, 4 in public administration, 2 in communications, 3 in national security studies (3/83). *Version 2:* In the upper-division baccalaureate category, 15 semester hours in social sciences and personnel management (8/74); in the graduate degree category, for students who have completed the program with a rating of Satisfactory, 3 semester hours in international relations (8/74). NOTE: It is suggested that an institution delay awarding graduate credit until the student has successfully completed one semester of graduate work.

This course is offered at various locations under the administration of the Air University, Maxwell Air Force Base. Distribution of course materials and the transcript service is handled by the Extension Course Institute (ECI).

AF-1511-0004

Air War College Nonresident Seminar Program
(Associate Air War College Nonresident Seminar Program)

Course Number: None.

Location: Air War College, Maxwell AFB, AL.

Length: 104 weeks maximum.

Exhibit Dates: *Version 1:* 1/79–Present. *Version 1:* 8/70–12/79.

Objectives: To train officers in the principles of military strategy and national security policy for development and employment of aerospace power.

Instruction: *Version 1:* Seminars, reading, and student research in principles of military strategy and national security policy for development and employment of aerospace and power, including nature of national power and its application in nation-state systems; changing nature of U.S. society and its interrelationship with national security; regional studies with an assessment of the impact of regional development in U.S. foreign and national security policy; determinants of U.S. national security policy; formulation and implementation of the policies; allocation and management of defense resources, military and personnel management and decision-making; impact of science and technology on weapon systems, military concepts, doctrine, and strategy; causes, nature, and purposes of armed conflict; U.S. military concepts and strategy, and processes by which they are formulated and implemented; role of deterrence, arms control, and other strategies for achieving and maintaining international order and stability; development and evaluation of aerospace concepts for national security; and evaluation of present and potential strategies, capabilities, and vulnerabilities of the U.S., its allies, and potentially hostile countries. *Version 2:* Seminars, readings, and student research in principles of military strategy and national security policy for development and employment of aerospace power, including nature of national power and its application in the nation-state system; changing nature of U.S. society and its interrelationship with national security; current and potential threats to U.S. security; determinants of U.S. national security policy; formulation and implementation of the policies; allocation and management of defense resources; military management and decision-making; impact of science and technology on weapon systems, military concepts, doctrine, and strategy; causes, nature, and purposes of armed conflict; U.S. military concepts and strategy, and processes by which they are formulated and implemented; role of deterrence, arms control, and other strategies for achieving and maintaining international order and stability; development and evaluation of aerospace concepts for national security; and evaluation of present and potential strategies, capabilities, and vulnerabilities of the U.S., its allies, and potentially hostile countries.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 24 semester hours in the areas of political science, international relations, and public administration (3/83); in the graduate degree category, for students who have completed the program with a rating of Outstanding or Excellent, 0-6 semester hours in international relations may be granted, however it is suggested that an institution delay awarding graduate credit until the student has successfully completed one semester of graduate work. This course is offered at many locations under the administration of Maxwell AFB.(3/83). *Version 2:* In the upper-division baccalaureate category, 24 semester hours in the areas of political science, international relations and government, and personnel management (8/74); in the graduate degree category, for students who have completed the program with a rating of Outstanding or Excellent, 4 semester hours in international relations, 2 in personnel management (8/74). NOTE: It is suggested that an institution delay awarding graduate credit until the student has successfully completed one semester of graduate work. This course is offered at various locations under the administration of Air War College, Maxwell Air Force Base. Distribution of course materials and the transcript service are handled by the Extension Course Institute (ECI).

AF-1511-0005

Air War College Correspondence Program
(Air War College Associate Correspondence Program)

Course Number: None.

Location: Air War College, Maxwell AFB, AL.

Length: Average 52 weeks with 104 weeks maximum.

Exhibit Dates: *Version 1:* 1/79–Present. *Version 2:* 8/70–12/78.

Objectives: To train senior officers in principles of military strategy and national security policy for development and employment of aerospace power.

Instruction: *Version 1:* Individualized reading and student research in principles of military strategy for national security policy for development and employment of aerospace power, including nature of national power and its applications in the nation-state system; changing nature of U.S. society and its interrelatonships with national security, current and potential threats to U.S. security; regional studies with an assessment of the impact of regional developments in U.S. foreign and national security policy, determinants of U.S. national security policy, formulaton and implementation of the policies; allocation and managment of defense resources; military and personnel management and decision-making; impact of science and technology on weapon systems, military concepts, doctrines and strategy; causes, nature, and purposes of armed conflict; U.S. military concepts and strategies, and processes by which they are formulated and implemented; role of deterrence, arms control, and other stragegies for acheiving and maintaining international order and stability; development and evaluation of aerospace concepts for national security; and evaluation of present and potential strategies, capabilities, and vulnerabilities of the U.S., its allies, and potentially hostile countries. *Version 2:* Seminars and individualized readings and student research in principles of military strategy for national security policy for development and employment of aerospace power, including nature of national power and its application in the nation-state systems; changing nature of U.S. society and its interrelationships with national security; current and potential threats to U.S. security; determinants of U.S. national security policy, formulation and implementation of the policies; allocation and management of defense resources; military management and decision-making; impact of science and technology on weapon systems, military concepts, doctrine, and strategy; causes, nature, and purposes of armed conflict; U.S. military concepts and strategies, and processes by which they are formulated and implemented; role of deterrence, arms control, and other strategies for achieving and maintaining international order and stability; development and evaluation of aerospace concepts for national security; and evaluation of present and potential strategies, capabilities, and vulnerabilities of the U.S., its allies, and potentially hostile countries.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 24 semester hours in the aread of political science, international relations, and public administration (3/83); in the graduate degree category, 0–6 hours in international relations may be granted to those students who have completed the program with a rating of Outstanding or Excellent. However, it is suggested that an institution delay awarding graduate credit until the students has successfully completed one semester of graduate work. The course is administered by Maxwell Air Force Base through the Extension Course Institute (3/83). *Version 2:* In the upper-division baccalaureate category, 24 semester hours in the areas of political science, international relations and government, and personnel management (8/74); in the graduate degree category, for students who have completed the program with a rating of Outstanding or Excellent, 4 semester hours in international relations, 2 in personnel management (8/74). NOTE: It is suggested that an institution delay awarding graduate credit until the student has successfully completed one semester of graduate work. This course is offered at various locations under the administration of Air War College, Maxwell Air Force Base. Distribution of course materials and the transcript service is handled by the Extension Course Institute (ECI).

1. Air War College
2. Air War College
3. Air War College
4. Air War College
5. Air War College
(War College)

Course Number: None.

Location: Air University, Maxwell AFB, AL.

Length: *Version 1:* 40 weeks (1600 hours). *Version 2:* 40 weeks (1600 hours). *Version 3:* 43 weeks (1076-1600 hours). *Version 4:* 43 weeks (1586-1608 hours). *Version 5:* 43 weeks (1575-1618 hours).

Exhibit Dates: *Version 1:* 1/79-Present. *Version 2:* 8/70-12/78. *Version 3:* 8/66–7/70. *Version 4:* 8/63–7/66. *Version 5:* 7/54–7/63.

Objectives: To train senior officers in military strategy in support of national security policy for the development and employment of aerospace power.

Instruction: *Version 1:* Seminars, individualized readings, experiential exercises and student research in principles of military strategy and national security policy for development and employment of aerospace power, including nature of national power and its application in nation-state system; current and potential threats to U.S.security; historical evolution of strategic theory and national security; regional studies with an assessment of the impact of regional developments in U.S. foreign and national policy; determinants of U.S. national security policy; formulation and implementation of the policies; allocation and management of defense resources; military personnel management and decision-making; impact of science and technology on weapon systems, military concepts, doctrine and strategy; causes, nature and purposes of armed conflict; U.S. military concepts and strategy, and processes by which they are formulated and implemented; role of deterrence, arms control, and other strategies for acheiving and maintaining international order and stability; development and evaluatin of aerospace concepts for national security; and evaluation of present and potential strategies, capabilities, and vulnerabilities of the U.S., its allies, and potentially hostile countries. *Version 2:* Lectures, readings, and student research and discussion in military strategy in support of national security policy for the development and employment of aerospace power. *Version 3:* Lectures, readings, and student research and discussion in military strategy in support of national security policy for the development and employment of aerospace power. *Version 4:* Lectures, readings, and student research and discussion in military strategy in support of national security policy for the development and employment of aerospace power. *Version 5:* Lectures, readings, and student research and discussion in military strategy in support of national security policy for the development and employment of aerospace power.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 32 semester hours in international relations, political science, national security studies, public management and research (3/83); in the graduate degree category, 12 semester hours in international relations and national security studies, 4 in management with emphasis on the public sector, credit in research based on the receiving institution's review of significant research paper and, in addition, up to 3 semester hours for completion of the electives based on the receiving institution's review of the course (3/83). *Version 2:* In the upper-division baccalaureate category, 30 semester hours (to be distributed by the receiving institution) in the areas of international relations, political science, economics, management, and research (8/74); in the graduate degree category, 6 semester hours in international relations, 6 in management, 0–6 in research training; additionally, 3 semester hours of graduate credit may be granted for completion of any two of the following elective courses: History of Military Thought, The Soviet Union, Communist China, Politics and Government of Emerging Nations, Economics of National Defense, Human Relations in Administration, and Quantitative Analysis (8/74). NOTE: Credit recommendation is based on an on-site evaluation. Credit granted for research papers should be contingent upon the graduate school's evaluation of the thesis. Recommendations are maximum figures. The amount actually accepted for transfer depends upon the applicant's future academic goals and the regulations of the admitting institution on transfer credit. *Version 3:* In the upper-division baccalaureate category, 6 semester hours in political science (including international relations), 9 in business organization and management (planning and leadership), 3 in social science survey, and credit in oral and written communications on the basis of institutional evaluation (8/74); in the graduate degree category, 6 semester hours in a one-year M.A. program in the field of international relations or in the field of thesis research (8/74). NOTE: Credit granted for theses should be contingent upon the graduate school's evaluation of the research paper for an indication of the extent and depth of the student's reading, seminar, and research work during the course of instruction. *Version 4:* In the upper-division baccalaureate category, 6 semester hours in social science survey, 6 in political science (including international relations), 3 in recent history, 3 in economics, 3 in business organization and management (planning and leadership), and credit in oral and written communication on the basis of institutional evaluation (12/68). *Version 5:* In the upper-division baccalaureate category, 6 semester hours in social science survey, 6 in political science (including international relations), 3 in recent history, 3 in economics, 3 in business organization and management (planning and leadership) (12/68).

AF-1511-0007

Civil Law by Correspondence

Course Number: 7802A.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/79–Present.

Learning Outcomes: Upon completion of the course, the student will be able to understand and describe the basic principles of administrative, martial, and civil law as applicable to the Air Force.

Instruction: Monitored home study including readings, written exercises, and proctored examination in the application of civil law within the US Air Force. Topics include Air Force administrative law, interrelationships between the Department of Defense, the armed services departments, and other governmental agencies status of officers, warrant officers and enlisted personnel, legal aspects of military pay and allowances, martial law, international law and treaties as they apply to the armed forces.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in political science or government (5/88).

AF-1512-0002

Military Training Instructor

Course Number: *Version 1:* 3AIR99128. *Version 2:* 3AIR99128. *Version 3:* AIR99128.

Location: *Version 1.* School of Military Sciences, Airman, Lackland AFB, TX. *Version 2:* 3720th Base Military School, Lackland AFB, TX. *Version 3:* 3275th Technical School, Lackland AFB, TX.

Length: *Version 1:* 9 weeks (320 hours). *Version 2:* 4–9 weeks (200–320 hours). *Version 3:* 5 weeks (138 hours).

Exhibit Dates: *Version 1:* 7/73–12/73. *Version 2:* 12/67–6/73. *Version 3:* 2/62–11/67.

Objectives: To train selected enlisted personnel to perform as military training instructors with minimum on-the-job training.

Instruction: *All Versions:* Lectures and practical exercises in the principles, mehtods, and techniques of instruction; identification of trainee emotional, mental and drug problems; evaluation procedures; and drill and ceremonies. *Version 1:* Topics include counseling techniques.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in educational psychology and 3 in instructional methods (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in instructional methods (7/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in instructional methods (12/68).

AF-1512-0003

Drug Education and Counseling

Course Number: 3OZR0008.

Location: Lackland Technical Training Center, Lackland AFB, TX.

Length: 4 weeks (160 hours).

Exhibit Dates: 6/72–12/73.

Objectives: To train selected officers and enlisted personnel to perform drug education and counseling duties at military installations.

Instruction: Lectures and practical exercises in drug education and counseling duties. Topics include history and scope of the drug problem; pharmacological, psychological, cultural, and legal aspects of drug useage; approaches to counseling and treatment; military policies and directives; program and community resources and constructive alternatives; educational and rehabilitative program models; local program development; communication techniques; program and resource evaluation; and follow-up training.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in psychology or group dynamics, 2 in introduction to drug and alcohol abuse, and 3 in drug abuse program development and evaluation (8/74).

AF-1513-0001

Human Relations Advisor

Course Number: 2OSR0009.

Location: Lackland Technical Training Center, Lackland AFB, TX.

Length: 2 weeks (60 hours).

Exhibit Dates: 5/72–12/73.

Objectives: To train officers and airmen as human relations advisors.

Instruction: Lectures and practical exercises in the duties of installation human relations advisors, including design, development, conduct, and evaluation of human relations program; cultural imprint awareness; cross-cultural differences and difficulties; psychology of prejudice; sociology of ethnic groups; educational models; counseling and arbitration; and the dynamics of group processes.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in cultural sociology (7/74).

AF-1601-0001

Production Control

Course Number: ALR45130; AL45130; AL80270.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 12–14 weeks (360–420 hours).

Exhibit Dates: 10/54–12/68.

Objectives: To train personnel in the production control functions of aircraft maintenance, motor vehicle maintenance, ground equipment maintenance, installations engineering maintenance, and depot maintenance.

Instruction: Discussions and practical exercises in production control theory, functions, and mathematics; estimating theory and techniques; maintenance production analysis; and scheduling theory and techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in business organization and management (12/68).

AF-1601-0006

1. Liquid Fuel Systems Maintenance Specialist (Conventional Fuel)
2. Liquid Fuel Systems Maintenance Specialist (Conventional Fuel)
3. Petroleum Systems Maintenance Specialist

Course Number: *Version 1:* 3ABR54630-1; 3ABR54630. *Version 2:* ABR54630; ABR54630W; ABR56830A. *Version 3:* AB56830.

Location: *Version 1:* School for Applied Aerospace Sciences, Chanute AFB, IL; *Version 1:* 3345th Technical School, Chanute AFB, IL. *Version 2:* 3320th Technical School, Amarillo AFB, TX. *Version 3:* 3320th Technical School, Amarillo AFB, TX.

Length: *Version 1:* 7-9 weeks (216-240 hours). *Version 2:* 7-8 weeks (180 hours). *Version 3:* 10 weeks (240 hours).

Exhibit Dates: *Version 1:* 10/69-12/73. *Version 2:* 10/60-9/69. *Version 3:* 6/58-9/60.

Objectives: To teach fundamentals of hydraulics.

Instruction: Lectures and practical exercises in fundamentals of basic hydraulics and electricity, fabrication of piping and tubing assemblies, repair and maintenance of hydraulic component parts, and industrial safety in handling high-pressure liquids.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in applied hydraulics, mechanical systems, and/or fluid power, 1 in industrial safety (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in applied hydraulics, mechanical systems, and/or fluid power, 1 in industrial safety (7/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in applied hydraulics, mechanical systems, and/or fluid power, 1 in industrial safety (7/74).

AF-1601-0022

Applied Engineering

Course Number: None.

Location: Air Force Institute of Technology, Wright-Patterson AFB, OH.

Length: 9 weeks (296 hours).

Exhibit Dates: 6/72-6/74.

Objectives: To train architects and engineers to apply current mechanical and electrical engineering technology to Real Property facilities.

Instruction: Lectures and practical exercises in the application of current mechanical and electrical engineering technology, including psychrometrics, air conditioning load calculations, piping and duct design, mechanical equipment selection and application, system controls, wiring and lighting design, power factor correction, corrosion technology, and integrated design planning and execution.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in applied mechanical, electrical, and corrosion engineering (6/74).

AF-1601-0023

Industrial Engineering Techniques

Course Number: None.

Location: Air Force Institute of Technology, Wright-Patterson AFB, OH.

Length: 5 weeks (200 hours).

Exhibit Dates: 5/73-6/74.

Objectives: To train personnel in industrial engineering technology.

Instruction: Lectures and practical exercises in industrial engineering technology, including mathematics, fundamentals of statistics, work design, work measurement, plant layout, engineering economy, network planning, and other topics of current interest.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in algebra, 2 in statistics, and 1 in industrial engineering (6/74); in the upper-division baccalaureate category, 1 semester hour in statistics, 1 in industrial engineering (6/74).

AF-1601-0024

Cartographic Officer

Course Number: 5OBO5724.

Location: Aeronautical Chart and Information Center, St. Louis, MO.

Length: 26 weeks (1040 hours).

Exhibit Dates: 3/70-6/85.

Objectives: To train officers as cartographic officers.

Instruction: Lectures and practical exercises in duties of cartographic officers, including geodesy, surveying, referencing systems, geodetic evaluation, compilation research, compilation techniques optics, photometrics, photographic-cartographic interpretation, radial triangulation, photographic rectification, mosaics, photogrammetric instrumentation, celestial mechanics, computer applications, analytic photogrammetry, and methods of map and chart design and construction.

Credit Recommendation: In the upper-division baccalaureate category, 22 semester hours in cartography (7/74).

AF-1601-0025

Building Systems Engineering

Course Number: None.

Location: Civil Engineering School, Wright-Patterson AFB, OH.

Length: 3 weeks (120 hours).

Exhibit Dates: 4/73-6/74.

Objectives: To train engineers to apply current technology and techniques to the design, construction, and maintenance of building components.

Instruction: Lectures and practical exercises in the application of current technology to the design, construction, and maintenance of building components, including life-cycle evaluation, economic analysis, material-component selection and replacement, and the roof, protective coating, thermal and vapor barrier, sealant, acoustical, and fire protection subsystems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in civil engineering and building construction (7/74); in the upper-division baccalaureate category, 3 semester hours in civil engineering and building construction (7/74).

AF-1601-0026

Photomapping

Course Number: None.

Location: Aeronautical Chart and Information Center, St. Louis, MO.

Length: 10 weeks (332 hours).

Exhibit Dates: 4/56-12/68.

Objectives: To train enlisted personnel to prepare maps and charts using photogrammetry.

Instruction: Lectures and practical exercises in the preparation of maps and charts, including introductory cartography, vertical and trimetrogon photogrammetry, and reproduction procedures.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in mapping and drafting (12/68).

AF-1601-0030

Liquid Fuel Systems Maintenance Specialist by Correspondence

Course Number: 54551.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/86-Present.

Objectives: To train individuals in the maintenance of liquid fuel distribution systems.

Instruction: Consists of on-the-job supervision and at-home study. The at-home study provides knowledge regarding fundamentals of fuel tank construction and tank entry procedures; operation and maintenance of mechanical systems components including valves, pumps, meters, and filtration equipment; and operation of hydrant systems and components. Automotive gasoline dispensing units, fuel charactertistics, hand tools, and safety procedures are also covered.

Credit Recommendation: In the vocational certificate category, 4 semester hours in liquid fuel systems, distribution and maintenance, and tank farm operations (9/86).

AF-1601-0032

1. Liquid Fuel Systems Maintenance Specialist (HGM-25)
2. Liquid Fuel Systems Maintenance Specialist (SM-68A)

Course Number: *All Versions:* ABR54630E.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 16 weeks (450 hours). *Version 2:* 8 weeks (240 hours).

Exhibit Dates: *Version 1:* 12/63-12/68. *Version 2:* 6/62-11/63.

Objectives: To train personnel as liquid fuel systems maintenance specialists for specific systems.

Instruction: *All Versions:* Lectures and practical exercises on duties of liquid fuel system maintenance specialists on specific weapon systems, including operation and maintenance of propellant transfer systems. *Version 1:* Topics include fundamentals, components, component cleaning and testing, component test stands, and operation and maintenance of aerospace ground equipment. *Version 2:* Topics include systems operation, and propellant system component maintenance.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in applied hydraulics or physical science (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in applied hydraulics or mechanical systems (7/74).

AF-1601-0041

Site Development Specialist

Course Number: *Version 1:* 3ABR55330. *Version 2:* 3ABR55330. *Version 3:* ABR55330.

Location: *Version 1:* School of Applied Aerospace Sciences, Sheppard AFB, TX. *Version 2:* 3750th Technical School, Sheppard AFB, TX. *Version 3:* 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 17 weeks (680 hours). *Version 2:* 18 weeks (540 hours). *Version 3:* 19 weeks (540 hours).

Exhibit Dates: *Version 1:* 7/73-12/73. *Version 2:* 9/70-6/73. *Version 3:* 10/65-8/70.

Objectives: To train personnel as site development specialists.

Instruction: *All Versions:* Lectures and practical exercises on the performance of site development specialists, including fundamentals of surveying, and construction surveys. *Version 1:* Topics include construction layout and earthwork, soils engineering, pavements and concrete construction, basic drafting, construction drafting, and drafting and construction management. *Version 2:* Topics include construction layout and earthwork, soils engineering, pavements and concrete construction, basic drafting, construction drafting, and drafting and construction management. *Version 3:* Topics include site plans, material estimates, and facility drawings; transit adjustments and readings; traverse computations and direct level circuit; road layout and utilities drainage; inspections; and civil engineering inspection responsibilities and management methods.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in drafting, 3 in surveying, and 3 in construction materials (7/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in construction engineering (12/68). *Version 3:* In the upper-division baccalaureate category, 6 semester hours in construction engineering (12/68).

AF-1601-0042

Intelligence Area Studies (SEA)

Course Number: 3OZR8045-5.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 3-4 weeks (102-120 hours).

Exhibit Dates: 5/68-12/73.

Objectives: To train personnel in intelligence area studies (Southeast Asia).

Instruction: Lectures and practical exercises in intelligence area studies (Southeast Asia), including physical and cultural patterns of the area and in the specific application of multisensor reconnaisance to that environment, geographical and sociological orientation to Southeast Asia, and fundamentals of multisensors, such as panoramic photography, infrared imagery, and side-looking-radar (SLR) imagery.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in engineering (7/74).

AF-1601-0044

Base Civil Engineer

(Basic Installations Engineering Officer)

Course Number: None.

Location: Institute of Technology, Wright-Patterson AFB, OH.

Length: 8-9 weeks (233-243 hours).

Exhibit Dates: 1/54-12/68.

Objectives: To train officers in civil engineering management.

Instruction: Lectures and practical exercises in civil engineering management, including functions of the Air Force civil engineer, supervisory management, real estate administration, fiscal budgeting, maintenance management and control, engineering contracts, installations planning and military construction programs, operations and maintenance programming and project methodologies, comprehensive problems, security indoctrination, arctic orientation and construction techniques, and nuclear effects and recovery planning.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in civil engineering management (8/74); in the upper-division baccalaureate category, 3 semester hours in business organization and management (12/68).

AF-1601-0045

Liquid Fuel Systems Maintenance Specialist, SM-65 and SM-68

Course Number: ABR56830B.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 16 weeks (450 hours).

Exhibit Dates: 12/60-12/68.

Objectives: To teach competence in the operation and maintenance of various cryogenic liquid and high pressure gas transfer systems.

Instruction: Lectures and practical exercises in cryogenic liquid and high pressure gas transfer systems; proper procedures to insure safety and efficiency in removing fuels from missiles; and cleaning, degreasing, and servicing propellant transfer systems.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in mechanical systems fluid power (7/74).

AF-1601-0046

Engineering Assistant Specialist by Correspondence

Course Number: 55350.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 8/86-Present.

Objectives: This course is intended to train individuals to be civil/construction engineering assistants.

Instruction: This correspondence course of instruction consists of on-the-job supervision and at home studies. The home study provides basic knowledge of applied mathematics, surveying, soils analysis and testing, pavement analysis and testing, drafting, and construction management. The course provides knowledge related to real estate property design, construction, maintenance and repair of civil engineering and construction projects and functions. Field inspection and management techniques are also covered. The course has a proctored final examination.

Credit Recommendation: In the vocational certificate category, 3 semester hours in applied technical mathematics (9/86); in the lower-division baccalaureate/associate degree category, 6 semester hours in basic surveying and/or construction surveying, 3 in soil analysis and testing, 3 in asphalt and concrete testing, 6 in engineering drafting and/or architectural drafting, and 3 in construction management (9/86).

AF-1601-0047

Pavements Maintenance Specialist by Correspondence

Course Number: 55150.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/80-Present.

Objectives: To train individuals to design, construct, and maintain concrete and bituminous pavements.

Instruction: Consists of on-the-job supervision and at-home study. The home study provides basic knowledge in the design, construction, and maintenance of concrete and bituminous pavements. Subgrade preparation, materials and design mixtures, placement of pavement, maintenance of functions, drainage structures, fencing, and prefabrication surface mats are covered in this course. Also covered are safety, management techniques, and general military contingency plans.

Credit Recommendation: In the vocational certificate category, 4 semester hours in highway design and maintenance (9/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in highway design and construction (9/86).

AF-1601-0048

Apprentice Pavements Maintenance Specialist by Correspondence

Course Number: 55130.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/85-Present.

Objectives: To train individuals to maintain rigid and flexible pavements.

Instruction: Consists of on-the-job supevision and at-home study. The home study provides basic knowledge in job safety and construction, and maintenance are covered. Flexible pavement, prefabricated surface mats, painting, fencing, and explosives are taught. Primary emphasis is on maintenance functions. Military contingency plans and operation are also covered.

Credit Recommendation: In the vocational certificate category, 4 semester hours in highway maintenance (9/86).

AF-1601-0049

Structural Technician by Correspondence

Course Number: 55271.

Location: Extension Course Institute, Gunter AIr Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 3/81-Present.

Objectives: To train personnel in th materials and methods used in building construction (light construction).

Instruction: This course consists of on-the-job training and at-home studies. The home study provides training in the materials and methods of building construction and the on-the-job training provides reinforcement for the home studies. The course contains materials used for light construction.

Credit Recommendation: In the vocational certificate category, 3 semester hours in materials of building construction and 3 in methods of light construction (9/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in materials and methods of building construction (light construction) (9/86).

AF-1606-0001

Naval Intelligence Officer

Course Number: 3OBR8051-3.

Location: Lowry Technical Training Center, Lowry AFB, CO.

Length: 21 weeks (650 hours).

Exhibit Dates: 7/72-12/73.

Objectives: To train selected Navy personnel in all aspects of intelligence operations, including analysis, collection, and reporting of information on foreign governments.

Instruction: Study and practical applications of naval warfare operations and intelligence support; international relations and law; terrain analysis; U.S. treaties and national commitments; national strategic planning; historical development and political-military role of communism.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in political science, 3 in international relations (2/74).

AF-1606-0003

UNDERGRADUATE PILOT TRAINING (T-41, INTERIM)

Course Number: P-V4B-T.

Location: Air Training Command, Columbus AFB, TX; Air Training Command, Craig AFB, TX; Air Training Command, Laredo AFB, TX; Air Training Command, Laughlin AFB, TX; Air Training Command, Moody AFB, TX; Air Training Command, Reese AFB, TX; Air Training Command, Vance AFB, OK; Air Training Command, Webb AFB, TX; Air Training Command, Williams AFB, TX.

Length: 5 weeks (92 hours).

Exhibit Dates: 11/72-1/90.

Objectives: To provide officers with basic flight training.

Instruction: Flight training and lectures on airmanship, aerospace physiology, and flight safety.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in flight fundamentals (2/74).

AF-1606-0011

INSTRUMENT PILOT INSTRUCTOR TRAINING (T-38)

(Instrument Pilot Instructor Training (T-39))

(Instrument Pilot Instructor Training (T-38/T-39))

Course Number: F-V5G-A; 1104500H; 1111501Q.

Location: Air Training Command, Randolph AFB, TX.

Length: 6-8 weeks (76-207 hours).

Exhibit Dates: 8/62-1/90.

Objectives: To qualify pilots as instrument instructor pilots.

Instruction: Lectures and practical exercises in instrument instruction procedures in supersonic fighter type jet aircraft, including fundamentals of instruction, flight instruments, navigation aids, computer, weather, and flying and ground training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in principles and methods of instruction or teacher education, 3 in flight instructor experience (2/74); in the upper-division baccalaureate category, credit in instructional methods on the basis of institutional evaluation (2/74).

AF-1606-0020

SPECIAL OPERATIONS TRAINING, AC-130E PILOTS

Course Number: 104140Z.

Location: 415th Special Operations Training Squadron, Hurlburt Field, FL.

Length: 4 weeks (94 hours).

Exhibit Dates: 1/72-1/90.

Objectives: To train pilots in the operation of multi-engine aircraft.

Instruction: Ground egress training and multi-engine flight experience; lectures on electrical systems, hydraulics, landing gear and brakes, flight controls, fuel systems, instrumentation, communication and navigation, performance and mission planning, and flight characteristics and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in flight experience (2/74).

AF-1606-0021

INTELLIGENCE OPERATIONS TECHNICIAN

Course Number: AA20470.

Location: 3750th Technical Training Wing, Sheppard AFB, TX.

Length: 10 weeks (300 hours).

Exhibit Dates: 6/57-5/59.

Objectives: To provide advanced instruction in intelligence and photointerpretation techniques and procedures.

Instruction: Course covers maps, charts, and mosaics; target development; weapons employment planning; foreign air defense capabilities; combat survival; combat mission planning; briefing, debriefing, and reporting. Course also includes fundamentals of air intelligence, photo radar, and target development.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in intelligence methods (11/77).

AF-1606-0022

1. UNDERGRADUATE PILOT TRAINING (T-41/T-37/T-38)
2. UNDERGRADUATE PILOT TRAINING (T-41/T-37/T-38)

   (Undergraduate Pilot Training (T-41/T-37/ T-33))

   (Undergraduate Pilot Training (T-37/T-33))

Course Number: *All Versions:* P-V4A-A. *Version 2:* 111103; 1111038.

Location: Air Training Command, Columbus AFB, MS; Air Training Command, Craig AFB, AL; Air Training Command, Laughlin AFB, TX; Air Training Command, Moody AFB, GA; Air Training Command, Reese AFB, TX; Air Training Command, Vance AFB, OK; Air Training Command, Webb AFB, TX; Air Training Command, Williams AFB, AZ; Air Training Command, Laredo AFB, TX; Air Training Command, Randolph AFB, TX.

Length: *Version 1:* 49 weeks (962-998 hours). *Version 2:* 48-55 weeks (752-1059 hours).

Exhibit Dates: *Version 1:* 6/73-1/90. *Version 2:* 1/61-5/73.

Objectives: To qualify non-rated officers as rated jet pilots.

Instruction: Lectures and practical exercises in basic flight maneuvers, instrument flight, navigation, weather, aerodynamics, aerospace physiology, aircraft systems operation, principles of flight, aural and visual code, flying safety, instrument procedures and radio aids, radar and flight planning.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in commercial pilot, 3 in instrument pilot, 3 in navigation, and 3 in meteorology (6/74). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in commercial pilot, 3 in instrument pilot, 3 in navigation, and 3 in meteorology (6/74); in the upper-division baccalaureate category, 3 semester hours in primary meteorology and navigation, and credit in advanced military at institutions which regularly offer such credit (12/68).

AF-1606-0023

C-5 PILOT

Course Number: None.

Location: 443d Military Airlift Wing, Altus AFB, OK.

Length: 4 weeks (127 hours).

Exhibit Dates: 2/72-1/90.

Objectives: To train pilots in the operation of the C-5 aircraft.

Instruction: Flight and academic training, including an introduction to the C-5 aircraft and its systems, component parts, and normal and emergency functions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in flight experience (2/74).

AF-1606-0030

AIRCRAFT OBSERVER TRAINING—PILOT

Course Number: 51-124101-1.

Location: Flying Training Air Force, James Connally AFB, TX.

Length: 24-27 weeks (387-413 hours).

Exhibit Dates: 4/54-12/68.

Objectives: To train qualified pilots as navigator/bombardiers.

Instruction: Lectures in dead-reckoning, celestial, grid, and radar navigation techniques; nuclear weapons delivery, bombing procedures, and radar target intelligence; and in-flight training in celestial, grid, and radar navigation and in integrated navigation and bombing.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in navigation (12/68).

AF-1606-0031

AIRCRAFT OBSERVER TECHNICAL UPGRADING

Course Number: 51-152110A-1.

Location: Flying Training Air Force, Mather AFB, CA; Flying Training Air Force, James Connally AFB, TX.

Length: 24-25 weeks (538-567 hours).

Exhibit Dates: 2/55-12/68.

Objectives: To train aircraft observers as aerial navigators.

Instruction: Lectures and flight experience in aircraft navigation techniques, including dead-reckoning, celestial, and grid navigation; equipment malfunction analysis; bombing theory and computations; radar target intelligence; operational procedures involving radar and computer usage; and atomic, biological, and chemical warfare familiarization.

Credit Recommendation: In the upper-division baccalaureate category, 5 semester hours in navigation, and credit in electricity on the basis of institutional evaluation (12/68).

AF-1606-0032

FLIGHT ENGINEER SPECIALIST, RECIPROCATING ENGINE AIRCRAFT

Course Number: 3ALR43550C-1.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 10 weeks (300 hours).

Exhibit Dates: 8/70-12/73.

Objectives: To train enlisted personnel to perform duties as flight engineers.

Instruction: Lectures in theory of flight, aircraft systems, aerodynamics, and duties and responsibilities of flight engineers; and practical experience in flight navigation procedures.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in aerodynamics (12/68).

AF-1606-0033

PRIMARY-BASIC OBSERVER UPGRADING

Course Number: *Version 1:* 51-153123. *Version 2:* 51-153102-1.

Location: *Version 1:* Air Training Command, Mather AFB, CA. *Version 2:* Flying Training Air Force, Ellington AFB, TX.

Length: *Version 1:* 23 weeks (511 hours). *Version 2:* 34 weeks (803-823 hours).

Exhibit Dates: *Version 1:* 1/59-12/68. *Version 2:* 12/54-12/58.

Objectives: To provide aircraft observers with supplemental training in aircraft navigation.

Instruction: Lectures and flight experience in aircraft navigation, including meteorology; navigational theory; dead-reckoning, celestial, and grid navigation; radar systems; electricity and magnetism; and radio operations.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in navigation (12/68). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in navigation, 3 in electricity (12/68).

AF-1606-0034

PRIMARY-BASIC OBSERVER CADET

Course Number: 51-153101-1.

Location: Flying Training Air Force, Ellington AFB, TX; Flying Training Air Force, Harlingen AFB, TX; Flying Training Air Force, James Connally AFB, TX.

Length: 40-42 weeks (857-872 hours).

Exhibit Dates: 4/54-12/68.

Objectives: To train aircraft observer preflight graduates and nonrated officers to perform as navigators.

Instruction: Lectures and training flights in basic aircraft navigation, including electronic equipment utilization; meteorology; celestial, grid, and dead-reckoning navigation; electricity and magnetism; radar systems; and radio operation.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in navigation, 2 in electricity, and additional credit in electrical laboratory on the basis of institutional evaluation (12/68).

AF-1606-0036

ADVANCED HELICOPTER PILOT TRAINING

(Pilot Advanced Flying (H-3) Basic)
(Pilot Advanced Flying (HH-3E) ARRS)
(Pilot Advanced Flying (H-53) Basic)
(Pilot Advanced Flying (HH-53) ARRS)

Course Number: H3P1; H3P2; 1025E-1; 1025E-2; 1025F-1; 1025F-2.

Location: 1550th Aircrew Training and Test Wing, Hill AFB, UT.

Length: 4-10 weeks (46-124 hours).

Exhibit Dates: 6/72-1/88.

Objectives: To provide helicopter pilots with transition and technical training in H-3 and H-53 helicopters.

Instruction: Lectures and practical experience in aerial delivery, air refueling, ballistics, fire suppression, formation flying, gunnery, instruments, navigation, rescue operations, search and orbit, and tactical and transition training.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (2/74).

AF-1606-0037

FLIGHT MECHANIC TRAINING

(Helicopter Mechanic Advanced Flying (HH-53) ARRS)
(Helicopter Mechanic Flying (H-53) Basic)
(Helicopter Mechanic Advanced Flying (HH-3E) ARRS)
(Helicopter Mechanic Flying (H-3) Basic)

Course Number: H3FM1; H3FM2; 431XF-2; 431XF-1; 431XE-2; 431XE-1.

Location: 1550th Aircrew Training and Test Wing, Hill AFB, UT.

Length: 4-10 weeks (37-111 hours).

Exhibit Dates: 6/72-1/88.

Objectives: To train helicopter mechanics to repair, and serve as crew members on, H-3 and H-53 helicopters.

Instruction: Flight training, including flight preparation, ground operations, inflight maintenance, instruments, emergency procedures, and post-flight procedures; and lectures and practical experience in the repair of the Limited Night Recovery System (LNRS).

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (2/74).

AF-1606-0045

1. RADAR INTERCEPT OFFICER TRAINING (MG-12/13)
(Radar Intercept Officer Training)
2. NAVIGATOR RADAR INTERCEPT

Course Number: 156103.

Location: Air Training Command, Connally AFB, TX.

Length: *Version 1:* 25 weeks (511-533 hours). *Version 2:* 21 weeks (386 hours).

Exhibit Dates: *Version 1:* 8/58-12/68. *Version 2:* 6/57-7/58.

Objectives: To qualify Air Force navigators as radar intercept officers.

Instruction: Lectures and practical exercises in navigation and flight line orientation; basic and advanced interceptor techniques; applied tactics; interceptor techniques in flight simulator; electricity and magnetism; circuits and voltmeter, ammeter, ohmmeter familiarization; vacuum tubes, diodes, triodes, tetrodes, pentodes, and thyratrons; power supplies; amplifiers; oscillators; high-frequency circuits and systems; transmission lines and wave-guides; applied intercept techniques; aircraft and surface vessel recognition; and aircraft engineering.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in electricity, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, credit in navigation and electricity on the basis of institutional evaluation (12/68).

AF-1606-0047

ADVANCED AEROSPACE PHOTO INTELLIGENCE

Course Number: OTS8044-1.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 5 weeks (150 hours).

Exhibit Dates: 6/62-12/68.

Objectives: To provide intelligence personnel with advanced training in the processing, storing, retrieving, interpretation, and dissemination of intelligence information.

Instruction: Lectures and practical exercises in the interpretation, processing, storage, retrieval and dissemination of intelligence information, including introductory reconnaissance systems, automatic data processing, photogrammetry, applications of photo intelligence information, microscale photo interpretation, and physical factors in photo interpretation.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photo intelligence (12/68).

AF-1606-0048

DEFENSE SENSOR INTERPRETATION AND APPLICATIONS TRAINING (DSIAT) (OFFICER)

Course Number: OZR8011.

Location: Armed Forces Air Intelligence Training Center, Offutt AFB, NE.

Length: 12 weeks (480 hours).

Exhibit Dates: 10/64-12/68.

Objectives: To train officers to perform as photographic interpreters.

Instruction: Lectures and practical exercises in photo interpretation, including principles and equipment of reconnaissance systems, impact and significance of improved lens/film combinations, use of improved optical and mensuration devices, microscale photo interpretation, automatic and electronic intelligence interpretation, photogrammetry, and photo processing techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photo intelligence (12/68).

AF-1606-0050

PHOTO INTERPRETATION SPECIALIST

Course Number: ABR20630; AB20630; AB20431.

Location: 3750th Technical School, Sheppard AFB, TX; 3415th Technical School, Lowry AFB, CO.

Length: 12-19 weeks (360-540 hours).

Exhibit Dates: 4/54-12/68.

Objectives: To train airmen to interpret, analyze, and evaluate aerial and radar scope photographs for intelligence purposes.

Instruction: Lectures and practical exercises in the interpretation, analysis, and evaluation of aerial and radar scope photographs for intelligence purposes, including filing, indexing, and plotting radar scope photographs; radar scope prediction, photo intelligence section operation, security, and map usage and intelligence information sources.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in photo interpretation (12/68).

AF-1606-0051

DEFENSE SENSOR INTERPRETATION AND APPLICATIONS TRAINING (DSIAT) (AIRMAN)

Course Number: AZR20670.

Location: Armed Forces Air Intelligence Training Center, Offutt AFB, NE.

Length: 11 weeks (440 hours).

Exhibit Dates: 10/64-12/68.

Objectives: To train enlisted personnel to perform as photographic interpreters.

Instruction: Lectures and practical exercises in photo interpretation, including principles and equipment of reconnaissance systems, impact and significance of improved lens/film combinations, use of improved optical and mensuration devices, microscale photo interpretation, automatic and electronic intelligence interpretation, photogrammetry, and photograph processing techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photo intelligence (12/68).

AF-1606-0052

1. Air Intelligence Officer
2. Intelligence Officer

Course Number: *Version 1:* 3OBR8051-1; OBR8051-1. *Version 2:* OBR8051; OB2051; OB2051-1.

Location: *Version 1:* 3415th Technical School, Lowry AFB, CO. *Version 2:* 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 28-30 weeks (840-960 hours). *Version 2:* 12 weeks (360 hours).

Exhibit Dates: *Version 1:* 10/63-12/73. *Version 2:* 5/56-9/63.

Objectives: To train officers to perform as intelligence officers and intelligence photo-radar officers.

Instruction: *All Versions:* Lectures and practical exercises in photo-radar intelligence operations and principles, including image interpretation, radar and intelligence analysis, prediction and targeting, automatic data processing and computer programming as applied to intelligence systems, mission planning, foreign air defense capabilities, nuclear weapons employment, and survival and escape techniques. *Version 1:* Includes tactical interpretation, photogrammetry, multisensor interpretation, briefing and transportation procedures, and intelligence industries.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in photo interpretation and intelligence methods (12/68). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in intelligence methods (12/68).

AF-1606-0054

Air Intelligence Officer

Course Number: OTS8054.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 12 weeks (360 hours).

Exhibit Dates: 12/61-12/68.

Objectives: To train officers to be air intelligence officers.

Instruction: Lectures and practical exercises in air intelligence processes; maps, charts, and photographic radar interpretation; the communist threat; targeting and weapons employment planning; and combat mission activities.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in intelligence methods (12/68).

AF-1606-0055

Air Intelligence Officer

Course Number: 3OBR8051-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 20 weeks (620 hours).

Exhibit Dates: 7/70-12/73.

Objectives: To train officers to be intelligence officers on staff and operational units.

Instruction: Lectures in intelligence fundamentals, automatic data processing as applied to intelligence, imagery interpretation fundamentals, targeting, weapons employment planning, survival techniques, evasion procedures, resistance and escape, integrated operational intelligence system, and intelligence officer responsibilities.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in photo interpretation and intelligence methods (12/68).

AF-1606-0056

Intelligence Precision Photographic Officer

Course Number: 3OBR8061.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO.

Length: 13 weeks (396 hours).

Exhibit Dates: 1/73-12/73.

Objectives: To train enlisted personnel to be intelligence precision photographic officers.

Instruction: Lectures and practical exercises in photography introduction; sensitometric control techniques; chemical control techniques, and precision control techniques; color photography fundamentals; photographic unit management and administration; light theory; printing and developing processes; sensitometry and sensitometric techniques; titling, plotting, and forwarding aerial film; and airborne intelligence imagery systems.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photography (5/74).

AF-1606-0059

1. Photographic Intelligenceman (Air Intelligence Airman)
2. Intelligence Operations Specialist

Course Number: *Version 1:* 3ABR20630-1; ABR20430-1. *Version 2:* ABR20430; AB20430.

Location: *Version 1:* School of Applied Aerospace Sciences, Lowry AFB, CO. 3415th Technical School, Lowry AFB, CO. *Version 2:* 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 14-18 weeks (402-506 hours). *Version 2:* 10-11 weeks (300 hours).

Exhibit Dates: *Version 1:* 7/64-12/73. *Version 2:* 6/54-6/64.

Objectives: To train enlisted personnel to perform intelligence operations and photographic and radar interpretation.

Instruction: Lectures and practical exercises in intelligence fundamentals; map, photographic, and radar interpretation; intelligence collection and dissemination; intelligence estimating and area studies; and mission planning and targeting.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in photographic interpretation (12/68). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in intelligence methods (12/68).

AF-1606-0061

Imagery Intelligence Officer

Course Number: 3OBR8041.

Location: Technical Training Center, Lowry AFB, CO.

Length: 24 weeks (720 hours).

Exhibit Dates: 7/72-12/73.

Objectives: To train officers to be intelligence specialists.

Instruction: Lectures and practical exercises in intelligence operations fundamentals, basic coordinate systems, automatic data processing, photogrammetry, tactical photographic mission planning, imagery interpretation, radar operations, and multisensor imagery reporting.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in political science, 2 in geography, 1 in meteorology (1/74).

AF-1606-0063

Helicopter Instructor Pilot Training

Course Number: IHIPN; IHIPNA; IHIPF; IHIPFA; IH3P1; IH3P2/3; IH53P1; IH53P2; IH53P3.

Location: Aerospace Rescue and Recovery Service, Kirtland AFB,NM.

Length: 2-6 weeks (111-174 hours).

Exhibit Dates: 8/77-1/88.

Objectives: To train helicopter pilots to perform as instructors.

Instruction: Subjects covered include systems transition, procedures, instruments, operations, and general aircrew training on the specific helicopter system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/77).

AF-1606-0064

Flight Mechanic Advanced Flying

Course Number: H53M1; H53M2.

Location: Aerospace Rescue and Recovery Service, Kirtland AFB,NM.

Length: 4-10 weeks (66-116 hours).

Exhibit Dates: 10/77-1/88.

Objectives: To qualify pilots in the H-53 helicopter.

Instruction: Many variables are involved in helicopter training; course provides training sufficient to prepare aircrew member for simulator and then aircraft flying training.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/77).

AF-1606-0065

Pilot Advanced Flying

Course Number: H53P1; H53P2.

Location: Aerospace Rescue and Recovery Service, Kirtland AFB,NM.

Length: 4-10 weeks (70-127 hours).

Exhibit Dates: 10/77-1/88.

Objectives: To qualify pilots in the H-53 helicopter.

Instruction: Course provides training sufficient to prepare aircrew member for simulator and then aircraft flying training.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/77).

AF-1606-0066

Helicopter Instructor Pilot (H-1, H-1N, H-1F, CH-3, CH-53, HH-53)

Course Number: 1025D; 1025DAN; 1025DAF; 1025E1; 1025E2/3; 1025F1; 1025F2.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 2-6 weeks (40-178 hours).

Exhibit Dates: 10/75-1/88.

Objectives: To train and qualify helicopter pilots as instructor pilots.

Instruction: Emphasis is given to developing judgment, initiative, and ability to lead. Students ability to instruct is developed.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/77).

AF-1606-0080

Navigator Bombardier AN/ASQ-38(V) (Navigator Bombardier Training (ASQ-38))

Course Number: B-V7A-S-O; B-V7A-S; 51B-V7A-R; B-V7A-A; 152106B.

Location: Air Training Command, Mather AFB, CA.

Length: 13-28 weeks (347-701 hours).

Exhibit Dates: 8/65-1/88.

Objectives: To train navigators to perform as navigator-bombardiers on aircraft equipped with the AN/ASQ-38 weapons control system.

Instruction: Lectures and practical exercises on the functions of navigator-bombardiers, including AN/ASQ-38 computers, radar, ancillary equipment, operations and malfunction analysis; AGM-28 grid, solo navigation and bombing; integrated navigation and bombing; bomb navigation systems; and basic and advanced operations.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/68).

AF-1606-0084

NAVIGATOR BOMBARDIER UPGRADE TRAINING (FB-111)

Course Number: B-V7A-D.

Location: Air Training Command, Mather AFB, CA.

Length: 9 weeks (218-226 hours).

Exhibit Dates: 11/68-1/88.

Objectives: To train officers to perform as navigator-bombardiers on FB-111 aircraft.

Instruction: Lectures and practical exercises on the functions of navigator-bombardiers, including FB-111 avionics; navigation display and computer control units; optical display sight set; basic ECM principles; armament systems; astrocompass (ASQ-119); advanced avionics; control and display set; specific countermeasures receiver set, dispenser set, and trackbreaker; weapons release requirements; armament system review; simulator training; and mission planning.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/68).

AF-1606-0090

NAVIGATOR RECONNAISSANCE UPGRADING TRAINING (RF-4C)

Course Number: 51-B-V7B-A; 153104R.

Location: Air Training Command, Mather AFB, CA.

Length: 4 weeks (110-117 hours).

Exhibit Dates: 9/66-1/88.

Objectives: To provide navigators with advanced training in aerial navigation.

Instruction: Lectures and practical exercises in reconnaissance procedures. Course includes radar, mission planning, and ECM techniques.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/68).

AF-1606-0091

HELICOPTER PILOT TRANSITION TRAINING (TH-1)

Course Number: F-V5F-G-O.

Location: Air Training Command, Sheppard AFB, TX.

Length: 6 weeks (128 hours).

Exhibit Dates: 4/68-1/88.

Objectives: To train helicopter pilots to fly specific helicopters.

Instruction: Lectures and field exercises in the operation of TH-1F helicopters. Course includes familiarization with machinery, gauges, aerodynamics, engineering, and flight training.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/74).

AF-1606-0106

1. NAVIGATOR BOMBARDIER TRAINING
2. NAVIGATOR BOMBARDIER TRAINING (MA-6A/7A)
   (Advanced Navigator Radar Bombardment Training)
3. ADVANCED NAVIGATOR RECONNAISSANCE BOMBARDMENT
4. ADVANCED NAVIGATOR RECONNAISSANCE BOMBARDMENT
   (Advanced Observer Reconnaissance Bombardment)

Course Number: *Version 1:* 152105. *Version 2:* 152104A. *Version 3:* 152103A. *Version 4:* 152103A; 152103.

Location: Air Training Command, Mather AFB, CA.

Length: *Version 1:* 23-24 weeks (550-585 hours). *Version 2:* 28 weeks (832-855 hours). *Version 3:* 8-22 weeks (516 hours). *Version 4:* 21-42 weeks (1060-1104 hours).

Exhibit Dates: *Version 1:* 11/63-12/68. *Version 2:* 6/49-10/63. *Version 3:* 7/58-5/59. *Version 4:* 5/56-6/58.

Objectives: To train rated navigators to use computer radar bombing and navigation systems.

Instruction: *All Versions:* Lectures and practical exercises in radar navigation and bombing systems, grid navigation, tactical reconnaissance, system computers and interconnect equipment, and operating procedures. *Version 2:* Instruction includes electricity and magnetism, electrical laboratory, and radar fundamentals. *Version 3:* Instruction includes electricity and magnetism, electrical laboratory, radar fundamentals, and navigation. *Version 4:* Instruction includes navigation.

Credit Recommendation: *Version 1:* Credit is not recommeded because of the military nature of the course (12/68). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity and credit in electrical laboratory on the basis of institutional evaluation (12/68). *Version 3:* In the upper-division baccalaureate category, 4 semester hours in navigation, 2 in electricity, and credit in electrical laboratory on the basis of institutional evaluation (12/68). *Version 4:* In the upper-division baccalaureate category, 5 semester hours in navigation (12/68).

AF-1606-0110

PRIMARY PILOT TRAINING (T/34/T-28)
(Primary Pilot Training (PA-18/T-6))

Course Number: 112101-1.

Location: Air Training Command, Columbus AFB, MS; Air Training Command, Bainbridge AFB, GA; Air Training Command, Bartow AFB, FL; Air Training Command, Graham AFB, FL; Air Training Command, Hondo AFB, TX; Air Training Command, Malden AFB, MO; Air Training Command, Marana AFB, AZ; Air Training Command, Moore AFB, TX; Air Training Command, Spence AFB, GA; Air Training Command, Stallings AFB, NC.

Length: 24 weeks (539-549 hours).

Exhibit Dates: 9/54-12/68.

Objectives: To train aviation cadets in visual and instrument flight.

Instruction: Lectures and practical exercises in visual and instrument flight. Topics include aircraft engineering, radio communications, principles of flight, flight instruments, navigation and weather.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in primary meteorology and navigation, and credit in advanced military at institutions which regularly offer such credit (12/68).

AF-1606-0117

F-111A WEAPONS SYSTEM TRAINING (MARK 1)
(F-111A Weapons System Training (NAV/PILOT))
(F-111A Weapons System Training)

Course Number: F-V5H-A; F-V5H-A-0; 1111085.

Location: Air Training Command, Nellis AFB, NV; Air Training Command, Cannon AFB,NM

Length: 9 weeks (243-256 hours).

Exhibit Dates: 9/67-1/88.

Objectives: To train rated pilots in the principles of radar, its employment, and in the use of F-111A avionic systems.

Instruction: Lectures and practical exercises on the principles of radar, its employment, and the operation of F-111A avionic systems, including F-111A navigation systems; bombing and weapon systems; radar air combat techniques and ECM; avionic systems operation; and simulator, mission planning and simulator critique.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/68).

AF-1606-0119

INTELLIGENCE FUNDAMENTALS BY CORRESPONDENCE

Course Number: 8000.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/81-Present.

Learning Outcomes: Upon completion of the course, the student will be able to present intelligence briefings, set standards for intelligence performance, appreciate the complexity and scope of intelligence, and control utilization of classified materials.

Instruction: Monitored home study including readings, written exercises, use of maps and charts, and proctored examinations. Topics include history and nature of intelligence, handling and presenting intelligence data, and the nature of counterintelligence and psychological operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in political science, 1 in geography (5/88).

AF-1606-0120

INTELLIGENCE OFFICER BY CORRESPONDENCE

Course Number: 8001.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/81-Present.

Learning Outcomes: Upon completion of the course, the student will be able to collect, process, and disseminate intelligence, and conduct briefings about prisoner-survival and enemy interrogation.

Instruction: Monitored home study including readings, written exercises, and proctored examination. Topics include collection and dissemination of intelligence, preparing for missions, and comparison of US and Soviet capabilities.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in political science or international relations (5/88).

AF-1606-0121

INTELLIGENCE OPERATIONS SPECIALIST BY CORRESPONDENCE

Course Number: 20150.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84–Present.

Learning Outcomes: Upon completion of the course the student will be able to demonstrate a basic understanding of the military intelligence system to include doctrine, strategy and tactics.

Instruction: Monitored home study including readings, exercises and proctored examinations. Topics include a review of basic military intelligence fundamentals; fundamentals of maps and charts; target planning and selection; weapons' characteristics and effects; combat mission activities.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in political science or government (5/88).

AF-1606-0122

TARGET INTELLIGENCE SPECIALIST BY CORRESPONDENCE

Course Number: 20151.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/85–Present.

Learning Outcomes: Upon completion of the course the student will be able to demonstrate a basic understanding of the military intelligence system to include doctrine, strategy and tactics with a focus on target selection.

Instruction: Monitored home study including readings, exercises and proctored examinations. Topics include a review of basic military intelligence fundamentals; fundamentals of maps and charts; target planning and selection; weapons' characteristics and effects; combat mission activities; basics of imagery and radar intelligence.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in political science or government (5/88).

AF-1606-0123

INTELLIGENCE OPERATIONS TECHNICIAN BY CORRESPONDENCE

Course Number: 20170.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/85–Present.

Learning Outcomes: Upon completion of the course the student will be able to apply general principles of intelligence to the specific U.S. and Soviet cases.

Instruction: Monitored home study with readings, written exercises, and proctored final examinations. Topics include the general intelligence mission and information about Soviet military foces, Warsaw Pact Forces, and China's forces.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in international relations (5/88).

AF-1606-0127

MEDICAL OFFICER FLIGHT FAMILIARIZATION TRAINING (T-37)

(Medical Officer Flight Familiarization Training (T-33))

Course Number: S-V8E-A; 51-935000.

Location: Air Training Command, Perrin AFB, TX; Air Training Command, Randolph AFB, TX.

Length: 5–8 weeks (106–125 hours).

Exhibit Dates: 1/63–1/88.

Objectives: To train aerospace medicine residents in flight familiarization and the problems of flight personnel.

Instruction: Lectures and practical exercises in flight familiarization and the problems of flight personnel, including aviation physiology, flight planning, instrument and radio aids, flight aerodynamics, flight training and navigation, weather, and aircraft engineering.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (7/74).

AF-1606-0128

ADVANCED HELICOPTER TRAINING

(Pilot Advanced Flying (HH-43) ARRS)

Course Number: 1025C-1.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 10–12 weeks (116–124 hours).

Exhibit Dates: 5/72–1/88.

Objectives: To provide H-43 helicopter pilots with transition and tactical flight training.

Instruction: Lectures and practical exercises on H-43 helicopter engineering and operations, including familiarization, utility systems, flight controls, power plant, transmission and rotors, malfunction analysis and maintenance, search and rescue procedures, remote area operations, and engineering review.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/75).

AF-1606-0129

H-43 FIREFIGHTING

Course Number: 571XC-1.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 5 weeks (63 hours).

Exhibit Dates: 5/72–1/88.

Objectives: To provide H-43 helicopter pilots with transition flight training and firefighting.

Instruction: Lectures and practical exercises in transition flight training for H-43 helicopter pilots, with emphasis on firefighting, including introduction to H-43 rescue and fire suppression; H-43 rescue configuration; emergency procedures, equipment, and egress; cargo sling/dummy fire kit operation; rescue hoist procedures, airborne fire suppression kit; care and operation of firefighting equipment; fire suppression procedures; rescue and evacuation; and crew duties for ground support.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/74).

AF-1606-0130

PARARESCUE ADVANCED FLYING TRAINING—LBR

Course Number: 923X0-5.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 5 weeks (63 hours).

Exhibit Dates: 5/72–1/88.

Objectives: To provide H-43 helicopter pilots with transition flight training.

Instruction: Lectures and practical exercises in transition flight training for H-43 helicopter pilots, with emphasis on rescue duty, including rescue operations and training; scanning and pyrotechnics; aircrew survival training; NORAD safe-passage procedures; rescue configuration; emergency procedures, equipment and egress; and rescue hoist procedures.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/74).

AF-1606-0131

H-1 HELICOPTER PILOT

(Advanced Helicopter Pilot Training (H-1/H-3/H-43/H-53))

Course Number: H1P1; H1P2; 1025D7; 1025D7A; 1025D8; 1025D8A; 1025C-F.

Location: Aerospace Rescue and Recovery Service, Kirtland AFB,NM. Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 4–12 weeks (45–156 hours).

Exhibit Dates: 7/71–1/88.

Objectives: To train helicopter pilots in advanced tactical maneuvers in the H-1, H-3, H-43, or H-53 helicopter.

Instruction: Lectures and practical exercises in advanced helicopter training, including advanced flight maneuvers, night flight, remote operations, cargo operations, navigation, aircraft familiarization, and flight training.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (7/74).

AF-1606-0132

F-111A WEAPONS SYSTEM TRAINING (AIRCRAFT COMMANDER)

Course Number: 51-F-V5H-B.

Location: Air Training Command, Nellis AFB, NV.

Length: 3 weeks (91 hours).

Exhibit Dates: 7/68–1/88.

Objectives: To train aircraft commanders in the operation and use of the F-111A avionics system.

Instruction: Lectures and practical exercises in the operation and use of the F-111A avionics system, including weapons system capability, inertial alignment procedures, attack radar modes of operation, simulator procedures, radar types, terrain-following operation, countermeasures dispenser set, conventional munitions control system, avionics system operation, and integrated mission procedures.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (7/74).

AF-1606-0138

PILOT ADVANCED FLYING (TH-1F) BASIC

Course Number: 1025D-0.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 4 weeks (48 hours).

Exhibit Dates: 4/72–1/88.

Objectives: To train pilots to pilot H-1 helicopters.

Instruction: Lectures and practical exercises in the operation of H-1 helicopters. Course includes all aspects of flight procedure, including flight checks, safety, and general flight training.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/74).

AF-1606-0139

Pilot Advanced Flying (TH-1F) SAC

Course Number: 1025D-1.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 8 weeks (100 hours).

Exhibit Dates: 4/72–1/88.

Objectives: To train pilots to pilot H-1 helicopters.

Instruction: Lectures and practical exercises in the operation of H-1 helicopters. Course includes all aspects of flight procedure, including flight checks, safety, and general flight training.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/74).

AF-1606-0140

Pilot Advanced Flying (UH-1N) Basic

Course Number: 1025D-3.

Location: Aerospace Rescue and Recovery Service, Hill AFB, UT.

Length: 4 weeks (41 hours).

Exhibit Dates: 4/72–1/88.

Objectives: To train pilots to pilot H-1 helicopters.

Instruction: Lectures and practical exercises in the operation of H-1 helicopters. Course includes all aspects of flight procedure, including flight checks, safety, and general flight training.

Credit Recommendation: Credit is not recommeded because of the military nature of the course (7/74).

AF-1606-0143

Army Primary Pilot Training

Course Number: 105400-1.

Location: Air Training Command, Edward Gary AFB, TX.

Length: 17 weeks (515–556 hours).

Exhibit Dates: 10/53–12/68.

Objectives: To provide Army officers with training in the basic principles of visual, instrument, and night flying.

Instruction: Lectures and practical exercises in advanced tactics training, including flight training, aircraft engineering, weather, principles of flight, navigation, radio communications, flight instruments, flight planning, and aural and visual code.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in primary meteorology and navigation, and credit in advanced military at institutions which normally offer such credit (12/68).

AF-1606-0145

Undergraduate Navigator Training
(Primary-Basic Navigator Training)
(Primary-Basic Navigator Training)

Course Number: *Version 1:* N-V-6A-B; N-V6A-F; 5-N-V6A-A; N-V6A-D. *Version 2:* 5-N-V6A-A; 153132. *Version 3:* 153138. *Version 4:* 153138. *Version 5:* 153138; 153132; 153130. *Version 6:* 153138; 153132; 153130. *Version 7:* 153101. *Version 8:* 153101.

Location: *Version 1:* Air Training Command, Mather AFB, CA. *Version 2:* Air Training Command, Mather AFB, CA. *Version 3:* Air Training Command, Connally AFB, TX. *Version 4:* Air Training Command, Connally AFB, TX. *Version 5:* Air Training Command, Connally AFB, TX. *Version 6:* Air Training Command, Harlingen AFB, TX. *Version 7:* Air Training Command, Ellington AFB, TX. *Version 8:* Air Training Command, Harlingen AFB, TX.

Length: *Version 1:* 28–36 weeks (384–818 hours). *Version 2:* 38 weeks (852–946 hours). *Version 3:* 37 weeks (935 hours). *Version 4:* 44 weeks (954–1030 hours). *Version 5:* 30–38 weeks (805–862 hours). *Version 6:* 30–38 weeks (805–862 hours). *Version 7:* 42 weeks (1158 hours). *Version 8:* 42 weeks (1158 hours).

Exhibit Dates: *Version 1:* 8/71–1/90. *Version 2:* 8/65–7/71. *Version 3:* 2/65–7/65. *Version 4:* 11/62–1/65. *Version 5:* 9/57–10/62. *Version 6:* 9/57–10/62. *Version 7:* 4/57–8/57. *Version 8:* 4/57–8/57.

Objectives: To train personnel as navigators.

Instruction: *All Versions:* Lectures and practical exercises in navigation, including dead-reckoning, day celestial, night celestial, grid, and radar navigation; aviation physiology, weather; equipment; and flight training. *Version 1:* Topics include flight training, map reading and radar, life support systems, aircraft and navigational equipment, aural code, aircraft systems, flight publications, navigation procedures, over-water navigation, advanced operations, and low-level navigation. *Version 2:* Topics include basic navigation procedures, aural and visual code, radar navigation, aircraft electrical system, special techniques, over-water navigation, ECCM familiarization, and flight publications. *Version 3:* Topics include survival, basic navigation procedures, aural and visual code, map reading and radio, electricity and magnetism, alternating current, vacuum tubes, special techniques and aids, over-water navigation, and electronic warfare orientation. *Version 4:* Topics include survival, basic navigation procedures, electricity and magnetism, aural and visual code, map reading and radio, alternating current, vacuum tubes, basic radio, Loran/Consol navigation, pressure differential flying, special techniques and aids, weapons orientation, and electronic warfare orientation. *Version 5:* Topics include code, nuclear weapons delivery; aircraft recognition; maps, charts, and DR equipment; dead-reckoning aids; air plot and DR techniques; Loran; pressure differential; operational techniques; electricity and magnetism; alternating current; vacuum tubes; radio and Loran; and radar systems. *Version 6:* Topics include code, nuclear weapons delivery; aircraft recognition; maps, charts, and DR equipment; dead-reckoning aids; air plot and DR techniques; Loran; pressure differential; operational techniques; electricity and magnetism; alternating current; vacuum tubes; radio and Loran; and radar systems. *Version 7:* Topics include aural and visual code; maps, charts, and dead-reckoning equipment; dead-reckoning aids, DR techniques and air plot; Loran navigation; pressure differential flying; operational techniques; nuclear weapons delivery training; and survival. *Version 8:* Topics include aural and visual code; maps, charts, and dead-reckoning equipment; dead-reckoning aids; DR techniques and air plot; Loran navigation; pressure differential flying; operational techniques; nuclear weapons delivery training; and survival.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in navigation (7/74). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in navigation (7/74); in the upper-division baccalaureate category, 6 semester hours in navigation (12/68). *Version 3:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electricity (12/68); in the upper-division baccalaureate category, 6 semester hours in navigation (12/68). *Version 4:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electricity (12/68); in the upper-division baccalaureate category, 6 semester hours in navigation, and credit in advanced military at institutions which normally offer such credit (12/68). *Version 5:* In the lower-division baccalaureate/associate degree category, 6 semester hours in navigation (7/74); in the upper-division baccalaureate category, 6 semester hours in navigation, and credit in advanced military at institutions which normally offer such credit (12/68). *Version 6:* In the lower-division baccalaureate/associate degree category, 6 semester hours in navigation (7/74); in the upper-division baccalaureate category, 6 semester hours in navigation, and credit in advanced military at institutions which normally offer such credit (12/68). *Version 7:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electricity (12/68); in the upper-division baccalaureate category, 6 semester hours in navigation, and credit in advanced military at institutions which normally offer such credit (12/68). *Version 8:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electricity (12/68); in the upper-division baccalaureate category, 6 semester hours in navigation, and credit in advanced military at institutions which normally offer such credit (12/68).

AF-1606-0146

Navigator Bombardier System
Training (FB-111)

Course Number: 51-F-V5H-E.

Location: Air Training Command, Mather AFB, CA.

Length: 3 weeks (82 hours).

Exhibit Dates: 5/69–1/88.

Objectives: To train pilots in the operation of FB-111 avionics equipment, with emphasis on bombing.

Instruction: Practical exercises in avionics and mission planning.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/74).

AF-1606-0149

HC-130 Aircrew Instructor Training

Course Number: I-HC130P1; I-HC130RO1; I-HC130N1; I-HC130FE1; I-HC130LM1; I-1035B1; I-1535Z1; I-A293X31; I-A435X0A1; I-A607706.

Location: Aerospace Rescue and Recovery School, Hill AFB, UT.

Length: 8 weeks (131–168 hours).

Exhibit Dates: 11/74–1/90.

Objectives: To train and qualify personnel to perform as instructor pilot (I-1035B1); instructor navigator (I-1535Z1); instructor radio operator (I-A293X31); instructor flight engineer (I-A435X0A1); or instructor loadmaster (I-A607706).

Instruction: Instruction in the principles of instructing and practical exercises in piloting, navigation, radio operation, flight engineering, and loadmaster techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircrew instructional methods (6/75).

AF-1606-0150

Experimental Test Pilot

Course Number: TPS 2865.

Location: Test Pilot School, Edwards AFB, CA.

Length: 46 weeks (585 hours).
Exhibit Dates: 7/74-Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan, fly, evaluate, and report on projects relating to the testing and analysis of aircraft and their related systems. Prerequisite undergraduate degree requirements in engineering, physics, mathematics or related physical sciences provide the foundation for advanced study in integrated academic and flying laboratory exercises. The graudate is qualified to function as a team member in the evaluation of advanced aircraft/systems. Competency is developed in the area of avionic systmes, advanced aerodynamics, appropriate control and flight mechanics theory, and well as aircraft performance. Project proposal planning and writing as well as overall management skills and responsibilities are emphasized.

Instruction: The curriculum is divided into three phases; 1) performance, 2) flying qualities, and 3) systems test. All three phases have integrated academic and flying programs. Examinations in calculus and mechanics are given at the start of the performance phase. This phase develops the theory and methods of evaluating aircraft performance. A performance test program is conducted and a formal written report is generated. Evaluation of flying qualities examines the stability parameters and derivations found in the aircraft equations of motion. A flight controls project is conducted and the results are presented in an oral report. The systems test phase evaluates installed systems and associated equipment. Evaluations are conducted and the results are reported in a series of oral and written reports. As a final student test project, the student test teams conduct a test management project on an aircraft just as they will in flight test projects after graduation.

Credit Recommendation: In the graduate degree category, 3 semester hours in avionics system integration, 2 in aerodynamica, 2 in linear control theory, 4 in flight mechanics, 4 in performance, and 2 in systems management (7/88).

AF-1606-0151

ANG Fighter Weapons Instructor

Course Number: F-400 FWS.
Location: Air National Guard, Reconnaissance Weapons School, Gowan ANGB, Boise, Idaho. Mc Connell AFB, KS.
Length: 14-15 weeks (166-167 hours).
Exhibit Dates: 2/83-Present.

Learning Outcomes: Upon completion of the course, the student will be able to design and participate in instructional programs aimed at teaching aircrews the skills necessary to provide weapons, weapons related systems and tactical expertise at the squadron, wing and head quarters level. In order to perform these functions he must possess communication and instructional skills in both academic and flying areas. Specific requirements include a competency in array of weapons and weapon related systems, avionics devices and their systems to support delivery as well as the tactics to employ the various systems. In addition it is necessary to have the skills necessary to coordinate and implement modifications to both tactics and the weapons systems.

Instruction: This course is designed for experienced F-4 piolt instructors and is of an advanced nature instructional methods involved in the delivery of this curriculum involves a wide variety of techniques. The primary teaching methods are those of classroom lecture supported by very specialized laboratory assignments - namely flight problems. This core of work is supported by 50 hours of self study, 4 hours of seminars, 9 hours of examinations and 4 hours of critique integrateed into the 78 days of the program as appropriate. The lecture phase treats such topics as aerodynamics and performance instructor perparation and communication, special weapons systems and tactics, aggressor military and social information and flight mission planning. The flying portion of the program provides a unique opportunity for seminars, 9 hours of examinations and 4 hours of critique intergrated into the 78 days of the program as appropriate. The lecture phase treats such topics as aerodynamics and performance instructo preparation and communication, special weapons systems and tactics, aggressor military and social information and flight mission planning. The flying portion of the program provides a unique opportunity for planning, executing and evaluating the material covered in the classroon. Qualified instructors monitors all phases of the program.

Credit Recommendation: In the graduate degree category, 2 semester hours in computer applications, 3 in avionics/electronics/systems, 3 in instructional methods and 3 in applied aerodynamics (9/89).

AF-1606-0152

RF-4 Fighter Weapons Instructor

Course Number: RF-400 RWS.
Location: Air National Guard, Reconnaissance Weapons School, Gouen ANGB, Boise, Idaho.
Length: 14 weeks (198 hours).
Exhibit Dates: 2/83-Present.

Learning Outcomes: Upon completion of the course the graduate will be able to develop instructors in all phases of the RF-4 fighter weapons system. The gruaduate will also be qualified to function as the weapons officer in an operational unit. He will also possess communicative skills and effective instructional techniques in both the academic and flight areas of the RF-4 Weapons System.

Instruction: The course is restricted to pilots who have an minimum of 300 hours in RF-4, are instructor pilot or instructor weapons system officer, are current mission ready crew member or ready training unit instructor pilot or instructor weapons systems officer, are qualified in very low altitude training to 300 feet above ground level, are defense maneuvering qualified, and pilots only must be air combat instructor pilot qualified. Further, recent experience requirements are: 16 sorties in preceeding 60 days, 10 sorties in preceeding 30 days, at least 3 of which are devoted to air combat training, all physical and flight checks accomplished prior to arrival with none due during the course, and possess a top secret clearance. The curriculum consists of 152 hours of academic work supported by 42.5 hours of related flight activities and 2.9 hours of device (simulator) training. Each flight sortie requires approximately 6 hours of additional time for planning, briefing and critique. Classes are small (approximately 4 students), permitting a high instructor-student ratio and providing concentrated instruction. Highly experienced and academically qualified faculty are involved in all phases of the program. Adequate equipment and facilities are available and maintained in a high state of readiness.

Credit Recommendation: In the graduate degree category, 1 semester hours in computer applications, 4 in avionics/electronics, systems and photography, 3 in instructional methodology, and 3 in applied aerodynamics (9/89).

AF-1606-0153

Flight Test Engineer/Navigator

Course Number: TPS 28XX; TPS 2875.
Location: Test Pilot School, Edwards AFB, CA.
Length: 46 weeks (585 hours).
Exhibit Dates: 7/74-Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan, fly, evaluate, and report on projects relating to the testing and analysis of aircraft and their related systems. Prerequisite undergraduate degree requirements in engineering, physics, mathematics or related physical sciences provide the foundation for advanced study in integrated academic and flying laboratory exercises. The graudate is qualified to function as a team member in the evaluation of advanced aircraft/systems. Competency is developed in the area of avionic systmes, advanced aerodynamics, appropriate control and flight mechanics theory, and well as aircraft performance. Project proposal planning and writing as well as overall management skills and responsibilities are emphasized.

Instruction: The curriculum is divided into three phases; 1) performance, 2) flying qualities, and 3) systems test. All three phases have integrated academic and flying programs. Examinations in calculus and mechanics are given at the start of the performance phase. This phase develops the theory and methods of evaluating aircraft performance. A performance test program is conducted and a formal written report is generated. Evaluation of flying qualities examines the stability parameters and derivations found in the aircraft equations of motion. A flight controls project is conducted and the results are presented in an oral report. The systems test phase evaluates installed systems and associated equipment. Evaluations are conducted and the results are reported in a series of oral and written reports. As a final student test project, the student test teams conduct a test management project on an aircraft just as they will in flight test projects after graduation.

Credit Recommendation: In the graduate degree category, 3 semester hours in avionics system integration, 2 in aerodynamica, 2 in linear control theory, 4 in flight mechanics, 4 in performance, and 2 in systems management (7/88).

AF-1701-0001

Air Conditioning Engineering

Course Number: None.
Location: Civil Engineering School, Wright-Patterson AFB, OH.
Length: 6 weeks (253 hours).
Exhibit Dates: 4/73-1/88.

Objectives: To train engineers to apply current technology to building enviromental control systems.

Instruction: Lectures and practical exercises in air conditioning engineering at the advanced level. Course includes management concerns, psychrometrics, load estimating, refrigeration principles, equipment selection, load analysis, design analysis, systems, piping design, duct design, electrical controls, and design problems.

Credit Recommendation: In the upper-division baccalaureate category, 12 semester hours in air conditioning engineering (6/74).

AF-1701-0008

Apprentice Heating Systems Specialist by Correspondence

Course Number: 54532.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 3/88–Present. *Version 2:* 5/83–2/88.

Objectives: To train personnel in heating systems installation.

Instruction: Consists of on-the-job training and at-home studies in the installation of various types of heating systems. The home study provides training in the principles of heating and the on-the-job training provides the application. The course includes basic electricity, principles of heating, heating systems, heating plants, water treatment and external corrosion.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 6 semester hours in heating systems installation and maintenance (9/86).

AF-1701-0009

Heating Systems Technician by Correspondence

Course Number: 54572.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/84–Present.

Objectives: To train personnel to be specialists in the installation and maintenance of heating systems.

Instruction: Consists of on-the-job training and at-home studies in the installation and maintenance of various types of heating systems. The home study provides the principles and practice of heating systems and on-the-job training provides the application. The course includes heating principles, fuels, electrical and pneumatic control systems, warm air and water heating systems, and central heating systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in advanced plumbing (9/86); in the lower-division baccalaureate/associate degree category, 2 in mechanical and electrical equipment in buildings (heating) (9/86).

AF-1703-0005

Special Vehicle Repairman (Towing and Servicing Vehicle)

Course Number: 3ABR47231-1.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL.

Length: *Version 1:* 14 weeks (512 hours). *Version 2:* 10 weeks (398 hours).

Exhibit Dates: *Version 1:* 7/73–12/73. *Version 2:* 2/73–6/73.

Objectives: To train airmen to perform as special vehicle repairmen (towing and servicing vehicles).

Instruction: *All Versions:* Lectures and practical exercises in the functions of special vehicle repairmen, including inspection, service, testing, adjustments, troubleshooting, and repairing towing and servicing vehicles; gasoline and diesel engine tune-up and repair, transmission servicing and adjustment; cooling and lubrication systems servicing and repair; power train repair; steering and brake systems repair and adjustment; electrical and hydraulic systems servicing and repair; anti-pollution and emission control systems inspection and servicing; preparation of vehicles for climatic conditions, storage, shipment, and corrosion control; safety; maintenance management; communications security; publications; and test and repair equipment. *Version 2:* Topics include driver education, supplemental military training, troop information program, and briefings.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in automotive power plants (7/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in automotive power plants (7/74).

AF-1703-0006

General Purpose Vehicle Repairman

Course Number: 3ABR47330.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 12–13 weeks (360–390 hours).

Exhibit Dates: 1/70–12/73.

Objectives: To train enlisted personnel to repair passenger cars and light- and medium-duty trucks.

Instruction: Lectures and practical exercises in the mechanics and repair of passenger cars and light- and medium-duty trucks. Course includes gasoline engines, fuel systems, electrical systems, chassis and suspension, power trains, and brakes.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in power plants and tune-up, 3 in automobile electrical systems, 3 in power trains (7/74).

AF-1703-0007

General Purpose Vehicle Repairman (Accelerated)

Course Number: 3ABR47330.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 9–10 weeks (270–300 hours).

Exhibit Dates: 1/70–12/73.

Objectives: To train enlisted personnel to repair passenger cars and light- and medium-duty trucks.

Instruction: Lectures and practical exercises in the mechanics and repair of passenger cars and light- and medium-duty trucks. Course includes gasoline engines, fuel systems, electrical systems, chassis and suspension, power trains, and brakes.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in power plants and tune-up, 3 in automobile electrical systems, 3 in power trains (7/74).

AF-1703-0008

Automotive AC Electrical Systems

Course Number: 3AZR47350-2.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 3 weeks (78–94 hours).

Exhibit Dates: 8/72–12/73.

Objectives: To train maintenance personnel to repair automotive electrical systems.

Instruction: Lectures and practical exercises in the duties of automotive electrical systems technicians. Course includes theory of operation, transistor application, voltage regulators, troubleshooting, and repair and testing of AC system components.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in automotive electronics (7/74).

AF-1703-0010

Vehicle Maintenance Technician

Course Number: AA47170.

Location: 3450th Technical School, Warren AFB, WY.

Length: 19 weeks (570 hours).

Exhibit Dates: 6/55–12/68.

Objectives: To train selected senior-level specialists to maintain and inspect representative types of general-purpose, special-purpose, and construction equipment.

Instruction: Lectures and practical exercises in maintenance and inspection of general-purpose, special-purpose and construction equipment. Course includes publications, maintenance of power-train units and use of special equipment, maintenance of engines and electrical equipment, including use of diagnostic and reconditioning equipment, troubleshooting procedures, on-the-job-training, and shop supervision.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced garage practice (7/74).

AF-1703-0012

General Purpose Automatic Transmission Maintenance

Course Number: 3AZR47350-3.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL.

Length: 3 weeks (120 hours).

Exhibit Dates: 7/73–12/73.

Objectives: To train maintenance personnel as repairmen on general-purpose vehicle automatic transmissions.

Instruction: Lectures and practical exercises in the repair of general-purpose vehicle automatic transmissions, including basic hydraulic principles; planetary gear systems; transmission test instruments; troubleshooting, repair, and testing of specific transmissions; and general maintenance procedures.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in automotive technology (7/74).

AF-1703-0017

Vehicle Diagnostic Test Equipment

Course Number: 3AZR47350-1, AZR47151-1.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 6 weeks (180–240 hours).

Exhibit Dates: 11/65–12/73.

Objectives: To train enlisted personnel to use modern automotive test equipment to diagnose and repair defects in automotive vehicles.

Instruction: Lectures and practical exercises in the use of diagnostic automotive equipment. Course includes chassis and front-end alignment, automotive electrical systems, fuel and ignition systems, and use of diagnostic equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in engine diagnosis (7/74).

AF-1703-0018

General Purpose Vehicle Mechanic by Correspondence

Course Number: 17252.

Location: Entension Course Institute, Gunter AFS,AL.

Length: Maximum of 52 weeks.

Exhibit Dates: 3/81-Present.

Objectives: To train enlisted personnel to repair general purpose vehicles.

Instruction: This correspondence course offers individualized reading and study of the basic theory of operation and the repair of buses, trailers, semi-trailers, light and medium trucks and staff cars. The course includes shop organization publications, supply, vehicle inspection, engines, fuel systems, exhaust and emission systems, electrical systems, hydraulics, power trains, heating, air conditioning, and front end alignment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in general automotive repair, 1 in shop practices, and 1 in preventive maintenance systems (9/85).

AF-1703-0019

Fuel Specialist by Correspondence

Course Number: 63150.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/83-Present.

Objectives: To train selected enlisted personnel to become fuel specialists.

Instruction: This course presents individualized readings dealing with airmen fuel career fields, publications and operations security, safety, fuel control centers, fuel quality assurance and product accountability, fueling systems, air transportable fuel systems, cryotainers and mobile fueling equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aviation technology (12/84).

AF-1704-0002

Air Traffic Control Officer

Course Number: *Version 1:* 3OBR1631. *Version 2:* OBR1631; OB1631.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 16-17 weeks (480-510 hours). *Version 2:* 12-14 weeks (420-476 hours).

Exhibit Dates: *Version 1:* 2/69-12/73. *Version 2:* 3/58-1/69.

Objectives: To provide officers and enlisted personnel with training in all phases of air traffic control, qualifying them for FAA control tower certification.

Instruction: Lectures and practical exercises in air traffic control operations, including VFR and IFR radar/nonradar traffic control, meteorology, navigation, and FAA certification instruction and examination.

Credit Recommendation: In the upper-division baccalaureate category, 8 semester hours in air traffic control (3/74). In the upper-division baccalaureate category, credit in meterology or air navigation on the basis of institutional evaluation (12/68).

AF-1704-0010

Advanced Air Traffic Control Officer

Course Number: OAR1611.

Location: Technical Training Center, Keesler AFB, MS.

Length: 10 weeks (300 hours).

Exhibit Dates: 2/60-12/68.

Objectives: To train officers to plan and direct air traffic control activities.

Instruction: Lectures in duties and responsibilities of air traffic control staff officers; navigational aids; plans, programs, and budgets; and air traffic control planning exercises.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in air traffic control management (12/68).

AF-1704-0013

Aircraft Maintenance Technician

Course Number: AAR43171.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 16 weeks (480 hours).

Exhibit Dates: 8/66-4/68.

Objectives: To train airmen as aircraft maintenance technicians.

Instruction: Lectures and practical exercises in maintenance of jet and reciprocating-engine fixed-wing aircraft; standard publication systems; administration and management duties; aircraft records; weight and balance functions; and theory of operation, functional checks and troubleshooting of aircraft systems.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management, and credit in electricity/electrical laboratory on the basis of institutional evaluation (12/68).

AF-1704-0021

Credit Recommendation:

AF-1704-0027

1. Flight Engineer Specialist, Jet Aircraft
2. Flight Engineer Specialist
3. Flight Engineer Technician

Course Number: *Version 1:* 3ALR43550C. *Version 2:* ALR43550C. *Version 3:* ALR43570; ALR43174; AL43174.

Location: 3750th Technical School, Sheppard AFB, TX. *Version 3:* 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 10 weeks (300 hours). *Version 2:* 12 weeks (360 hours). *Version 3:* 13-14 weeks (390-420 hours).

Exhibit Dates: *Version 1:* 1/70-12/73. *Version 2:* 3/67-12/69. *Version 3:* 3/58-2/67.

Objectives: To train enlisted personnel to perform as flight engineers.

Instruction: *All Versions:* Lectures and practical experience in jet aircraft flight engineering, including ground instruction in time, speed, distance, and fuel conversion factors and formulae, and graphic and linear interpolation; aerodynamics; weight and balance; takeoff and landing planning; aircraft climb, cruise, and descent performance analysis; log maintenance; maximum load mission requirements; and mission preplanning and in-flight replanning. *Version 1:* Instruction applicable to jet aircraft. *Version 2:* Instruction applicable to reciprocating and jet aircraft. *Version 3:* Instruction applicable to reciprocating aircraft.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in flight engineering (2/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in aerodynamics (12/68). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in aerodynamics (12/68).

AF-1704-0031

C-141 Flight Engineer Technician

Course Number: A435X0C-1.

Location: 443d Military Airlift Wing, Altus AFB, OK.

Length: 9 weeks (131 hours).

Exhibit Dates: 7/72-1/90.

Objectives: To provide flight engineers with knowledge of the normal and emergency functions of the C-141 aircraft.

Instruction: Lectures and practical exercises on the C-141 aircraft, its systems and components, and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in flight engineer technician (2/74).

AF-1704-0033

C-5 Flight Engineer Technician
(Flight Engineer School, C-5)

Course Number: A43570C-4.

Location: 443d Military Airlift Wing, Altus AFB, OK.

Length: 9 weeks (130 hours).

Exhibit Dates: 2/73-1/90.

Objectives: To provide enlisted personnel with a practical knowledge of the C-5 aircraft, its subsystems, and troubleshooting procedures.

Instruction: Lectures and practical exercises in troubleshooting and solution of performance problems; simulator training designed to enable students to perform preflight checks without assistance, to understand both normal and emergency procedures, and to manage subsystems with and without related component failures; flight training in which students demonstrate the ability to accomplish normal and emergency operation procedures, preflight checks, and scanner preflight checks, and to demonstrate ability to manage and/or operate pertinent aircraft subsystems.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in flight engineering (2/74).

AF-1704-0049

Reciprocating Engine Technician

Course Number: AAR43271; AA43271.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 14 weeks (420 hours).

Exhibit Dates: 5/56-12/68.

Objectives: To train reciprocating-engine technicians as maintenance supervisors.

Instruction: Lectures and practical exercises in personnel and equipment management, including operating principles and construction features of reciprocating engines; and application or principles in inspection, repair, adjustment and conditioning of engine systems. Practical experience in troubleshooting, analysis, minor repair, and build-up of reciprocating engines.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management or aviation maintenance management (12/68).

AF-1704-0054

Airframe Repair Specialist by Correspondence

Course Number: 53153.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/77–10/87.

Objectives: To train a technician through on-the-job supervision and home study in airframe repair.

Instruction: Through on the job training under supervision and home study modules the student covers the following: airframe repair operations, the airframe shop, supervision and training, supply system management, technical order system, and airframe safety. Also covered are metal working, aircraft construction features, aircraft metals, basic handtools, layout techniques, metal forming and cutting. The course also includes repair procedures such as drilling and riveting, repair procedures and damage removal and layout, and special repair layout. Specialized repairs include plastic structures, fiber glass structures, metal bonded honeycomb structures, aircraft cables, tubing, and balancing and alignment of aircraft structures. Course concludes with a proctored examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours aircraft structural repairs, 1 in aircraft rigging (3/85).

AF-1704-0070

MASTER CREW CHIEF

Course Number: None.

Location: 443d Military Airlift Wing, Altus AFB, OK.

Length: 2 weeks (68 hours).

Exhibit Dates: 2/73–1/90.

Objectives: To provide enlisted personnel with a basic understanding of maintenance management.

Instruction: Lectures and practical experience in systems management and the fundamentals of organization, maintenance data collection, supply procedures, and standards and inspection.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in aviation maintenance management (2/74).

AF-1704-0078

JET ENGINE TECHNICIAN

Course Number: 3AAR43270-1; AAR43270-1 AAR43270; AA43270.

Location: 3345th Technical School, Chanute AFB, IL; 3750th Technical School, Sheppard AFB, TX.

Length: 10–16 weeks (300–480 hours).

Exhibit Dates: 5/56–6/73.

Objectives: To train enlisted personnel to maintain and repair jet turbines.

Instruction: Lectures and practical experience in turbine jet engine maintenance and repair, including maintenance principles, inspection procedures and trouble analysis, minor repair procedures, support equipment operation and maintenance, and test facility operation and usage.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1704-0083

AIRCRAFT MAINTENANCE INDOCTRINATION (SAC)

Course Number: OZR4341-2.

Location: Technical Training Center, Chanute AFB, IL.

Length: 6 weeks (138 hours).

Exhibit Dates: 10/60–12/68.

Objectives: To train enlisted personnel in aircraft electronics maintenance.

Instruction: Lectures and practical exercises in line maintenance organization, publications, control, data collection systems, precision measuring equipment, records analysis, quality control, accident investigation, safety, and problem solving.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1704-0088

AIRCRAFT MAINTENANCE TECHNICIAN, RECIPROCATING ENGINE AIRCRAFT

Course Number: AAR43171A; AAR43171B; AA43171B.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 14–16 weeks (420–480 hours).

Exhibit Dates: 11/55–12/68.

Objectives: To train aircraft mechanics to plan and schedule maintenance work.

Instruction: Lectures and laboratories in maintenance, aircraft electrical systems, aircraft hydraulic systems, aircraft records, maintenance management, and personnel utilization.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68), and credit in electricity and electrical laboratory on the basis of institutional evaluation (3/74).

AF-1704-0094

FLIGHT ENGINEER SPECIALIST BY CORRESPONDENCE

Course Number: 11350C.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/82–Present.

Objectives: To teach individuals to perform as flight engineers without direct supervision.

Instruction: The course consists of a combination of self-study supplemented by close supervision. Introduction to flight management procedures and aircraft record keeping is presented. The course also covers ground handling and service of aircraft before and after flight. There is an in-depth study of factors which influence aircraft cargo distribution for safe loading, and calculations of aircraft performance from takeoff to landing. The course includes climb, cruise, and descent performance. Other topics involve the understanding of electrical, hydraulic, instrument, fuel and related aircraft systems; powerplants, auxiliary power units, bleed air, air conditioning and pressurization systems; adverse weather, fire emergency, oxygen, communications and navigation systems. Systems study leads to qualification to operate systems in normal and emergency situations.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in flight engineer (3/85).Course concludes with a proctored examination.

AF-1704-0102

AIRCRAFT MAINTENANCE SPECIALIST, TACTICAL AIRCRAFT BY CORRESPONDENCE

Course Number: 43151.

Location: Extension Course Institute, Gunter AFS,AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/79–Present.

Objectives: To provide education and training in the techniques and applications of skills related to aircraft maintenance of tactical aircraft.

Instruction: This correspondence course of instruction consists of on-the job supervision and at home studies. The course provides general knowledge about maintenance management, maintenance and inspection concepts, and aircraft hardware and tools. The course provides information about aircraft, cleaning and corrosion control, ground equipment and ground handling and egress systems, maintenance tasks related to electrical, pneudralic, flight controls, landing gears, oxygen, and utility systems, as well as providing general information about turbojet, and reciprocating engines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft cleaning and corrosion control or in aircraft ground servicing and handling (3/85). Course concludes with a proctored examination.

AF-1704-0126

GUIDANCE SYSTEM TECHNICIAN (SM68)

Course Number: ATS31170P-2.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 32 weeks (960 hours).

Exhibit Dates: 6/61–12/68.

Objectives: To train advanced maintenance technicians to maintain and repair rocket guidance systems.

Instruction: Lectures and practical exercises in the maintenance and repair of rocket guidance systems. Course includes functional description, operating procedures, operational check-out, simplified troubleshooting, removal and replacement, alignment procedures, data flow loop theory, inspections, chassis repair, and test pack operation and maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical systems maintenance management (6/74).

AF-1704-0137

JET ENGINE MECHANIC BY CORRESPONDENCE

Course Number: 42652.

Location: Entension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 4/87–Present. *Version 2:* 4/81–3/87.

Learning Outcomes: Upon completion of the course, the student will be able to perform effective maintenance in the area of jet propulsion to include management of jet mechanics, maintenance forms and records, jet theory and maintenance information, practices and procedures, jet engine systems, and operation and adjustment of jet engines and small gas turbine engines.

Instruction: *Version 1:* Course covers maintenance forms and records, jet engine operation and construction, tools and hardware, repair and maintenance of the jet engine, corrosion control, support equipment, fuel system, oil system, starter, ignition and electrical system, anti-icing, thrust reversers, constant speed drive, test equipment, jet operation and adjustment, engine removal, troubleshooting, small turbine engine disassembly, inspection, reassembly, and testing. *Version 2:* This is an independent study program complemented by direct and indirect supervision during hands-on training. The student studies the following:

overview of aircraft engine maintenance complex/organization; introduction to personnel supervision and relations; fundamentals of equipment and tool control, supply procedures, technical publications and training; operating principles and construction of small and large gas turbine engines; special tools and equipment; maintenance and inspection systems and documentation; repair and maintenance of gas turbine engines to include corrosion control, storage and transportation; operations, maintenance and service of ground equipment; principles of fuels, fuel systems, lubricants, oil systems, starter and ignition systems; jet engine thrust augmentation, variable nozzle systems, thrust reversers, constant special devices; testing, instrumentation, checks and adjustments of jet engines; engine/systems troubleshooting, removal, and installation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in gas turbine theory and maintenance (10/88). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft jet engines and related systems (3/85). Course concludes with a proctored examination.

AF-1704-0143

A/E24U-8 Power Plant Intermediate and Organizational (I & O) Maintenance

Course Number: 3ABR42153-1; AZR42153-1.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 5-6 weeks (168-208 hours).

Exhibit Dates: 3/72-12/73.

Objectives: To train enlisted personnel to maintain electrical power plants.

Instruction: Lectures and practical exercises in the maintenance of electrical power plants. Topics include gas turbine engines, solid-state control devices, and logic and circuit functions and diagrams.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in gas turbine engines, 3 in electronics laboratory (7/74).

AF-1704-0162

Aircraft Maintenance Technician, Tactical Aircraft by Correspondence

Course Number: 43171.

Location: Entension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/79-4/88.

Objectives: To provide education and training in techniques and application of skills related to aircraft maintenance at a technician's level on tactical aircraft.

Instruction: This correspondence course consists of on-the-job supervision and at home studies on various tactical aircraft in the area of supervision, supply maintenance management, publications and aircraft records, aircraft inspection, and maintenance systems, ground handling equipment, aircraft systems, pneudralics, airframe and egress systems, landing gear and flight control system, fuel systems, power plant, electrical, oxygen, and aircraft utility system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft ground servicing and handling (3/85). Proctored final examination is required.

AF-1704-0165

Aircraft Electrical Repair Technician

(Aircraft and Missile Electrical Repair Technician)

Course Number: 3AAR42370; AAR42370; AA42370.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 14-16 weeks (420-480 hours).

Exhibit Dates: 4/58-12/73.

Objectives: To train airmen to repair electrical equipment on aircraft.

Instruction: Lectures and practical exercises in the repair of aircraft electrical equipment, including DC and AC power supplies, transformers and motors, diodes, transistors, special-purpose tubes, switching circuits, oscillators, inverters and control panel circuits, electrical test equipment, electrical system components and subsystems, troubleshooting and maintenance, and maintenance management procedures.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory on the basis of institutional evaluation (7/74).

AF-1704-0172

Turboprop Propulsion Mechanic by Correspondence

Course Number: 42653.

Location: Extension Course Institute, Gunter AFS,AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84-Present.

Objectives: To train a less experienced mechanic for more responsible levels of maintenance with progressively less supervision being required.

Instruction: Through independent study complemented by directly and indirectly supervised hands-on training the student works and learns in the following areas: maintenance site orientation and maintenance management, supervision and human relations, gas turbine engines and systems, principles of operation, inspection maintenance and repair to include prevention maintenance, troubleshooting and testing of engines and systems. Systems studied include Hamilton Standard propeller controls and General Electric small turboshaft engines with basic material on tools, equipment, fuels and fuel systems, oil and oil systems, engine instruments and indicating systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in aircraft turboprop engines and subsystems (3/85).Proctored final examination is required.

AF-1704-0173

Missile Pneudraulic Repairman (LGM-25)

Course Number: 3ABR44230F-1; ABR44230F-1.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 18 weeks (510 hours).

Exhibit Dates: 4/66-3/71.

Objectives: To train airmen as missile pneudraulic repairmen for specific missiles.

Instruction: Lectures and practical exercises on the duties of missile pneudraulic repairmen. Topics include principles of mechanics; fundamentals of AC and DC; motors, generators, and malfunction analysis; electronics and rocket engines; calibration, hydraulic pumping unit, and fluid analysis; flight controls, missile hydraulic systems and hydraulic system control unit; facility pneudraulic systems, antenna pneumatic systems and hydraulic components test stand.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity for non-technical students (7/74).

AF-1704-0181

Strategic Aircraft Maintenance Specialist by Correspondence

(Aircraft Maintenance Specialist, Airlift and Bombardment Aircraft by Correspondence)

Course Number: 43152C.

Location: Extension Course Institute, Gunter AFS,AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/82-Present.

Objectives: To provide education and training in the techniques and applications of skills related to aircraft maintenance on strategic aircraft.

Instruction: This correspondence course of instruction consists of on the job supervision and at home studies. The course provides general knowledge of aircraft maintenance and job-related information about airframe systems, ground handling and servicing; fuel; turboprop and electrical systems; and hydraulic, landing gear, flight controls,and utility systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft ground servicing and handling (3/85). Proctored final examination is required.

AF-1704-0184

Airlift Aircraft Maintenance Specialist by Correspondence

(Aircraft Maintenance Specialist and Bombardment Aircraft by Correspondence)

Course Number: 43152G.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/82-Present.

Objectives: To provide education and training in techniques and applications of skills related to maintenance of airlift and bombardment aircraft.

Instruction: This correspondence course consists of at home studies and on the job supervision on the C-141 and C-5A jet aircraft in the area of technical and material deficiency reporting. Inspection concepts, tools, and material supply, ground handling, equipment, airframe systems, fuel systems, powerplant and auxiliary power unit (APU), electrical system, hydraulic and cargo door system, landing gear, flight controls and utility systems are all covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft ground servicing and handling (3/85). Proctored final examination is required.

AF-1704-0187

Aerospace Ground Equipment Mechanic by Correspondence

Course Number: 42153.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/79-Present.

Objectives: To advance the technical skills of ground equipment mechanics in aerospace ground equipment.

Instruction: This correspondence course and practical exercises focuses on operation and maintenance of aerospace ground equipment. Topics include maintenance policies, practices and procedures, electrical circuits and components, engines (gas and turbine), generators, air compressors, heating, air conditioning, bomb lifts, diesels, hydraulics, and test equipment. There is a proctored final examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in ground equipment repair (3/85).

AF-1704-0188

STRATEGIC AIRCRAFT MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 43152E.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/82–Present.

Objectives: To provide education in the techniques and applications of skills related to aircraft maintenance.

Instruction: This correspondence course consists of on-the-job supervised application and at home studies in the areas of: maintenance inspection concepts, tools, maintenance material, supply, ground handling requirements, airframe systems, pneudralic systems, landing gears, flight control and ground support equipment, all for the KC 135 jet aircraft.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft ground servicing and handling (3/85). Proctored final examination is required.

AF-1704-0189

JET ENGINE TECHNICIAN BY CORRESPONDENCE

Course Number: 42672.

Location: Entension Course Institute, Gunter AFS, AL.

Length: Maximim 52 weeks.

Exhibit Dates: 7/84–3/88.

Objectives: To teach the jet engine mechanic to repair and maintain small and large gas turbine engines and to train and supervise lesser skilled mechanics.

Instruction: Course offers independent study complimented by direct and indirect supervision in the following areas: maintenance and personnel management with emphasis on supervisory functions, safety compliance, personnel evaluations and training of subordinates, maintenance management, data collection and publications; supply functions; inspection systems, electrical systems components and diagrams, disassembly inspection and reassembly of both small and large gas turbine engines; testing, operational checks and adjustments of jet engines; use of engine noise suppressors during engine maintenance test, operation and special equipment; overview of activities and procedures related to jet engine maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in aircraft shop maintenance management (3/85). The course concludes with a required proctored final examination.

AF-1704-0190

AIRCRAFT MAINTENANCE TECHNICIAN, AIRLIFT AND BOMBARDMENT AIRCRAFT BY CORRESPONDENCE

Course Number: 43172.

Location: Entension Course Institute, Gunter AFS,AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/79–4/88.

Objectives: To provide education and training in techniques and applications of skills related to aircraft maintenance on airlift and bombardment aircraft.

Instruction: This correspondence course consists of on-job supervision and at home studies on airlift and bombardment aircraft in the areas of: supervision, supply, maintenance management, publications and aircraft records, inspection, ground handling equipment, corrosion control, maintenance materials, aircraft ground handling, airframe system, hydraulic pressure supply, landing gears and related systems and flight control and bomb and cargo door systems, aircraft electrical and fuel systems, powerplant and related systems, auxiliary power units (APU), bleed air, air conditioning and pressurization system, anti-icing and rain removal systems, oxygen, fire and overheat systems, egress and drag chute system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft ground servicing and handling (3/85). Proctored final examination is required.

AF-1704-0191

AIRCRAFT FUEL SYSTEMS MECHANIC BY CORRESPONDENCE

Course Number: 42353.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/81–Present.

Objectives: To provide education and training in the techniques and applications of skills related to aircraft fuel systems maintenance.

Instruction: This correspondence course of instruction consists of on-job supervision and at home studies in the areas of: maintenance management, shop and flight line safety, hand tools and hardware, operational checks and troubleshooting, fuel systems, fuel system safety; tools, equipment and protective clothing; and leak detection and repair of integral tanks and bladder tanks/cells.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft fuel systems (3/85). Course concludes with a proctored examination.

AF-1704-0192

AEROSPACE GROUND EQUIPMENT TECHNICIAN BY CORRESPONDENCE

Course Number: 42173.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/75–Present.

Objectives: To advance the skills of the ground equipment technician in the area of aerospace ground equipment.

Instruction: This is a correspondence course and practical exercises in the operation and maintenance of aerospace ground equipment. Topics include maintenance policies, practices and procedures; electrical and electronic circuits and components, aircraft servicing equipment which includes generators, air compressors, air conditioning, heating, ventilation and hydraulic equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in ground equipment repair (3/85). Course concludes with a proctored examination.

AF-1704-0193

FIGHTER WEAPONS INSTRUCTOR

Course Number: A7000FW.

Location: Air National Guard, A-7 Fighter Weapons School, Tucson, AZ.

Length: 16 weeks (292 hours).

Exhibit Dates: 10/73–Present.

Learning Outcomes: Upon completion of the course the student will be able to develop instructors in all phases of the A-7 fighter weapons system. The graduate will also be qualified to function as the weapons officer in an operational unit. He will also possess communicative skills and effective instructional techniques in both the academic and flight areas of the A-7 weapons system.

Instruction: This course is restricted to pilots who have an average of ten years of military flight experience. They have been selected by their commanding officers as individuals who possess the capacity to assimilate advanced training and to in turn function as the weapons expert in their unit. The curriculum consists of 232.5 hours of academic work supported by 53.4 hours of related flight activity (each sortie requires 6 hours of additional time for such activity as planning, briefing and critique) and 6 hours of device (simulator) training. Classes are very small (approximately 6 students) adequate instructional equipment in the form of training devices as well as operational aircraft are readily available. Experienced academically qualified faculty on long term assignment are involved in the presentation of the educational program. Emphasis is placed on avionics and systems that support the weapons delivery, the procedures for initiating equipment and tactical changes, the potential engine threat capability and the tactics available for effective weapons employment.

Credit Recommendation: In the graduate degree category, 3 semester hours in applied aerodynamics (high performance aircraft), 3 in advanced aircraft systems and components, 3 in computer applications, and 3 in instructional methodology (3/88).

AF-1704-0194

CIVIL AIR PATROL SCANNER BY CORRESPONDENCE

Course Number: 01230A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/81–Present.

Learning Outcomes: Upon completion of the course,the student will be able to systematically scan a specified area for prolonged periods of time while maintaining concentration and accurately identifying specific objects.

Instruction: This is a supervised self-paced extension course covering scanning techniques, aircraft identification, and aircraft familiarization.

Credit Recommendation: Credit is not recommended due to the limited and military-specific nature of the content (10/88).

AF-1704-0195

CIVIL AIR PATROL MISSION OBSERVER LEVEL II BY CORRESPONDENCE

Course Number: 02130B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/81-Present.

Learning Outcomes: Upon completion of the course, the student will be able to assume the duties of a mission observer coordinating the rescue operations under the leadership of the pilot.

Instruction: This is a supervised self-paced extension course covering search planning, electronic search, navigation assistance; navigation elements; the grid systems for locating position; navigational aids which are primarily automatic direction finding devices and very high frequency omnirange devices; communication techniques; nonverbal signals, weather condition and aircraft familiarity.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in visual navigation (10/88).

AF-1704-0196

INTRODUCTION TO CIVIL AIR PATROL EMERGENCY SERVICES BY CORRESPONDENCE

Course Number: 02130D.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84-Present.

Learning Outcomes: Upon completion of the course, the student will be able to initiate, operate, and terminate an emergency service mission.

Instruction: This is a supervised self-paced extension course covering the operating concepts, policies, and procedures which govern supervisory, ground and flight personnel when performing civil air patrol emergency services.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (10/88).

AF-1704-0197

FLIGHT ENGINEER SPECIALIST (HELICOPTER QUALIFIED) BY CORRESPONDENCE

Course Number: 11350B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform, with little or no supervision and with the aid of technical publication, helicopter maintenance procedures. The course includes use of handtools; planning and organization of tasks will be directed by a supervisor who coordinates and monitors efforts of the specialist.

Instruction: The student works under individual supervision and a trainer or training manager to control progress in areas of: maintenance safety; maintenance records and publications; care and use of handtools; aircraft maintenance troubleshooting; and aircraft engines and systems. Included are concentrations with landing gear, flight controls, transmissions, hydraulics, fuel and electrical systems. Planning considerations are given for computation of weight and balance and performance factors (eg., takeoff and landing computations).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in flight engineering principles (10/88).

AF-1704-0198

AIRBORNE COMMUNICATIONS SYSTEMS OPERATOR

Course Number: 11650.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide an accurate, efficient exchange of information between headquarters and field units or between aircraft and their home stations.

Instruction: This is a supervised, self-paced extension course covering communication agencies, command control and communications, the different airborne communications systems; security, radio wave propagation and collection, voice operations and procedures; aviation weather and record communication operation and procedures. Other topics covered are equipment/system inflight and flight line safety, and inspection.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic public communication (10/88).

AF-1704-0199

AIRCREW LIFE SUPPORT SPECIALIST BY CORRESPONDENCE

Course Number: 12250.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/84-Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect and maintain aircrew life support equipment; issue, fit, and adjust aircrew life support and chemical defense equipment; provide life support continuation training to aircrews; and supervise aircrew life support personnel.

Instruction: The student works under individual supervision and a trainer or training manager to control progress in the areas of: industrial shop safety; aircrew survival emergency procedures and techniques; inspection maintenance, and use of aircrew life support and survival equipment; fabrics and composite equipment maintenance and testing; and physiology of flight.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial shop management, and 1 in speech/teaching techniques (10/88).

AF-1704-0200

AIRCRAFT ENVIRONMENTAL SYSTEMS MECHANIC BY CORRESPONDENCE

Course Number: 42351.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/85-Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply specialty knowledge required to perform as aircraft environmental systems mechanics. The student will be capable in field fundamentals, maintenance fundamentals, aircraft familiarization and environmental systems and aircraft oxygen and utility systems.

Instruction: This is a supervised, self-paced extension course covering: maintenance management, maintenance system, publications, forms and records, safety, maintenance of tools and safety devices; general maintenance; elements of physics, AC and DC motor circuits, electrical measuring devices; aircraft familiarization; engine bleed air and aircraft ducting, aircraft air conditioning system, air conditioning pressurization, gaseous oxygen system, liquid oxygen system, liquid oxygen servicing and storage units; utility system.

Credit Recommendation: In the lower-division baccalsureate/associate degree category, 3 semster hours in basic electricity, 3 in aircraft systems (10/88).

AF-1704-0201

AIRCRAFT PNEUDRAULIC SYSTEMS MECHANIC BY CORRESPONDENCE

Course Number: 42354.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to function as a technician for performance of maintenance management; demonstrate knowledge of pneumatics fundamentals, material and equipment, and components and systems.

Instruction: Instruction is self-paced, extention study in: maintenance management, supply, and records; fundamentals of pneudraulics and electricity; pneudraulic system materials, tools, test instruments; ground and shop equipment, hydraulic power supply components; selector valves, actuators, and flow valves; landing gear components; pneudraulic power systems; landing gears and related systems; nose wheel steering and brake system; aircraft flight control; and pneumatic systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in maintenance management, 4 in hydraulics and pneumatics, 3 in aircraft air conditioning material and processes (10/88).

AF-1704-0202

AIRCRAFT FUEL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 42373.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/85-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform duties in personnel management of specialized fuel systems, as well as perform supervisory functions for fuel systems technicians.

Instruction: Instruction is presented through self-paced extension course in personnel management and supervisory functions; safety and performance evaluation; maintenance data publications; maintenance supply and inspection; refueling and defueling; vent pressurization, troubleshooting, corrosion control, and basic electricity.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance management, 1 in records, forms, and publications, and 3 in basic electricity (10/88).

AF-1704-0203

AIRCRAFT PNEUDRAULIC SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 42374.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/79–5/87.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance and supervise subordinates and inspect, install, troubleshoot, repair and modify aircraft pneumatic systems, hydraulic in-flight refueling systems, and associated aerospace ground equipment.

Instruction: This is a supervised, self-paced extension course covering topics such as determining proper maintenance and repair procedures; and installing, repairing, overhauling, and modifying aircraft pneumatic in-flight refueling and hydraulic systems; and pneumatic and hydraulic ground support equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in advanced hydraulic systems (10/88).

AF-1704-0204

TURBOPROP PROPULSION MECHANIC BY CORRESPONDENCE

Course Number: 42653.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform effective maintenance as a turboprop propulsion mechanic to include general turboprop engine operation, turboprop equipment and engine system, turboprop engine maintenance, turboprop operation, turbopropeller maintenance, and helicopter and OV-10 propulsion systems.

Instruction: Topics include turboprop engine principles, engine reduction gear box and compressor section construction, turboprop engine combustion and turbine section construction, small gas turbine engines, engine inspection, maintenance forms and records, tools and equipment, ground equipment, fuels and fuel systems, oils and oil systems, engine instruments and indicating systems, general engine maintenance, engine assembly and disassembly, engine removal, troubleshooting of engine systems, engine testing, turbopropeller construction and operation, electrical principles, maintenance of turbopropeller and propeller control systems maintenance, turboshaft engine construction on various types of turboshaft engines to include turboprop propulsion system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in turbopropeller, 4 in gas turbine engines and operation (10/88).

AF-1704-0205

F-100 JET ENGINE MECHANIC BY CORRESPONDENCE

Course Number: 42654.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform effective maintenance in the area or jet propulsion to include: management, jet engine mechanic operating principles, maintenance practices and procedures, associated jet engine systems, operation and adjustment of jet engine.

Instruction: This is a supervised, self-paced extension study course in: responsibilities and supply authorization; publications; jet operation, engine construction, tools and hardware; maintenance and inspection systems and forms; corrosion control; support equipment; engine and start system troubleshooting; and test equipment, engine removal and installation, engine operating, and testing of the jet fuel starter and gearbox.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in gas turbine theory and operation (10/88).

AF-1704-0206

HELICOPTER MECHANIC BY CORRESPONDENCE

Course Number: 43150.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance and supervise subordinates in ground handling, inspection repair, and maintenance of the H-1, H-3, and H-53 helicopters including powerplants and related equipment.

Instruction: This is a supervised, self-paced extension course covering topics of job relates information on Air Force publications, technical order deficiencies reporting, maintenance concepts, maintenance forms, inventory records, special tools, airframe construction, helicopter markings, helicopter aerodynamics, ground handling, corrosion control, cleaning and specific information on testing inspection repair, alteration and maintenance of the H-3 and H-53 helicopters systems, engine operation and construction features.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in general helicopter mechanics, 3 in advanced helicopter systems, and 3 in helicopter powerplants (10/88).

AF-1704-0207

HELICOPTER MECHANIC (FULLY ARTICULATED ROTOR) BY CORRESPONDENCE

Course Number: 43150C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/85–2/87.

Learning Outcomes: Upon completion of the course, the student will be able to perform duties as helicopter technician; have precise knowledge of servicing and maintaining the helicopter systems based on prior knowledge of the helicopter structure and systems. The student can inspect, service, and maintain helicopter systems.

Instruction: Supervised self-paced extension course in landing gear and brake systems, hydraulic system, electrical system and utility systems, instrument systems, engine principles and construction, fuel supply system, engine system, engine operation and maintenance, transmission and drive system, rotor system and flight controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in hydraulics, 2 in aircraft systems, 2 in aircraft alignment, 1 in powerplant systems, and 3 in gas turbine operation and maintenance (10/88).

AF-1704-0208

HELICOPTER MECHANIC (SEMIRIGID ROTOR) BY CORRESPONDENCE

Course Number: 43150D.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/85–2/87.

Learning Outcomes: Upon completion of the course, the student will be able to perform general helicopter maintenance in airframe construction; will know inspection and maintenance techniques, ground handling, and special maintenance.

Instruction: Covers ground handling and special maintenance, aircraft fuel system, engine principles and systems, engine operation and maintenance, transmission and drive system, flight control system, rotor system, hydraulic system, rotor system, electrical system, and instrument system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in engines operation and maintenance principles, and 3 in hydraulics flight controls and instruments (10/88).

AF-1704-0209

STRATEGIC AIRCRAFT MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 43152A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/82–Present.

Learning Outcomes: Upon completion of the course, the student will understand the principles of operation of major aircraft systems (eg. pneumatic, hydraulic, fuel, electrical) and jet engines. Additionally, the student have the foundation to plan and organize maintenance efforts with the use of technical publications, basic troubleshooting techniques and supervision of related specialist activities.

Instruction: The student works under individual supervision and a trainer or training manager to control progress in areas of: technical publications; maintenance and inspection concepts; basic tools and maintenance materials; aircraft maintenance supply system and ground support equipment. Major airframe systems, aircraft and ground handling are also covered. The course includes, in greater detail, the principles of operation and service of the following systems: pneumatic, hydraulic, landing gear, flight controls, fuel, and electrical.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance management, 1 in aircraft systems (10/88).

AF-1704-0210

STRATEGIC AIRCRAFT MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 43152J.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/86–Present.

Learning Outcomes: Upon completion of the course, the student understand the principles of major aircraft systems (eg. pneumatic, hydraulic, fuel, electrical) and jet engines. Additionally, the student will have the foundation to plan and organize maintenance efforts with the use of technical publications, basic troubleshooting techniques, and supervision of related specialists activities.

Instruction: The student works under individual supervision and a trainer or training manager to control progress in the areas of: technical publications, maintenance and inspection concepts, basic tools and maintenance materials. Aircraft maintenance supply systems and ground support equipment are covered as are major airframe systems, and aircraft and ground handling. The principles of operation and service of the following systems: pneumatics, hydraulics, landing gear, flight controls, fuel and electrical.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance management, and 1 in aircraft systems (10/88).

AF-1704-0211

STRATEGIC AIRCRAFT MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 43152Z.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/82-Present.

Learning Outcomes: Upon completion of the course, the student will understand principles of operation of major aircraft systems (eg. pneumatics, hydraulics, fuel, electrical) and jet engines. Additionally, the student will have the foundation to plan and organize maintenance efforts with the use of technical publications, basic troubleshooting techniques and supervision of related specialists activities.

Instruction: The student works under individual supervision and a trainer or training manager to control progress in areas of: technical publications, maintenance and inspection concepts, basic tools and maintenance materials, aircraft maintenance supply system and ground support equipment, major airframe systems, and aircraft and ground handling. In greater detail, the course covers principles of operation and and service of the following systems: pneumatic, hydraulic, landing gear, flight controls, fuel and electrical.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance management, 1 in aircraft systems (10/88).

AF-1704-0212

HELICOPTER TECHNICIAN (FULLY ARTICULATED ROTOR) BY CORRESPONDENCE

Course Number: 43170C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/83-4/87.

Learning Outcomes: Upon completion of the course, the student will be able to perform duties as a helicopter technician and to supervise helicopter inspection, helicopter maintenance and aircraft forms and records.

Instruction: This is a supervised self-paced extension course in supply, personnel management and supervisory functions, and in publications, aircraft forms and records, ground handling and general maintenance, helicopter powerplant and fuel systems, helicopter transmissions and drive systems, maintenance of landing gear and hydraulic system, maintenance of rotor and flight control system, and inspection.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance management, 1 in records, forms and publications, and 4 in powerplant operation (10/88).

AF-1704-0213

HELICOPTER TECHNICIAN (SEMIRIGID ROTOR) BY CORRESPONDENCE

Course Number: 43170D.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/83-2/87.

Learning Outcomes: Upon completion of the course, the student will be able to perform as a helicopter technician and supervise helicopter inspection, helicopter maintenance, and aircraft records.

Instruction: This is a supervised self-paced extension course in personnel management and supervisory functions; publications and aircraft records; inspection and maintenance procedures; ground handling; aircraft hardware; maintenance of powerplant and fuels systems; operation and maintenance of transmission and drive system; maintenance of utility and electrical systems; and maintenance of rotor and flight controls.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance management, 1 in records, form and publications, 3 in aircraft powerplant operations, and 3 in basic hydraulics (10/88).

AF-1704-0214

APPRENTICE AIRFIELD MANAGEMENT SPECIALIST BY CORRESPONDENCE

Course Number: 27131.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to have a basic level of understanding of duties related to an entry level in the National Training System. The individual will be able to log information on flights (departing/arriving), maintain flight information and planning data with little direct supervision.

Instruction: Course is self paced independent study to be completed in no more than 52 weeks. Intermediate open book exams are utilized for individualized progress checks. A comprehensive final exam is administered under a control testing environment and must be satisfactorily completed. Material is studied in conjunction with supervised on-the-job training. Includes introduction of material pertaining to basic air traffic control and flight service station duties, as well as specific and general tasks related to the individuals assignment to this entry level of the Avisory System.

Credit Recommendation: In the vocational certificate category, 2 semester hours in traffic control (terminology and procedures) (12/89).

AF-1704-0215

AIRFIELD MANAGEMENT SPECIALIST

Course Number: 27151.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 11/83-Present.

Exhibit Dates: Maximum 52 weeks.

Learning Outcomes: Upon completion of the course, the student will be able to assist flight crew members with preparation of documents required for flight operations. An understanding of aeronautical charts and publications will be needed to monitor and document aircraft movement (departing/arrival). A basic understanding of supervisory practices will be achieved to assist in on-the-job training of subordinates.

Instruction: Covers an introduction to duties related to aircraft dispatching. Individual tasks and subject areas pertain to basic aviation weather, airport operations.

Credit Recommendation: 1 semester hour in introduction to aircraft dispatching (12/89).

AF-1704-0216

COMBAT CONTROL OPERATOR BY CORRESPONDENCE

Course Number: 27350.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/88-Present.

Learning Outcomes: Upon completion of the course, the student who as a prerequisite must have completed basic air traffic control training prior to entering this course, will be qualified for upgrading to a skill level five (skilled) controller. In addition student will have competency in the tactical aspects of the material covered in the Combat Control School Program.

Instruction: Instruction is accomplished through correspondence course methods. The course includes topics related to FAA, ICAA and military aircraft navigation and control. Included are such areas as basic flight regulations, weather, navigation, airway/route and terminal non radar approaches. A portion of the program is devoted to communication techniques and equipment common to A.T.C. utilization. Approximately one half of the study hours involve tactical equipment specific to the tasks assigned to this military specialty.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in air traffic control (12/89).

AF-1704-0217

COMMAND AND CONTROL SPECIALIST BY CORRESPONDENCE

Course Number: 27450.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89-Present.

Learning Outcomes: Upon completion of the course, the student will have a breadth of knowledge pertinent to function as a command post controller. Completion of this course culminates the resident air traffic controller training required by the airman in the control center, who is qualified to assume the responsibilities of the controller.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. This consists of a review of related technician publications, filing and record keeping, information, cyptographic and physical security methods, flight operations, basic weather and computer applications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in air traffic control (12/89).

AF-1704-0218

INTEGRATED AVIONICS ATTACK CONTROL SYSTEMS SPECIALIST (F-15) BY CORRESPONDENCE

Course Number: 32656B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/84–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the fundamentals and operation of avionics combat control and navigation systems.

Instruction: The student will receive instruction concerning aircraft familiarization, basic navigation, inertial navigation systems, radar principles and operation.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/89).

AF-1704-0219

INTEGRATED AVIONICS ATTACK CONTROL SYSTEMS SPECIALIST (F-16) BY CORRESPONDENCE

Course Number: 32656C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/85–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the fundamentals of operation of avionic fire control, navigation and radar systems.

Instruction: Student will receive instructions concerning aircraft familiarization, fire control/navigation and control radar.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0220

INTEGRATED AVIONICS COMMUNICATION, NAVIGATION, AND PENETRATION AIDS SYSTEMS SPECIALIST (F-16) BY CORRESPONDENCE

Course Number: 32658C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/84–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the fundamentals and operation of basic electronic and avionic communication and navigation systems.

Instruction: The student will receive instruction concerning aircraft familiarization, aircraft communication systems, navigation systems and electronic identification systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/89).

AF-1704-0221

AIRCRAFT ELECTRO-ENVIRONMENTAL SYSTEM TECHNICIAN BY CORRESPONDENCE

Course Number: 45070.

Location: Extension Course Institute, Gunter, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to conduct maintenance on aircraft using correct ground safety practices, maintenance publications, and hand tools, and will be able to service and maintain the battery and electrical systems using the correct test equipment.

Instruction: Through correspondence, the student will receive information on aircraft ground safety, maintenance publications, inspection fundamentals, hand tools and soldering, basic electricty and batteries, and the use of the volt-UHM Meter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in in aircraft maintenance, 1 semester hour in a course in aircraft maintenance management (12/89).

AF-1704-0222

AIRCRAFT ELECTRO-ENVIRONMENTAL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45070A.

Location: Extension Course Institute, Gunter, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify the basic operation of the AC and DC power systems found in the aircraft; the basic layout of the trim system, flap system, fuel system, powerplant electrical system, warning systems, and steering system.

Instruction: Through correspondence the student will receive basic knowledge of the operation of the aircraft electrical generation system, fuel sytem, utility system, warning systems, and steering system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0223

AIRCRAFT ELECTRO-ENVIRONMENTAL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45070B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and correct faults in the engine bleed air system, aircraft air conditioning systems, cabin pressurization systems, fire detection and extinguishing systems, oxygen systems, and utility systems (life raft, liquid cycle refrigeration), and will be able to supervise others in the maintenance and repair of the above systems.

Instruction: Through correspondence the student will receive information on engine bleed air systems, aircraft air conditioning, cabin pressurization and oxygen systems, fire protection systems, and utility systems (life raft, liquid cycle refrigeration).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft maintenance (12/89).

AF-1704-0224

F/FB-111 AVIONICS MANUAL/ELECTRONIC COUNTERMEASURES (ECM) TEST STATION AND COMPONENT SPECIALIST BY CORRESPONDENCE

Course Number: 45156B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the fundamentals of electronics and operation of electronic counter measures test equipment and components.

Instruction: The student will receive instruction concerning electronic principles, micro computer operation, maintenance management and inspection proceedures and electronic testing equipment and proceedures.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0225

INTEGRATED AVIONICS COMMUNICATIONS, NAVIGATION, AND PENETRATION AIDS SYSTEMS SPECIALIST (F-15) BY CORRESPONDENCE

Course Number: 45251C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/89–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the operating principles of avionics communications and navigation systems and the electronic principles involved.

Instruction: The student will receive instruction concerning basic electronic principles, communication, navigation and electronic identification principles.

Credit Recommendation: Credit is not recommeded because of the military-specific nature of the course (12/89).

AF-1704-0226

INTEGRATED AVIONIC INSTRUMENT AND FLIGHT CONTROL SYSTEMS SPECIALIST BY CORRESPONDENCE

Course Number: 45252B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/89–Present.

Learning Outcomes: Upon completion of the course, the student will have the knowledge necessary to perform maintenance on the integrated avionic instrument and flight control systems incorporated in the F-16 aircraft.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content areas includes a treatment of the integrated aerodynamic control system for the F-16 aircraft. Individual systems are reviewed including electrical and hydraulic power, air conditioning and pressurization, engine instrumentation, fuel quantity, navigation aids, the flight environment system and inflight recorder, and system diagrams. Check out techiques and troubleshooting are considered. Safety measures relative to fuels, engine, radiation, and egress systems as well as work pertinent to these and their attendant maintence hazards are stressed.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft instrument and flight control maintenance (12/89).

AF-1704-0227

Integrated Avionic Instrument and Flight Control Systems Specialist by Correspondence

Course Number: 45253B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89-Present.

Learning Outcomes: Upon completion of the course, the student will have the basic and general knowledge to perform maintenance and troubleshooting on the engine, airframe and instruments and their related systems. In addition, the student will have the ability to perform maintenance on the integrated flight control system and its components.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Pressure, temperature and quantity instruments relative to the F-111 aircraft are presented as are their systems: navigation equipment including instruments, sensors, systems and supporting testing devices are enumerated. Airborne signal data recording and engine air induction as applied to this aircraft are analyzed. The integrated flight control system and its related components including the autopilot are covered - both troubleshooting and maintenance aspects are emphasized.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft instrument and flight control maintenance (12/89).

AF-1704-0228

Tatical Aircraft Maintenance Technician by Correspondence

Course Number: 45274.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/89-Present.

Learning Outcomes: Upon completion of the course, the student will understand the basic construction and maintenance requirements for a tactical aircraft and will understand ground safety, aircraft corrosion control, battle damage repair, and ground handling of aircraft. The student will have a basic knowledge of aircraft pneudraulics, and landing gear systems. Student will have a basic understanding of engines, fuel systems, electrical systems, and environmental control systems for aircraft.

Instruction: Through correspondence the student will receive basic information on aircraft ground handling, aircraft electrical, pneudraulic, and landing gear systems, engine construction and theory of operation, engine electrical systems, fuel systems, and utility systems (environmental control, fire protection, ice and rain removal).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft maintenance (12/89).

AF-1704-0229

Aerospace Propulsion Technician (Jet Engine) by Correspondence

Course Number: 45470A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/89-Present.

Learning Outcomes: Upon the completion of the course, the student will be familiar with the construction of Jet Engines of conventional and modular design and become familiar with the tools and hardware required for engine overhaul. Student will gain knowledge necessary for engine evaluation during overhaul in the areas of inspection, measurement and corrosion control. Student will understand the engine fuel system, oil system, start and electrical systems, bleed air system, after burner, thrust reverse, and constant speed drive. Student will be able to perform engine test runs using calibration instruments to adjust the engine, and will be able to remove and install the engine in the airframe. Student will gain knowledge on engine noise suppression; be able to troubleshoot the engine before overhaul, and will become familiar with the construction and maintenance of the auxiliary power unit.

Instruction: Through correspondence the student will receive information on engine operation, construction, tools and hardware, and support equipment for overhaul and repair. Student receives information on the fuel, oil, start and electical, bleed air, after burner, thrust reverse, constant speed drive, and relationships of these systems. Also covered is information on engine testing, test instruments, adjustments to engine systems, noise suppression, and the removal and installation of the engine in the airframe. Student learns about engine troubleshooting and the auxiliary power unit.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in jet engine maintenance (12/89).

AF-1704-0230

Aircraft Pneudraulic Systems Technician by Correspondence

Course Number: 45474.

Location: Extension Course Institute, Gunter, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89-Present.

Learning Outcomes: Upon completion of the course, the student will understand the theory of hydraulic systems, electric motors and generators and related components, and will gain basic knowledge of the construction of fluid lines using hose and tubing. Student will know the operation of hydraulic test equipment and will learn the basic operation of hydraulic power systems, landing gear systems, flight control systems, pneumatic systems, inflight refueling systems, and cargo door and ramp operating systems.

Instruction: Through correspondence the student will receive information on pneudraulic system theory and maintenance, troubleshooting, repair and testing. Course covers the hydraulic power, landing gear, flight control, pneumatic, inflight refueling, and cargo door and ramp systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance course (12/89).

AF-1704-0231

Aircraft Pneudraulic Systems Technician by Correspondence

Course Number: 45474A.

Location: Extension Course Institute, Gunter, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform maintenance on aircraft landing gear, flight control, cargo and ramp door systems and jack the aircraft for landing gear maintenance, and will be able to inspect aircraft wheels and tires for defects.

Instruction: Through correspondence the student will learn about aircraft landing gear, flight control, cargo and ramp door, jacking, and wheel and tire systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0232

Avionic Guidance and Control Systems Technician by Correspondence

Course Number: 45571A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/89-Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot or supervise the troubleshooting of avionics guidance and control systems of USAF aircraft including compass, attitude heading reference, stability augmentation, automatic flight control and digital automatic flight control systems and utilize the MC-1 compass calibrator set.

Instruction: Includes system operation, inspections, operational checks, troubleshooting and bench check of compass system, attitude heading reference system, stability augementation system, components, repair of avionics system malfunctions and MC-1 autopilot system operation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0233

Guidance and Control Systems Technician by Correspondence

Course Number: 45571B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/89-Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot or supervise the troubleshooting of avionics guidance and control systems of USAF aircraft compass, attitude heading reference, stability augmentation, automatic flight control and digital automatic flight control systems and utilize the MC-1 compass calibrator set.

Instruction: Includes system operation, inspections, operational checks, troubleshooting and bench check of compass system, attitude heading reference system, stability augmentation system and automatic flight control system, components, repair of avionics system malfunctions and MC-1 autopilot system operation.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0234

Avionics Guidance and Control Systems Technician by Correspondence

Course Number: 45571C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot or supervise the troubleshooting of avionics guidance and control systems of USAF aircraft compass, attitude heading reference, stability augmentation, and automatic flight control systems and utilize the MC-1 compass calibrator.

Instruction: Covers basic of the aircraft compass systems including system operation, inspections, operational checks and launch check of compass, attitude heading reference, stability augmentation and automatic flight control system component operation, setup, measuring compass errors, magnetic survey, and compass serveying procedures.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0235

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45571D.

Location: Extension Course Institute, Gunter, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/88–Present.

Learning Outcomes: Upon completion of the course, the student will display an updated understanding of avionics instrument systems including position, engine, fuel quantity indicating, flight data recording, central air data and flight director systems, vertical scale flight instrument and flight and navigational aids.

Instruction: Course includes a review of the theory and operation of the above cited systems in order to enhance the technician's ability to maintain the systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0236

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45517E.

Location: Extension Course Institute, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/88–Present.

Learning Outcomes: Upon completion of the course, the student will display an updated understanding of avionics instrument systems including position, engine, fuel quantity, flight loads data recording, basic flight, central air data and flight director systems and flight and navigational aids.

Instruction: Includes a review of the theory and operation of the above listed systems in order to enhance the technician's ability to maintain the system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0237

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45571F.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/88–Present.

Learning Outcomes: Upon completion of the course, the student will better understand avionics instrument systems previously learned through training and experience.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content includes a review of elementry aspects of: Solenoid, selsyn and synchro systems operation, engine indicating systems (tachometer, temperature, fuel flow, pressure); fuel quantity indicators (resistance, capacitance, maintenance); flight data records; pilot-static systems; altitude encoders; Central SINS Data Computers; angle-of-attack and flight director systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0238

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45571G.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/89–Present.

Learning Outcomes: Upon completion of the course, the student will demonstrate a fundamental knowledge of concepts related to avionic navigation systems. This course is an extension to training and experience previously acquired.

Instruction: Fundamentals of computer programming and hardware; navigation and computer elements; inertial operation principles; fuel savings advisory systems.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0239

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45571H.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/89–Present.

Learning Outcomes: Upon completion of the course, the student will understand the basic principles of navigation and computer elements and will have become familiar with the basic conceptsof computer function and data storage. Student will learn thebasic operation of inertial navigation systems and doppler navigation systems and the role these systems play in the fuel savings advisory system.

Instruction: Through correspondence the student will gain knowledge of navigation, computer function and data storage, inertial and doppler navigation systems, and fuel savings advisory systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in avionics (12/89).

AF-1704-0240

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45571J.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/89–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend basic navigation, operate gyroscopes and solve navigation problems, and will understand computer navigation operations.

Instruction: The student will receive instructions concerning basic, trigonometric and computer navigation and the operations of gyroscope and accellerometer systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic navigation principles (12/89).

AF-1704-0241

AVIONICS GUIDANCE AND CONTROL SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45571K.

Location: Extension Course Institute Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/88–Present.

Learning Outcomes: Upon completion of the course, the student will better understand weapon control and monitoring systems, television transmission and heads-up-displays.

Instruction: The student will receive instructions concerning weapons control and monitoring, thru review, television transmission and heads-up-display systems in the A-10.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (12/89).

AF-1704-0242

COMMUNICATION/NAVIGATION SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45572A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair and maintain and supervise the repair and maintenance of aerial communications/navigation systems.

Instruction: Introduction to avionics maintenance and repair procedures and safety practices, administration of aviation electronics maintenance program, basic grounding in electronics and utilization of electronics test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in avionics maintenance (12/89).

AF-1704-0243

COMMUNICATION/NAVIGATION SYSTEMS TECHNICIAN BY CORRESPONDENCE

Course Number: 45572B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain and repair aerial communications, intercommunications and direction-finding equipment.

Instruction: Introduction to intercommunication equipment, communication systems, modulation, detection, mixing, receivers high-frequency receivers, VHF and UHF transceivers, UHF DF and emergency communications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in avionics maintenance (12/89).

AF-1704-0244

Communication/Navigation Systems
Technician by Correspondence

Course Number: 45572C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to repair and maintain aerial electronic navigation equipment, precision landing equipment, electronic aircraft terrain clearance, and identification equipment.

Instruction: Introduction to electronic aerial direction, distance-finding and landing equipment and theory and principles of radar in aircraft height-finding and identification.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1704-0245

Communication/Navigation System
Technician by Correspondence

Course Number: 45572D.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/89–Present.

Learning Outcomes: Upon completion of the course, the student will understand the functions of airborne radars and the three special functions of the AN/APN-59E search and weather radar.

Instruction: Introduction to basic radar theory, nomenclature, phraseology and the functional capabilities of the AN/APN-59E airborne radar in its three modes of operation.

Credit Recommendation: Credit is not recommended because o the limited, specialized nature of the course (12/89).

AF-1704-0246

Communication/Navigation Systems
Technician by Correspondence

Course Number: 45572E.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to understand the theory and the operation, capabilities, limitations of and the necessity for doppler navigation systems in high-speed aircraft.

Instruction: Introduction to traditional basic navigation, analog computer elements, doppler principles and techniques, doppler receiver transmitter theory, frequency tracker and components, antenna, indicator, tracker, doppler navigation computer and the common strategic doppler.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in avionics maintenance (12/89).

AF-1704-0247

Strategic Aircraft Maintenance
Specialist by Correspondence

Course Number: 45750.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/89–Present.

Learning Outcomes: Upon completion of the course, the student will understand the basic construction and maintenance requirements for strategic aircraft, ground safety, aircraft corrosion control, battle damage repair, and ground handling of aircraft. The student will have a basic knowledge of aircraft pneudraulics, and landing gear systems and will also have a basic understanding of engines, fuel systems, electrical systems, and environmental control systems for aircraft.

Instruction: Through correspondence the student will receive basic information on aircraft ground handeling, aircraft electrical, pneudraulic, and landing gear systems, engine construction and theory of operation, engine electrical systems, fuel systems, and utility systems (environment control, fire protection, ice and rain removal).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft maintenance (12/89).

AF-1704-0248

Offensive Avionics Systems Specialist
(B-1B) by Correspondence

Course Number: 45753A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/89–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the fundamental operation of offensive avionics systems, maintenance and material management and basic aircraft familiarization.

Instruction: The student will receive instruction concerning avionics system maintenance, organizational maintenance, electronic multiplexing and integrated testing systems and navigation display systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aviation maintenance management (12/89).

AF-1704-0249

Airlift Aircraft Maintenance
Technician by Correspondence

Course Number: 45772.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/89–Present.

Learning Outcomes: Upon completion of the course, the student will understand the basic construction and maintenance requirements for airlift aircraft, ground safety, aircraft corrosion control, and ground handling of aircraft. The student will gain a basic knowledge of aircraft Pneudraulics, and landing gear systems, and will also gain a basic understanding of engines, fuel systems, electrical systems, and environmental control systems for aircraft.

Instruction: Through correspondence the student will receive basic information of aircraft ground handling, aircraft electrical, pneudraulic, and landing gear systems, engine construction and theory of operation, engine electrical electrical systems, fuel systems, and utility systems (environmental control, fire protection, ice and rain removal).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft maintenance (12/89).

AF-1704-0250

Structural Maintenance Technician
by Correspondence

Course Number: 45872B

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify types of corrosion, select correct removal methods and replace protective coatings to aircraft components, and will be able to select correct cleaning methods to prevent further corrosive attack on aircraft components.

Instruction: Through correspondence the student will receive information on identification of corrosion, methods of treatment to remove corrosion, preparation of surfaces for organic coating to prevent corrosion, and cleaning aircraft to prevent the formation of corrosion.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft maintenance (12/89).

AF-1709-0001

Precision Photographic Processing
Technician

(Precision Photographic Processing Control)

(Precision Photographic Processing Control Technician)

Course Number: AAR23470; OZR2335; OZR2334; AAR23271.

Location: Lowry Technical Training Center, Lowry AFB, CO.

Length: 13 weeks (390–402 hours).

Exhibit Dates: 7/62–5/68.

Objectives: To train enlisted personnel in precision photographic processing.

Instruction: Lectures and practical experience in statistics, photographic image evaluation, laboratory management, and the chemistry, kinetics, and mechanics of the photographic process.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in precision photographic processing laboratory (12/68).

AF-1709-0002

Combat Still Photographer, Operator

Course Number: 2ASR23651-003.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 13 weeks (480 hours).

Exhibit Dates: 8/68–12/73.

Objectives: To train military personnel in the photographic skills necessary for handling a variety of cameras and photographic situations.

Instruction: Lectures and practical experience in the fundamentals of photography, photographic exposures, laboratory processing and printing, aerial film processing, and production processing and printing; journalistic applications to photography; and optics, light, color, filters, chemistry, and light techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photography (12/73).

AF-1709-0004

Still Photojournalism
(Still Photo Journalism)

Course Number: 3AZR23651.

Location: Lowry Technical Training Center, Lowry AFB, CO.

Length: 6 weeks (180 hours).

Exhibit Dates: 7/72–12/73.

Objectives: To train enlisted personnel to work as still photojournalists with information offices.

Instruction: Lectures and practical experiences in the journalistic process, including information acquisition techniques, elements of style, human relations, and legal and ethical aspects; camera and processing systems, including camera function, processing, composition, and practical exercises; a job-oriented workshop including picture story, personality feature, small groups, spot news, sports, and a final project.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photojournalism (12/73).

AF-1709-0005

Aerial Photographer

Course Number: AB23130.

Location: 3415th Technical Training Group, Lowry AFB, CO.

Length: *Version 1:* 19 weeks (570 hours). *Version 2:* 29 weeks (432 hours).

Exhibit Dates: *Version 1:* 12/54-12/68. *Version 2:* 3/54-11/54.

Objectives: To train enlisted personnel to install, inspect, and operate aircraft cameras and related equipment.

Instruction: Lectures and practical experiences in principles of electricity, AC and vacuum tubes, and circuits; oscilloscope; mechanics; fundamentals of photography; aerial photography; maintenance; reconnaissance photography; oblique photography; and color photography.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in aerial photography (12/68). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in aerial photography, 2 in electricity and electronics (12/68).

AF-1709-0006

Precision Photographic Services
Officer

Course Number: *Version 1:* 3OBR2331. *Version 2:* OBR2331.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 18 weeks (540 hours). *Version 2:* 21 weeks (630 hours).

Exhibit Dates: *Version 1:* 5/68-12/73. *Version 2:* 5/67-4/68.

Objectives: To train officers to supervise precision photographic services laboratories.

Instruction: Lectures and practical experience in statistics, photographic chemistry, laboratory functions, image reproduction and evaluation, precision photographic processing, and management of photographic installations.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in graphic arts (12/73). *Version 2:* In the upper-division baccalaureate category, 5 semester hours in precision photographic processing laboratory, and credit in elementary statistics on the basis of institutional evaluation (12/68).

AF-1709-0010

1. Still Photographer
   (Photographer)
2. Still Photographer

Course Number: *Version 1:* ABR23230. *Version 2:* AB23230; ABR23230.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 18 weeks (510 hours). *Version 2:* 14 weeks (390 hours).

Exhibit Dates: *Version 1:* 4/61-12/68. *Version 2:* 3/58-3/61.

Objectives: To train personnel to perform as photographers.

Instruction: Lectures and practical experiences in the operation and care of cameras and laboratory equipment, and in exposing and processing black and white and color film.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in photographic processing laboratory (12/68). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in photographic processing laboratory (12/68).

AF-1709-0011

Film Cutting Specialist
(Sound and Picture Editing Specialist)

Course Number: AB23331.

Location: 3415th Technical Training Group, Lowry AFB, CO.

Length: 8 weeks (240 hours).

Exhibit Dates: 3/55-12/68.

Objectives: To provide trainees with the knowledge and skills necessary for editing silent and sound motion picture film.

Instruction: Fundamental editing procedures, including operation of 16mm projectors, splicing motion picture film, operation of the silent viewer (moviola), assembly of a motion picture work-print, the principles and techniques of matching action, matching original negatives, and establishing and re-establishing techniques; elementary editing techniques, including cut-ins and cutaways, build-up and continuity, special effects, splicing 35mm film, use of 35mm viewer, editing 35mm film; editing techniques for sound film, including introduction to single and double system sound and the use of sound viewers, editing single and double system sound, matching sound and picture negative to work prints; advanced editing techniques, including music and sound effects, introduction to lip synchronization, and preparation of a complete motion picture film.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in film (12/73).

AF-1709-0013

Photogrammetric-Cartographic
Technician
(Advanced Photogrammetric Cartographic)

Course Number: AAX22170.

Location: Aeronautical Chart and Information Center, St. Louis, MO.

Length: 9 weeks (301 hours).

Exhibit Dates: 7/64-12/68.

Objectives: To train enlisted personnel in cartographic techniques applied to photographic and physiographic techniques.

Instruction: Lectures and practical exercises in photogrammetric mathematics, projection, photogrammetric equipment and related functions, regional physiography, grids, geodesy, target material reliability determination and reconnaissance systems, and cameras.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photogrammetry (12/68).

AF-1709-0014

Imagery Interpretation

Course Number: 3AZR20650-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 12 weeks (360 hours).

Exhibit Dates: 1/69-12/73.

Objectives: To train Marines in basic photographic interpretation techniques.

Instruction: Lectures and practical exercises in basic photographic interpretation, including introduction to intelligence, fundamentals of photo and imagery interpretation, photogrammetry, tactical photo interpretation, operational weapons systems, industries, strategic interpretation, multisensor theory and interpretation, and practical exercises.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photographic interpretation (7/74).

AF-1709-0015

Imagery Interpreter Specialist

Course Number: 3ABR20630.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 15 weeks (450 hours).

Exhibit Dates: 7/70-12/73.

Objectives: To train airmen as imagery interpretation specialists.

Instruction: Lectures and practical exercises in imagery interpretation, including automatic data processing and basic coordinate systems as applied to intelligence, fundamentals of intelligence and air target materials program, photogrammetry, image interpretation fundamentals, tactical and strategic interpretation, basic radar, multisensor interpretation, intelligence data handling systems, mission planning and bombing, and multisensor reporting and radar prediction.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photographic interpretation, 1 in photogrammetry (7/74).

AF-1709-0016

Navy Specialized Imagery
Interpretation

Course Number: 3OZR8041-2.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO; 3415th Technical School, Lowry AFB, CO.

Length: 6-7 weeks (162-210 hours).

Exhibit Dates: 1/71-12/73.

Objectives: To train personnel as imagery interpretation officers.

Instruction: Lectures and practical exercises in Navy specialized imagery interpretation, including vertical and nonvertical photogrammetry, radar operational intelligence, multisensor intelligence, and imagery interpretation (military support subjects).

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photo interpretation (7/74).

AF-1709-0017

Intelligence Photo-Radar Officer

Course Number: OTS8041-1.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 10 weeks (300 hours).

Exhibit Dates: 1/62-12/68.

Objectives: To train personnel in the fundamentals of photographic interpretation.

Instruction: Lectures and practical exercises in the fundamentals of photographic interpretation, including introduction to photo intelligence, photo metrics, aerospace weapons systems, surface transportation and reporting, and advanced aerospace photo intelligence.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photographic interpretation (12/68).

AF-1709-0018

Still Photographic Laboratory Specialist

Course Number: 3ABR23334.
Location: 3415th Technical School, Lowry AFB, CO.
Length: 16-20 weeks (480-570 hours).
Exhibit Dates: 5/68-12/73.
Objectives: To train enlisted personnel to perform as photographic laboratory technicians.
Instruction: Lectures and practical exercises in basic photographic laboratory techniques. Course includes film processing and printing; photocopying; chemistry and quality control; photo laboratory equipment; color slides and color printing; and the use of duplicating equipment.
Credit Recommendation: In the upper-division baccalaureate category, 5 semester hours in still photography (7/74).

AF-1709-0020

Still Photographic Camera Specialist

Course Number: 3ABR23631.
Location: 3415th Technical School, Lowry AFB, CO.
Length: 17-18 weeks (460-540 hours).
Exhibit Dates: 6/68-12/73.
Objectives: To train enlisted personnel as still photographers.
Instruction: Lectures and practical exercises in camera operation, film processing, and printing, including lighting, color negative and slide photography, and the study of photojournalism (including pictorial composition, layouts, and photo stories).
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in photojournalism on the basis of institutional evaluation (7/74).

AF-1709-0021

Intelligence Photo-Radar Officer

Course Number: OBR8041; OBR2041; OB2041; OB2041-1.
Location: 3750th Technical School, Sheppard AFB, TX; 3415th Technical School, Lowry AFB, CO.
Length: 31 weeks (930 hours).
Exhibit Dates: 6/54-12/68.
Objectives: To train officers in direct and indirect aerospace photographic intelligence.
Instruction: Lectures and practical exercises in interpretation, analysis, and evaluation of data from direct and indirect aerospace photographs, including photometrics, terrain analysis and land warfare; aerospace weapons systems, surface transporation, basic industries, fabrication and chemical industries and bomb damage interpretations, weapons employment planning; fundamentals of radar, radar reconnaissance, target prediction and simulation; and mission planning. Includes photographic intelligencereporting and fundamentals of navigation and area radar prediction analysis.
Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in photographic interpretation(12/68).

AF-1709-0022

1. Precision Photoprocessing Specialist
2. Precision Photoprocessing Specialist
   (Precision Photographic Processing Specialist)

Course Number: *All Versions:* 3ABR23430. *Version 2:* ABR23430.
Location: *Version 1:* School of Applied Aerospace Sciences, Lowry AFB, CO. *Version 2:* 3415th Technical School, Lowry AFB, CO.
Length: *Version 1:* 20 weeks (537-600 hours). *Version 2:* 23-25 weeks (660 hours).
Exhibit Dates: *Version 1:* 1/71-12/73. *Version 2:* 9/65-12/70.
Objectives: To train enlisted personnel to be photographic processing specialists.
Instruction: *All Versions:* Lectures and practical exercises in basic chemistry and photographic chemistry, optics and light concepts, advanced contact printing, continuous-film processors, chemical process control, sensitometry and sensitometric curve analysis, densitometers, basic statistical methods, chemical analysis and solution certification and correction, exposure effects and photosensitive material structure, aerial film handling, printer systems and control, and color processes. *Version 1:* Instruction emphasizes photographic chemistry. *Version 2:* Instruction emphasizes statistical methods, color processes, and cleanroom technology.
Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in precision photographic processing laboratory, and credit in elementary statistics on the basis of institutional evaluation(7/74). In the upper-division baccalaureate category, 5 semester hours in precision photographic processing, and credit in elementary statistics on the basis of institutional evaluation (12/68).

AF-1709-0023

Precision Photoprocessing Specialist
(Precision Photographic Processing Specialist)

Course Number: 3ALR23430-1; ALR23430-1; ALR23231.
Location: 3415th Technical School, Lowry AFB, CO.
Length: 9-11 weeks (270-330 hours).
Exhibit Dates: 7/62-12/73.
Objectives: To train enlisted personnel in precision photographic processing.
Instruction: Lectures and practical exercises in precision photographic processing, including logarithms, slide rule, sensitometry and densitometry, curve construction and evaluation, basic photographic chemistry, cleanroom principles, printers and Versamat operation, film cleaning and titling, photographic imagery evaluation, and multiduplication.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in precision photographic processing, and credit in elementary statistics on the basis of institutional evaluation (12/68).

AF-1709-0024

Precision Photographic Processing Techniques

Course Number: OZR2331.
Location: 3415th Technical School, Lowry AFB, CO.
Length: 9 weeks (270 hours).
Exhibit Dates: 9/63-12/68.
Objectives: To train officers in photographic processing techniques.
Instruction: Lectures and practical exercises in photographic processing techniques, including sensitometric control principles and procedures, photographic chemistry principles, statistical and mathematical functions, precision equipment and evaluation procedures, and precision control techniques.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in precision photographic processing, and credit in elementary statistics on the basis of institutional evaluation (12/68).

AF-1709-0025

Motion Picture Laboratory Specialist

Course Number: 3ABR23332.
Location: 3415th Technical School, Lowry AFB, CO.
Length: *Version 1:* 11-14 weeks (330-420 hours). *Version 2:* 17 weeks (480 hours).
Exhibit Dates: *Version 1:* 6/70-12/73. *Version 2:* 2/69-5/70.
Objectives: To provide training in basic motion picture laboratory fundamentals.
Instruction: *Version 1:* Lectures and practical exercises in basic motion-picture photography, sensitometry and densitometry, motion picture printing and processing, quality control and production techniques, and motion picture fundamentals. *Version 2:* Covers the same subjects as Version 1 in greater depth.
Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in motion picture photography (7/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in motion picture photography (7/74).

AF-1709-0026

Still Photographic Officer

Course Number: OB2331.
Location: Air Training Command, Lowry AFB, CO.
Length: 15 weeks (450 hours).
Exhibit Dates: 10/54-12/56.
Objectives: To teach the duties of a unit photographic and laboratory commander and to qualify students to supervise activities of aerial photographers and laboratory technicians.
Instruction: Course includes training in elementary principles of photography, photographic copying, 4x5 camera operation, projection printing, laboratory procedures for aerial photography and field operations, basic aerial photography, advanced aerial photography, charting and mapping, and technical administration.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photographic processing laboratory (12/68).

AF-1709-0027

Imagery Interpreter Specialist by Correspondence

Course Number: 20650.
Location: Extension Course Institute, Gunter AFS, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 1/85-Present.
Learning Outcomes: Upon completion of the course, the student will be able to exploit aerial imagery, assist in the planning of reconnaissance missions, photogrammetrically mensurate the imagery and prepare intelligence interpretation reports.
Instruction: Monitored home study including readings, exercises, and proctored

examinations. Topics include a review of basic military intelligence fundamentals, fundamentals and uses of maps and charts, coordinate systems, multisensor aerial reconnaissance techniques, imagery interpretation fundamentals, equipment, and facilities, photogrammetry, plotting, titling, forwarding and reporting aerial imagery, tactical and strategic imagery interpretation including stereograms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in photographic interpretation or photogrammetry (5/88).

AF-1710-0001

Plumbing System Maintenance (LGM-25)
(Plumber/Plumbing Supervisor (SM-68B))

Course Number: AZR55255Y; ATC56450-2; ATS56450-2.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 4-6 weeks (108-150 hours).

Exhibit Dates: 3/62-12/68.

Objectives: To train airmen to perform as plumbing specialists and supervisors in SM-68B missile facilities.

Instruction: Lectures and practical exercises in plumbing operations in SM-68B missile facilities, including weapon system familiarization, maintenance management, corrosion control; configuration operation, and maintenance of water supply equipment and water storage, domestic water, industrial water, and fire water systems; configuration and maintenance of the contaminated waste, sanitary waste, and drainage systems; water requirements and testing; and water pumping operations.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in environmental or nuclear plant technology (5/74).

AF-1710-0002

Plumbing Specialist
(Plumber)

Course Number: 3ABR55235; ABR55235; ABR56430Z; ABR56430; AB56430.

Location: School of Applied Aerospace Sciences, Sheppard AFB, TX; 3750th Technical School, Warren AFB, WY; 3450th Technical School, Warren AFB, WY.

Length: 9-15 weeks (270-360 hours).

Exhibit Dates: 8/55-12/73.

Objectives: To train basic airmen to perform as apprentice plumbers.

Instruction: Lectures and practical exercises in the maintenance, installation, and repair of plumbing systems and equipment, including operation principles and configuration; construction maintenance and repair of main and building water supplies; vent and waste systems; various fixtures, faucets, and valves; use and maintenance of tools and supplies; and piping connections to hot water and steam heating equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in plumbing or water sanitation technology (5/74).

AF-1710-0007

Pavements Maintenance Specialist

Course Number: 3AZR55150; AZR55150.

Location: School of Applied Aerospace Sciences, Sheppard AFB, TX; 3750th Technical School, Sheppard AFB, TX.

Length: 3 weeks (9-120 hours).

Exhibit Dates: 7/67-12/73.

Objectives: To train personnel to perform as pavement maintenance specialists.

Instruction: Lectures and practical exercises in the duties of pavement maintenance specialists, including publications, soil mechanics, base course construction, drainage, concrete mixtures, bituminous mixtures, herbicides, rigid and flexible pavement construction and maintenance, and preparation of subgrade for rigid and flexible pavements.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in construction of pavements (5/74).

AF-1710-0021

Plumbing Specialist by
Correspondence

Course Number: 55255.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 11/85-Present.

Objectives: This course is intended to train individuals to be plumbing specialists in installation and maintenance of waste systems and water supply systems.

Instruction: This correspondence course of instruction consists of on-the-job supervision and at-home studies. The home study provides basic knowledge of waste systems installation and maintenance and water supply systems installation and maintenance. Also covered are basic plan reading, job safety, tool and equipment usage and project planning. Fire prevention and military contingency training are also covered.

Credit Recommendation: In the vocational certificate category, 3 semester hours in plumbing trades (9/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in mechanical systems for buildings (9/86).

AF-1710-0023

Plumbing Technician by
Correspondence

Course Number: 55275.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 6/85-Present.

Objectives: To train personnel to perform as plumbing technicians.

Instruction: This course of instruction consists of on-the-job training and at-home studies. The home study provides training to become a plumbing supervisor and the on-the-job training provides reinforcement for the home studies. The course contains plumbing supervision, construction and operation of waste and water systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in advanced plumbing (9/86); in the lower-division baccalaureate/associate degree category, 2 in mechanical and electrical equipment in buildings (plumbing) (9/86).

AF-1710-0024

Carpentry Specialist by
Correspondence

Course Number: 55250.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: *Version 1:* 10/88-Present. *Version 2:* 4/86-9/88.

Objectives: To train personnel in light building frame construction.

Instruction: This course consists of on-the-job training and at-home studies. The home study provides training in the methods of light frame construction including foundation, floor, wall and roof framing, and prefabricatd and heavy timber construction.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 3 semester hours in advanced carpentry (9/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in light building frame construction (9/86).

AF-1710-0025

Apprentice Carpenter by
Correspondence

Course Number: 55230.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: *Version 1:* 7/88-Present. *Version 2:* 7/84-6/88.

Objectives: To train personnel to perform as apprentice carpenters.

Instruction: Consists of on-the-job training and at-home studies. The home study provides training in the principles of carpentry and the on-the-job training provides the application. The course contains building layout, concrete form construction, floor construction, wall framing, roof frames and converings, exterior and interior finish, prefabricated buildings, and heavy timber construction.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 3 semester hours in carpentry (9/86).

AF-1710-0026

Masonry Specialist by
Correspondence

Course Number: 55253.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 7/85-6/89.

Objectives: To train personnel to perform as masons.

Instruction: This course of instruction consists of on-the-job training and at-home studies. The home study provides the background principles to perform masonry construction such as bricklaying, concrete block, structural tile construction, plastering, ceramic surface tile, and stone construction. The on-the-job training provides the practical applications of these principles.

Credit Recommendation: In the vocational certificate category, 3 semester hours in advanced masonry construction (9/96).

AF-1710-0027

Apprentice Plumber by
Correspondence

Course Number: 55235.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 10/85-Present.

Objectives: To train personnel to perform as apprentice plumbers.

Instruction: This course of instruction consists of on-the-job training and at-home studies. The home study provides training to perform as a plumber and the on-the-job training provides reinforcement for the home studies. The course contains water supply systems, building distribution systems, interior and exterior plumbing systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in plumbing (9/86).

AF-1710-0028

CONSTRUCTION EQUIPMENT OPERATOR BY CORRESPONDENCE

Course Number: 55151.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/86–Present.

Objectives: To train individuals in the operation and maintenance of construction equipment with the primary emphasis being placed on earth moving and compaction equipment.

Instruction: Consists of on-the-job supervision and and at-home study. The at-home study provides knowledge regarding the operation and maintenance of construction equipment and primary emphasis placed upon earth moving and compaction. Topics covered include operating wheeled earth loading equipment, operating crawler tractors, motorized graders, excavation equipment, and soil and surface preparation. Maintenance of equipment is covered as well as snow removal, ice control, crane operation and rigging. The individual will also study basic welding principles and the use of explosives for clearing and quarrying operations.

Credit Recommendation: In the vocational certificate category, 6 semester hours in advanced construction equipment operation and maintenance (9/86).

AF-1710-0029

APPRENTICE CONSTRUCTION EQUIPMENT OPERATOR

Course Number: 55131.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/85–Present.

Objectives: To train individuals in the basic operation and maintenance of construction equipment.

Instruction: Consists of on-the-job training and at-home study. The at-home study provides knowledge regarding the operation and maintenance of basic construction equipment. Topics covered include the operation of wheeled loading equipment, hauling equipment, motorized graders, and bulldozers. Operation and maintenance of auxiliary construction equipment such as pavement sweepers and snow plows are also discussed. Accident prevention, job safety and first aid techniques are also covered.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic construction equipment operation and maintenance (9/86).

AF-1710-0030

APPRENTICE MASON BY CORRESPONDENCE

Course Number: 55231.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum of 52 weeks.

Exhibit Dates: 11/83–Present.

Objectives: To train personnel to perform as mason's helper.

Instruction: This correspondence course of instruction consists of on-the-job training and at-home studies. The home study provides the background principles for the apprentice to perform masonry construction such as concrete block, structural tile, surface tile, plaster and stucco. The on-the-job training provides the apprentice with the practical applications of these principles.

Credit Recommendation: In the vocational certificate category, 3 semester hours in masonry construction (9/86).

AF-1710-0031

MISSILE MAINTENANCE SPECIALIST (WS-133) BY CORRESPONDENCE

Course Number: 4430G.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance and supervise subordinates in basic Minuteman assembly, repair, maintenance, modification confuguration, inspection and servicing of missile subsystem and related support equipment.

Instruction: This is a supervised self-paced extension course covering topics of missile maintenance, technical orders, maintenance data collection systems, security and safety, corrosion, hand tools, aerospace hardware, principles of basic electricity, pneudraulics, layout of Minuteman facilities, operation and maintenance of equipment and special-purpose vehicles, equipment operations, and proofload testing equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in heavy equipment operation (10/88).

AF-1710-0032

SPECIAL PURPOSE VEHICLE AND EQUIPMENT MECHANIC BY CORRESPONDENCE

Course Number: 47250.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/82–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform duties in the area of special purpose vehicles and equipment and mechanics to include: maintenance management (vehicles), diesel and gasoline engines theory, power trains, hydraulics systems, alignment, wheel balancing, heating and air conditioning, vehicle equipment, forklifts and loaders and towing and servicing.

Instruction: Covers publications, maintenance management and procedures, tools and equipment management, internal combustion engine, cooling and lubricating systems, engine fuel system, air, exhaust and emission control, automotive electrical system, electronic ignition, power trains, hydraulic system, chassis unit, front end alignment and wheel balancing, heating and air conditioning, heavy earth moving equipment, sweepers, snow-removal equipment and miscellaneous equipment, fork lifts, aircraft cargo loaders, heaters, spray deicers and towing tractors.

Credit Recommendation: In the vocational certificate category, 3 semester hours in heavy equipment maintenance, 3 in heavy equipment operation (10/88).

AF-1710-0033

SPECIAL VEHICLE MECHANIC (FIRETRUCKS) BY CORRESPONDENCE

Course Number: 47251A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86–Present.

Learning Outcomes: Upon completion of the course,the student will be able to perform duties in the area of special purpose vehicle (firetruck) mechanics to include: vehicle maintenance management, theory of operation on diesel and gasoline engines and their systems powertrains, hydraulic system, chassis unit, front end alignment and wheel balancing, heating and air conditioning, and firetruck systems.

Instruction: This is a supervised self-paced extension course covering publications, maintenance forms and records, vehicle management; procedures, tools and equipment management; internal combustion engines; cooling and lubrication systems; air, exhaust and emission control systems; automotive electrical system; electronic ignition; power train; hydraulic systems; chassis unit; front end alignment and wheel balancing; heating and air conditioning, and the following fire truck systems: drive trains, dipensing systems, and winterization systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in heavy equipment mechanics (10/88); in the lower-division baccalaureate/associate degree category, 1 semester hour in fire science (10/88).

AF-1710-0034

SPECIAL VEHICLE MECHANIC (REFUELING VEHICLES) BY CORRESPONDENCE

Course Number: 47251B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform duties as a special purpose vehicle (refueling vehicle) mechanic to include: maintenance management, theory of operation on diesel and gasoline engines and their systems, power trains, hydraulic system, chassis unit, front end alignment and wheel balancing, heating and air conditioning and refueling vehicles.

Instruction: This is a supervised self-paced extension course including publication forms and records; vehicle management and procedures; tools and equipment management; internal combustion engines, cooling and lubricating systems; air, exhaust and emission control systems; electronic ignition, power trains; automotive electrical system; chassis unit; front end alignment and wheel balancing; heating and air conditioning; refueling vehicle; power take-off and throttle interlock system; dispensing system; hoses and reels; meters and static ground reels; bottom loading system; and winterization system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in heavy equipment mechanic (10/88).

AF-1710-0035

VEHICLE BODY MECHANIC BY CORRESPONDENCE

Course Number: 47253.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86–Present.

Learning Outcomes: Upon completion of the course,the student will be able to perform as a vehicle mechanic and work with technical orders and supply publications, policies and material deficiency reports, vehicle operation, safety, and the allied trades

Instruction: Instruction covers maintenance policies, publications, vehicle maintenance management, maintenance procedures, documents and reports, equipment management and use, automotive body repair, vehicle frame and hardware, sewing machine and upholstry, automotive gas, arc welding, gas-shielded and oxyacetylene, heat exchanger, and fixed tanks.

Credit Recommendation: In the vocational certificate category, 3 semester hours in automotive body mechanics (10/88).

AF-1710-0036

Vehicle Maintenance Control and Analysis Specialist by Correspondence

Course Number: 47254.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86-Present.

Learning Outcomes: Upon completion of the course,the student will be able to qualify as a vehicle maintenance manager and to perform maintenance data collection analysis.

Instruction: Instruction covers publications, maintenance management, maintenance procedures, documents and reports, tool and equipment management, data processing, data collection system, data inquiry system, standard analysis, visual media and written presentations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in maintenance control (10/88).

AF-1712-0005

1. Electrical Power Production Specialist
2. Electrical Power Production Specialist
3. Electrical Power Production Specialist
   (Electrical Power Production Operator)
4. Electrical Power Production Operator

Course Number: *Version 1:* 3ABR54330. *Version 2:* 3ABR54330; ABR54330. *Version 3:* ABR54330; ABR65730; ABR56730B. *Version 4:* AB56730.

Location: *Version 1:* 3750th Technical School, Sheppard AFB, TX. *Version 2:* 3750th Technical School, Sheppard AFB, TX. *Version 3:* 3750th Technical School, Sheppard AFB, TX. *Version 4:* 3450th Technical School, Warren AFB, WY.

Length: *Version 1:* 14-17 weeks (504-620 hours). *Version 2:* 18 weeks (510 hours). *Version 3:* 15-19 weeks (420-540 hours). *Version 4:* 8 weeks (240 hours).

Exhibit Dates: *Version 1:* 3/72-12/73. *Version 2:* 9/65-2/72. *Version 3:* 9/58-8/65. *Version 4:* 5/57-8/58.

Objectives: To train enlisted personnel in the operation, maintenance, and repair of engine-driven electrical generation systems.

Instruction: *All Versions:* Lectures and practical exercises in the operation, maintenance, and repair of engine-driven generation systems, including engines and systems, operation, troubleshooting, and maintenance. *Version 1:* Topics include publications and engine fundamentals; engine systems and associated equipment; fundamental engine repair; power generation and circuit characteristics; generation equipment, controls, and wiring diagrams; operation and maintenance of mobile generator sets; generator set operation and maintenance; and generator set operation and aircraft arresting barriers. *Version 2:* Topics include publications and engine fundamentals; engine systems and associated equipment; fundamental engine repair; power generation and circuit characteristics; generation equipment, controls, and wiring diagrams; operation and maintenance of mobile generator sets; generator set operation and maintenance; and generator set operation and aircraft arresting barriers. *Version 3:* Topics include power production fundamentals; generation equipment and circuits; engine systems components; fundamental engine repair; engine overhaul and performance tests; preventive maintenance and generator set operation; specific generator sets operation and troubleshooting; principles of diesel engines and systems; electrical fundamentals; generation and warning systems; single-unit operation; synchronizing, paralleling, and troubleshooting multiple power units; and operating, inspecting, and troubleshooting specific power units. *Version 4:* Topics include operation and maintenance of diesel engines; electrical fundamentals and single-unit operation including operator maintenance; parallel operation and troubleshooting; single and parallel operation including troubleshooting of a specific diesel generator power plant; and operation and maintenance of a specific model.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electrical power systems maintenance on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electrical power system maintenance (6/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electrical power system maintenance on the basis of institutional evaluation (6/74). *Version 4:* In the upper-division baccalaureate category, 2 semester hours in electrical power system maintenance on the basis of institutional evaluation (6/74).

AF-1714-0003

Aircraft Electrical Systems Specialist by Correspondence

Course Number: 42350.

Location: Extension Course Institute, Gunter AFB, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/83-Present.

Objectives: To teach enlisted personnel maintenance management and documentation and also the basic electrical theory necessary to maintain and repair aircraft electrical systems.

Instruction: This is a self study course presenting materials pertaining to maintenance management and documentation, test equipment and basic AC and DC electrical theory, and the aircraft control and warning system. Aircraft electrical systems that are discussed include landing gear and related systems, flight control systems, starter systems, fuel systems, aircraft warning systems, lighting systems, and nesa glass systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electrical theory (3/85). Course concludes with a proctored examination.

AF-1714-0004

Weapons Fuzing Systems Specialist (Electrical)

Course Number: AB33130-B; AB33130-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 19 weeks (510-540 hours).

Exhibit Dates: 12/55-12/68.

Objectives: To train enlisted personnel to maintain and repair nuclear weapons fusing systems, components, and test equipment.

Instruction: Lectures and practical exercises in electronics fundamentals, including DC motors, generators, and meters; AC generation; inductive and capacitive reactance; series-parallel circuits; synchro systems; diode and triode tubes; rectifiers and filters; and transients in R-C networks.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in basic electricity, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1714-0005

Guidance Systems Analyst (TM-76A)

Course Number: ABR31430G-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 25 weeks (660 hours).

Exhibit Dates: 12/59-12/68.

Objectives: To train enlisted personnel to maintain and repair TM-76A guidance systems.

Instruction: Lectures and practical exercises in basic electricity; electronics; flight controls, command guidance, and basic missile checkers; check-out and alignment; and guidance systems test set theory.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1714-0015

Outside Wire and Antenna Maintenance Repairman
(Outside Wire and Antenna Systems Installation and Maintenance Specialist)
(Cable and Antenna Installation Specialist)

Course Number: 3ABR36130; ABR36130; AB36130.

Location: School of Applied Aerospace Sciences, Sheppard AFB, TX; 3750th Technical School, Warren AFB, WY.

Length: 13-18 weeks (360-564 hours).

Exhibit Dates: 3/55-12/73.

Objectives: To train enlisted personnel to maintain and repair outside wire and antenna systems.

Instruction: Lectures and practical exercises in outside-plant construction fundamentals; interpretation of technical orders; aerial cable support construction; buried and underground cable characteristics and installation; antenna support and tower assembly and erection; and construction and installation of doubler-type, rhombic, and discone antennas.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in civil technology (communications), wireman, power system lineman, or antenna systems specialist (5/74).

AF-1714-0023

Apprentice Electrician by Correspondence

Course Number: 54230.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/81-Present.

Objectives: To provide knowledge of electrical fundamentals to enable the apprentice electrician to advance skills.

Instruction: Course includes installation and maintenance of interior electrical power distribution systems for lighting and motor controls. Electrical codes, troubleshooting, estimating , and distribution are also presented. Three-phase power systems, motor controls, and emergency power systems are covered. The course concludes with a proctored examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic electric fundamentals or in electrical wiring (3/85).

AF-1714-0024

Electrical Power Production Technician by Correspondence

Course Number: 54370.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/85–Present.

Objectives: To train personnel in electrical power production operation and maintenance.

Instruction: Consists of on-the-job training and at-home studies in the operation and maintenance of electrical power production. The course includes engine maintenance, engine systems, power generation and control, electrical devices and power plant switch gear, power plant equipment, and gas turbines.

Credit Recommendation: In the vocational certificate category, 3 semester hours in advanced electrical power plant operation and maintenance (9/86).

AF-1714-0025

Electrical Power Line Distribution Technician by Correspondence

Course Number: 54271.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/85–1/89.

Objectives: To train individuals to install, inspect, repair, and maintain electric power systems and components. Individuals are also trained to advise on technical problems and to supervise work crews.

Instruction: Consists of on-the-job supervision and at-home study. The home study provides basic knowledge regarding electrical principles and meters, substation layout and components, overhead and underground distribution systems and components, repair and maintenance of systems. Lighting systems installation and maintenance is covered as well as troubleshooting of all electrical power distribution systems. Resource management, supervision, safety and first aid are also covered.

Credit Recommendation: In the vocational certificate category, 4 semester hours in electric fundamentals and 4 in power systems maintenance (9/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in electric fundamentals (AC/DC circuits) and 3 in power distribution systems (9/86).

AF-1714-0026

Electrical Power Line Specialist by Correspondence

Course Number: 54251.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 7/88–Present. *Version 2:* 5/85–6/88.

Objectives: To train individuals to construct, modify, repair, and service electric power distribution systems. Both overhead and underground systems are covered.

Instruction: Consists of on-the-job supervision and at-home study. The home study provides basic knowledge regarding construction, repair, modification, and maintenance of overhead and underground electric power distribution systems. Topics covered include electrical principles and meters, overhead and underground distribution systems and components, substations, inspection, and maintenance. Area lighting systems, tools, equipment, trucks, and safety and first aid are also discussed.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 4 semester hours in electric fundamentals and 4 in electric distribution systems maintenance (9/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in electrical fundamentals (AC/DC circuits) (9/86).

AF-1714-0027

Electrical Power Production Specialist by Correspondence

Course Number: 54350.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/85–6/89.

Objectives: To train personnel in electrical power production operation and maintenance.

Instruction: Consists of on-the-job training and at-home studies in the operation and maintenance of electrical power production. The home study provides training in the principles and the on-the-job training provides the application. The course includes electrical fundamentals, electronic principles, switch gear components, engine maintenance, engine systems, and power plant equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in diesel engine systems maintenance, 3 in electrical power plant maintenance, 3 in electric power producing engine maintenance, 3 in fundamentals of electricity (AC-DC circuits), 3 in electronics (9/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronics (9/86).

AF-1714-0028

Electrician by Correspondence

Course Number: 54250.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/83–Present.

Objectives: Upon completion of the course, the student will be trained in the installation of electrical systems and the installation and maintenance of motors, controls, and special equipment.

Instruction: This course of instruction consists of on-the-job training and at-home studies in the installation and maintenance of various types of electrical systems, motors, controls, and special equipment. The course includes basic electricity and the installation and maintenance of motors, controls, and special equipment.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electrical systems, 3 in electric motors and equipment (9/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in electrical and mechanical equipment in buildings (electrical) (9/86).

AF-1714-0029

Fundamentals of Electricity by Correspondence

Course Number: 3030.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/64–Present.

Learning Outcomes: Upon completion of the course,the student will be able to accomplish basic algebraic and trigonometric functions, construct graphs and understand basic elements of electricity, direct current circuits as well as magnetism and electromagentism. Student will be able to describe the principles of direct current generators and motors as well as operation of meters, theory of capacitors, physical factors affecting inductance and transient phenomena in electronics. Students will have a mastery of alternating current and circuits and will be able to perform graphics analysis of AC circuits.

Instruction: This is a self-paced extention course designed to cover three major areas: 1) review of algebra and coverage of graphs and simultaneous linear equations, elements of electricity: DC circuits, and magnetism; 2) direct current: generators, motors, meters, inductors, transients and 3) alternating current: elementary trigonometry, AC circuit principles, analysis of AC circuits.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to electricity (10/88); in the upper-division baccalaureate category, 1 semester hour in advanced electricity (AC), 1 in advanced electricity (DC) (10/88).

AF-1714-0030

Electrical Power Production Specialist by Correspondence

Course Number: 54252A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/88–Present

Learning Outcomes: Upon completion of the course, the student will be able to maintain electrical generators, electronic-controlled equipment, and switchgear components and associates circuits.

Instruction: Magnetism, fundamentals of AC/DC circuits and generators, exciters and alternators; types and characteristics of solid-state devices; power supplies; logic functions; truth tables; Boolean equations; logic application and gates; principles of voltage regulators, battery chargers, governors, recitifiers, and brushless exciters; switchgear components.

Credit Recommendation: In the vocational certificate category, 3 semester hours in fundamentals of electricity (AC/DC circuits); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronics (12/89).

AF-1714-0031

Electrical Power Production Technician by Correspondence

Course Number: 54272B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain gasoline and diesel engines as well as power production auxiliary equipment and aircraft arresting systems.

Instruction: Maintenance of gasoline and diesel engines to include: two-stroke and four-stroke-cycle engine operation and fuel and lubricating systems maintenance, cooling systems; governing systems; induction and exhaust systems; internal engine analysis; engine protective devices also maintenance of power production auxiliary equipment and aircraft arresting systems.

Credit Recommendation: In the vocational certificate category, 2 semester hours in diesel engine systems maintenance, 2 in electrical power plant maintenance and 2 in electrical power production engine maintenance (12/89).

AF-1714-0032

RELAYS, GENERATORS, MOTORS AND ELECTROMECHANICAL DEVICES BY CORRESPONDENCE

Course Number: 3035.

Location: Extension Course Institute Gunter, Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/88–Present.

Learning Outcomes: Upon completion of the course, the student will understand the principles of electromagnetism and relays. Protection, time-delay, and voltage AC and DC motors and generators, and will understand the basic principles of Synchro devices, control transformers, and servomechanisms.

Instruction: Through correspondence the student will receive information on electromagnetism and relays, protection, time-delay and voltage control circuits, AC and DC motors and generators, synchro devices, control transformers, and servomechanisms.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (12/89).

AF-1714-0033

SOLDERING AND ELECTRICAL CONNECTORS BY CORRESPONDENCE

Course Number: 3036.

Location: Extension Course Institute, Gunter, Air Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to correctly prepare and solder electrical wiring and components to terminal ends and circuit boards, and will be able to correctly install wire terminals and connector pins using the crimp process. Student will know the safety aspects and correct tools and materials necessary to form aerospace quality solder connections.

Instruction: Through correspondence the student will receive information on soldering safety and tools, types of wires and terminals, correct procedures for soldering, P.C. board preperation for soldered leads and terminals, and pin installiation in electrical connectors.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (12/89).

AF-1715-0001

1. BIOMEDICAL EQUIPMENT MAINTENANCE SPECIALIST (Medical Equipment Repairman)
2. MEDICAL EQUIPMENT REPAIRMAN
3. MEDICAL EQUIPMENT REPAIRMAN (Apprentice Medical Equipment Repairman)

Course Number: *Version 1:* 3ABR40330-2. *Version 2:* 3ABR40330-2. *Version 3:* ABR40330; AB40132.

Location: *Version 1:* School of Health Care Sciences, Sheppard AFB, TX; *Version 1:* Sheppard Technical Training Center, Sheppard AFB, TX. *Version 2:* Sheppard Technical Training School, Sheppard AFB, TX. *Version 3:* Medical Service School, Gunter AFB, AL; *Version 3:* School of Aviation Medicine, Gunter AFB, AL.

Length: *Version 1:* 36 weeks (1261–1284 hours). *Version 2:* 46 weeks (1360 hours). *Version 3:* 15–20 weeks (570–781 hours).

Exhibit Dates: *Version 1:* 6/71–12/73. *Version 2:* 9/69–5/71. *Version 3:* 6/57–8/69.

Objectives: To provide basic career training for biomedical maintenance personnel.

Instruction: Lectures on the principles of medical equipment systems; equipment inspection, installation, calibration, modification, troubleshooting, and repair; and administrative and managerial functions of medical maintenance and shop operation.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 30 semester hours in biomedical equipment technology, 3 in electronics (2/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity (12/68). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electricity (12/68).

AF-1715-0002

FLIGHT FACILITIES EQUIPMENT BASIC O/I MAINTENANCE

Course Number: 2ASR30451-13.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 14 weeks (420 hours).

Exhibit Dates: 2/71–12/73.

Objectives: To train enlisted personnel in basic organizational and intermediate maintenance of flight facilities equipment.

Instruction: Lectures and practical exercises in electronic principles, special circuits, ground C-E maintenance management, technical publications, safety, and use of regular and specialized test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in flight facilities equipment basic O/I maintenance (3/74).

AF-1715-0003

AIR TRAFFIC CONTROL RADAR REPAIRMAN BY CORRESPONDENCE

Course Number: 30351.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/83–Present.

Objectives: To provide expertise in the maintenance procedures for air traffic radars.

Instruction: This course covers Air Force procedures for training, general maintenance procedures, soldering techniques, fundamentals and operation of various electronic test equipment, description and limits of various air traffic control radars, fundamentals of waveguides, antennas and scanning systems, moving radar target detection, remote data transmission, principles of precision approach radars and aircraft transponder systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic troubleshooting (11/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of radar (11/86).

AF-1715-0004

F-111 FLIGHT CONTROL TEST STATION TECHNICIAN

Course Number: 3ALR32570-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 9 weeks (270 hours).

Exhibit Dates: 7/69–12/73.

Objectives: To train enlisted personnel to perform intermediate maintenance on the F-111 flight controls test station.

Instruction: Lectures and practical exercises in computer mathematics, data and signal flow analysis, computer equipment and keyboard operation, components circuit analysis, and test station operation.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in computerized testing equipment (3/74).

AF-1715-0005

AIRCRAFT CONTROL AND WARNING RADAR SPECIALIST BY CORRESPONDENCE

Course Number: 30352.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/83–Present.

Objectives: Provide a basic knowledge of digital electronics as well as a basic overview of high power search radars.

Instruction: This correspondence course covers Air Force training procedures, digital techniques, various numbering systems, digital logic and Boolean algebra, clock and pulse generators, sequential logic, combination logic and converters, peripherals and storage devices, semiconductors, corrosion control, description of high power radar systems, radar receivers nd calibration devices, support equipment such as generators, aircraft transponders, and portable search radars.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of digital techniques, and 3 in radar fundamentals (11/86).

AF-1715-0006

BOMB NAVIGATION SYSTEMS MECHANIC (FB-111)

Course Number: 3ALR32130R.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 24 weeks (720 hours).

Exhibit Dates: 9/69–12/73.

Objectives: To train enlisted personnel to repair bomb navigation systems.

Instruction: Lectures and practical exercises in attack radar system theory, operation, and maintenance; optical display sight system operation and maintenance; digital computer complex, control and display set, and integrated system tie-ins operation; and bomb navigation system maintenance, operational checks, and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, 2 in electronics laboratory, and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0007

Automatic Tracking Radar Specialist by Correspondence

Course Number: 30353.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/84–Present.
Objectives: To enable the electronic technician to troubleshoot automatic tracking radar systems.
Instruction: This course covers Air Force training procedures, basic electronic maintenance techniques, soldering and cabling, basic electronic test equipment, fundamentals of transistor, and vacuum tube amplifiers, synchro devices, operational amplifiers, fundamentals of tracking radars, analog computation and use in tracking radars, radar receivers and radar control systems.
Credit Recommendation: In the vocational certificate category, 3 semester hours in electronic maintenance procedures, and 2 in radar fundamentals (11/86).

AF-1715-0009

Air Traffic Control Radar Technician by Correspondence

Course Number: 30371.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/85–Present.
Objectives: Upon completion of the course, the student will possess basic electronic expertise necessary to perform maintenance on various air traffic control radars.
Instruction: The course covers material management, maintenance organization, electronic fundamentals, DC and AC circuits, basics of electron tubes and semiconductors, transistor and associated circuits such as amplifiers, oscillators, multivibrators, power supplies, numbering systems, digital logic, storage devices, timing, sequential logic, combination logic and converters.
Credit Recommendation: In the vocational certificate category, 3 semester hours in maintenance techniques (11/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in basic electronics and 3 in digital technqiues (11/86).

AF-1715-0010

Aircraft Control and Warning Radar Technician by Correspondence

Course Number: 30372.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/85–3/88.
Learning Outcomes: Upon completion of the course, the student will possess fundamental knowledge of aircraft detection and control radar systems.
Instruction: Course materials include maintenance management, material control, limited discussion of radar power supplies, transmitters, receivers, servo systems, displays, transponders, microwave antenna systems and radar site selection.
Credit Recommendation: In the vocational certificate category, 2 semester hours in fundamentals of radar (11/86).

AF-1715-0011

Automatic Tracking Radar Technician by Correspondence

Course Number: 30373.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/84–Present.
Objectives: To enhance the radar technician's understanding of the principles of tracking radars and overall maintenance management.
Instruction: Course provides instruction maintenance organization and record keeping, basic television scan techniques, basic principles of radar target acquisition and tracking, and discussion of analog computation.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0012

Navigational Aids Equipment Specialist by Correspondence

Course Number: 30451.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/82–Present.
Objectives: To produce an individual who is knowledgeable in the general principles of air navigational ground equipment.
Instruction: Course provide a very limited discussion of electronic principles, a fundamental discussion of aircraft landing systems (localizer and glide slope), very high frequency and low frequency marker and beacon transmitters, excellent discussion of the principles of the omnirange, tactical air navigation (TACAN) systems as well as digitaal monitoring equipment.
Credit Recommendation: In the vocational certificate category, 3 semester hours in air navigational systems (11/86).

AF-1715-0013

Television Equipment Repairman by Correspondence

Course Number: 30455.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/81–Present.
Learning Outcomes: Upon completion of the course, enlisted personnel will be able to repair and maintain television equipment.
Instruction: This is correspondence study with on-the-job supervision and proctored testing for training television equipment repairmen. The student is introduced to topics from electric circuits, magnetism, semiconductor and transistor circuits. Also coverage is given of numbering systems, Boolean algebra, digital circuits, conversion circuits and storage devices. The television portion covers television test equipment, television system theory, repair and maintenance.
Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics, 2 in digital circuits, and 6 in television equipment specialist (11/86).

AF-1715-0014

Space Communications Systems Equipment by Correspondence

Course Number: 30456.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 5/83–Present.
Objectives: Upon completion of the course, the student will be trained as space communication systems equipment operator/specialist.
Instruction: Course is offered as correspondence study with on-the-job supervision and proctored testing to train enlisted personnel as space communication systems equipment operator/specialist. The student is introduced to waveform measurement using an oscilloscope, electronic circuits, digital systems, semiconductor devices and sequential logic. Also, satellite programs multiplexing techniques, digital communication, and installation and maintenance
Credit Recommendation: techniques for satellite systems are covered. In the vocational certificate category, 3 semester hours in electronics (11/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in digital circuits (11/86); in the upper-division baccalaureate category, 3 semester hours in digital communication (11/86).

AF-1715-0015

Wideband Communications Equipment Technician by Correspondence

Course Number: 30470.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 2/83–Present.
Objectives: Upon completion of the course, enlisted personnel will be trained as wideband communication equipment technicians.
Instruction: This is correspondence study with on-the-job supervision and proctored testing to train enlisted personnel as wideband communication equipment technicians. Topics such as system performance monitoring, wideband system siting, topographic maps, microwave propagation, waveguides and antennas are covered.
Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in communication theory (11/86).
Related Occupation Codes: 86/11.

AF-1715-0016

Electronic Computer Repairman (AN/FSA-21/412L)
(Electronic Digital Computer Repairman (AN/FSA-21/412L))

Course Number: ABR30533-3.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 14 weeks (420 hours).
Exhibit Dates: 3/65–12/68.
Objectives: To train enlisted personnel who have experience in basic electronics to maintain and repair digital computers.
Instruction: Practical experience in digital computer principles, troubleshooting techniques, test equipment, and hand skills.
Credit Recommendation: In the upper-division baccalaureate category, [illegible] semester hours in electricity and electronics, and credit in electronics laboratory on the basis of institutional evaluation (3/74).

AF-1715-0017

Navigational Aids Equipment Technician by Correspondence

Course Number: 30471.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 11/84–Present.

Objectives: The technician is instructed in fundamentals of electronics, digital operations and installation of instrument landing systems.

Instruction: The course presents a general discussion of maintenance management, technical publications, test equipment, use of the oscilloscope and basics of DC and AC circuits. Higher level discussion of numbering systems, digital logic and Boolean algebra, clock and pulse generators, sequential logic, combination logic and converters, computer peripherals and storage devices, as well as installation of instrument landing systems.

Credit Recommendation: In the vocational certificate category, 1 semester hour in fundamentals of electronic circuits (11/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of digital techniques (11/86).

AF-1715-0018

Electronic Digital Data Processing Repairman (AN/FST-2B)
(Electronic Digital Data Processing Equipment Repairman (Data Transmission))
(Electronic Digital Data Processing Equipment Repairman)

Course Number: ABR30531-4; ABR30531D; ABR30531

Location: 3380th Technical School, Keesler AFB, MS.

Length: 42-45 weeks (1170-1260 hours).

Exhibit Dates: 9/59-10/70.

Objectives: To train enlisted personnel to service and repair electronic computer systems and coordinate-data-transmitting equipment.

Instruction: Practical experience in maintenance and operation of data transmitting equipment, multiplexers, random access plan position indicators, electronic and data processing principles, digital computer techniques, and shop practices. Includes basic circuit analysis, testing and logic.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity and electronics, and additional credit in electronics laboratory on the basis of institutional evaluation (3/74).

AF-1715-0019

1. Flight Facilities Equipment Technician
2. Flight Facilities Equipment Maintenance Technician

Course Number: AAR30471.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 38 weeks (1140 hours). *Version 2:* 32 weeks (960 hours).

Exhibit Dates: *Version 1:* 12/63-12/68. *Version 2:* 12/58-11/63.

Objectives: To train selected airmen in the operation, maintenance, and installation of flight facilities and associated equipment.

Instruction: Lectures and practical experience in advanced electronic principles of circuit analysis; troubleshooting techniques; maintenance, installation, testing, and alignment of flight facilities; flight and ground checking procedures; shop management; systems and files; supply procedures and catalogs; and personnel management.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68), 3 in communications engineering (3/74), and credit in communications engineering on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1715-0020

Aircraft Control and Warning Radar Repairman, AN/FPS-8, AN/FPS-4
(Aircraft Control and Warning Radar Repairman, AN/FPS-8, AN/FPS-4, and IFF)

Course Number: AB30332E.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 28-35 weeks (870-960 hours).

Exhibit Dates: 3/55-12/68.

Objectives: To train enlisted personnel to operate, align, tune, inspect, and repair aircraft control and warning radar equipment.

Instruction: Lectures and laboratories in AC and DC circuits, resistors, inductors, capacitors, transients, measuring instruments, motors and generators, oscilloscopes, power supplies, diodes and rectifiers, amplifiers, oscillators, special circuits, and radar microwave propagation.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as a technical elective in electrical engineering (3/74).

AF-1715-0021

Space Communications Systems Equipment Operator/Technician by Correspondence

Course Number: 30476.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/83-6/90.

Objectives: To upgrade the space communications systems equipment specialist to the technician level.

Instruction: This correspondence study course covers security of space communications systems, maintenance management, processing and controlling materiel, and a limited review of defense satellite communications systems and satellite access and tracking.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0022

Aircraft Inertial and Radar Navigation Systems Repairman (RF-4C Supplement)

Course Number: 3AZR30154-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 13 weeks (390 hours).

Exhibit Dates: 6/68-12/73.

Objectives: To train enlisted personnel to install, inspect, maintain, and repair aircraft inertial and radar guidance systems.

Instruction: Lectures and practical exercises in aircraft inertial and radar guidance systems installation, inspection, maintenance, and repair, including aircraft guidance equipment operating principles, block-diagram and circuit analysis, electronic wave-shaping circuit analysis, and system maintenance and repair procedures. Emphasis is on electronic test equipment usage and equipment repair.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronic pulse and wave-shaping circuit analysis (3/74).

AF-1715-0023

Aircraft Control and Warning Radar Repairman (AN/CPS-6B and AN/FPS-6)
(Aircraft Control and Warning Radar Repairman (AN/CPS-6B and IFF))

Course Number: AB30332D.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 29-39 weeks (870-1080 hours).

Exhibit Dates: 11/54-12/68.

Objectives: To train enlisted personnel to perform elementary maintenance and repair on aircraft control and early warning radar equipment.

Instruction: Lectures in AC and DC circuits fundamentals; transients; measuring instruments; oscilloscopes; motors and generators; DC power supplies; diodes and rectifiers; resistors, inductors, and capacitors; amplifiers, oscillators, and detectors; superheterodyne receivers; frequency modulation and discriminators; microwave devices and frequency sources; r-f transmission lines; synchros and servomechanisms; and maintenance and repair of radar, PPI, and IFF hardware.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics (3/74).

AF-1715-0024

Electronic Cryptographic Communications Equipment Specialist by Correspondence

Course Number: 30650.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/85-Present.

Objectives: The student will be provided the training required to upgrade enlisted personnel from the apprentice level to the electronic communication equipment specialist.

Instruction: This is offered through correspondence study with the job supervision and proctored testing to train electronic cryptographic communications equipment specialist. The student is introduced to topics from electronics, communication systems, modems, modulation, filters, multiplexers, interface devices, data conversion, data and line conditioning. Also, maintenance practices and test equipment are also covered.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics, 1 in maintenance practices (11/86); in the upper-division baccalaureate category, 2 semester hours in communication theory (11/86).

AF-1715-0025

Airborne Early Warning Radar Repairman (AN/APS-20E)

Course Number: AB30132A.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 29 weeks (870 hours).

Exhibit Dates: 3/55-12/68.

Objectives: To provide enlisted personnel with in-depth training in installation, repair, and maintenance of airborne early warning radar systems.

Instruction: Lectures and practical experience in airborne early warning radar system installation, maintenance, and repair, including AC and DC circuit fundamentals; series resistive and parallel resistive circuits; principles of magnetism; capacitors and capacitive reactance; DC motors, generators, and measuring instruments; diodes, triodes, tetrodes, and pentodes; principles of amplification; video, tuned, and push-pull amplifiers; amplitude modulation and detection; and various troubleshooting techniques and equipment usage. Much of the material contained in this course has been outdated by recent advances in semiconductor devices; its transfer value is in DC and AC circuits, manual skills, and troubleshooting techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics (3/74).

AF-1715-0026

Electronic-Mechanical Communications and Cryptographic Equipment Systems Specialist by Correspondence

Course Number: 30651.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/82–3/88.

Objectives: To train personnel in electronic-mechanical communications and cryptographic equipment systems.

Instruction: This correspondence course with proctored examinations includes topics in electronics, logic circuits, data processing, paper tape devices, card devices, page printers, modems and synchronizers. The mechanical principles of paper tape, card devices and page printers are also covered.

Credit Recommendation: In the vocational certificate category, 3 semester hours in introduction to data processing, and 3 in computer mechanical equipment maintenance (11/86).

AF-1715-0027

1. Avionic Inertial and Radar Navigation Systems Specialist
2. Aircraft Inertial and Radar Navigation Systems Repairman
3. Aircraft Inertial and Radar Navigation Systems Repairman

Course Number: *Version 1:* 3ABR32834. *Version 2:* 3ABR30134. *Version 3:* 3ABR30134; ABR30134.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 35 weeks (1050 hours). *Version 2:* 37–39 weeks (1110–1170 hours). *Version 3:* 40 weeks (1110 hours).

Exhibit Dates: *Version 1:* 3/72–12/73. *Version 2:* 4/70–2/72. *Version 3:* 2/65–3/70.

Objectives: To train airmen to operate, maintain, and repair avionic inertial and radar navigation equipment.

Instruction: *All Versions:* Lectures and practical exercises in the operation, maintenance, and repair of avionic inertial and radar navigation equipment, including digital computer mathematics, logic, and symbology; analog computer circuit analyses; air navigation and general purpose computer principles and characteristics; and Doppler equipment. *Version 1:* Includes general purpose computer applications to airborne guidance equipment and integrated data systems, forward-looking/terrain-following systems, DC and AC, resonance, magnetism, motors, and synchros; diodes, transistors, and electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators; AM, FM, and PM systems; binary and octal numbers; logic functions; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; transmission lines and antennas; transmitters; wave-guides; cavity resonators; UHF and microwave oscillators and amplifiers; and electrical test equipment. *Version 2:* Includes forward-looking/terrain-following systems, DC and AC, resonance, magnetism, motors, and synchros; diodes, transistors, and electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM systems; binary and octal numbers; logic functions; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; transmission lines and antennas; transmitters; wave-guides; cavity resonators; UHF and microwave oscillators and amplifiers; and electrical test equipment. *Version 3:* Includes radar altimeters, gyroscope and accelerometer transducers in inertial guidance systems, inertial navigation systems with avionics tie-in, alignment of inertial navigation systems, synchros and feedback for stable platforms, and calibration and specialized maintenance procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory and 3 in digital electronics (3/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (3/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in analog and digital computer fundamentals (3/74).

AF-1715-0028

Precision Photographic Systems Repairman

Course Number: 3ABR40430.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 19–20 weeks (570 hours).

Exhibit Dates: 5/68–12/73.

Objectives: To train airmen to repair precision photographic systems.

Instruction: Course includes photo principles, contact and projection printer systems, motion picture and finishing equipment, photo intelligence equipment, processing systems and quality control, and still camera systems. Students complete 8 weeks of Maintenance Electronics (3AQR40020) as part of this course.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in precision photoprocessing laboratory (11/77).

AF-1715-0029

Airborne Early Warning Radar Repairman (AN/APS-45)

Course Number: AB30132B.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 27 weeks (810 hours).

Exhibit Dates: 3/55–12/68.

Objectives: To train enlisted personnel to perform elementary maintenance and repair on early warning radar equipment.

Instruction: Lectures and practical exercises in AC and DC circuits, batteries, resistors, inductors, capacitors, measuring instruments, motors and generators, and transformers; oscilloscopes; oscillators and modulators; rectifier power supplies; microwave devices; high-frequency sources and transmission lines; and maintenance and repair of equipment, including height-finder radars, ground-position indicators, and repeater radars.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as a technical elective in electrical engineering (3/74).

AF-1715-0030

Electronic Computer Principles, FYQ-47 Preparatory (Radar Principles)

Course Number: 3AQR30520-3.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3380th Technical School, Keesler AFB, MS.

Length: 20–21 weeks (600–618 hours).

Exhibit Dates: 11/71–12/73.

Objectives: To provide enlisted personnel with an introduction to radar principles as a prerequisite for radar equipment servicing courses.

Instruction: Lectures and practical exercises in basic AC, DC, and RLC circuit principles; solid-state amplifiers, power supplies, and applications in wave generation; electron tube principles and applications; computer logic and components; maintenance management; and computer and radar principles and their application to specific equipment maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in technical subjects (3/74).

AF-1715-0031

Telecommunications System Maintenance Specialist by Correspondence

Course Number: 30653.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/86–Present.

Objectives: To train enlisted personnel in telecommunications system maintenance.

Instruction: This correspondence course with proctored examinations includes topics on test equipment, soldering, hand tools, basic circuit theory, transistors and a little logic theory. Also coverage includes computers, peripherals and storage media. Extensive coverage is given to the mechanical operation of three teletypewriter models.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electronics, and 3 in computer maintenance (11/86).

AF-1715-0032

1. Precision Measuring Equipment Specialist
2. Precision Measuring Equipment Specialist
3. Precision Measuring Equipment Specialist
4. Precision Measuring Equipment Specialist
5. Precision Measuring Equipment Technician
6. Precision Measuring Equipment Technician

Course Number: *Version 1:* 3ABR32430-2. *Version 2:* 3ABR32430. *Version 3:* ALR32430. *Version 4:* ALR32430. *Version 5:* ALR32470. *Version 6:* ALR32470.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 32 weeks (900 hours). *Version 2:* 45–46 weeks (1290 hours). *Version 3:* 35 weeks (1050 hours). *Version 4:* 28 weeks (840 hours). *Version 5:* 18 weeks (540 hours). *Version 6:* 16 weeks (480 hours).

Exhibit Dates: *Version 1:* 5/73–12/73. *Version 2:* 6/68–4/73. *Version 3:* 1/63–5/68. *Version 4:* 1/62–12/62. *Version 5:* 12/59–12/61. *Version 6:* 3/59–11/59.

Objectives: To train enlisted personnel in the installation, check-out, and maintenance of sophisticated electronic systems.

Instruction: *All Versions:* Lectures and practical exercises in trigonometry, complex algebra, electronic fundamentals, electronic circuits, signal generation, low- and high-frequency measurements, microwaves, precision measurements. *Version 5:* Low-level fundamentals, with extensive measurement and calibration practices on electronic and frequency-measuring equipment. *Version 6:* Low-level fundamentals, with extensive measurement and calibration practice on electronic and frequency-measuring equipment.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electrical or electronics laboratory, 3 in microwaves (3/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, 3 in electricity or electronics laboratory, 3 in microwaves, 2 in engineering measurement (3/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, 3 in electricity or electronics laboratory, 3 in microwaves, 2 in engineering measurement (3/74). *Version 4:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics laboratory, 3 in microwaves, 2 in engineering measurement (3/74). *Version 5:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics laboratory, 1 in microwaves, 1 in engineering measurement (3/74). *Version 6:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics laboratory, 1 in engineering measurement (3/74).

AF-1715-0033

PRECISION MEASURING EQUIPMENT SPECIALIST (ELECTRONICS)

Course Number: 3ABR32430-1; ALR32430-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 16–20 weeks (510–600 hours).

Exhibit Dates: 3/64–12/73.

Objectives: To train enlisted personnel to make precision measurements using electrical and electronic instrumentation.

Instruction: Lectures and practical exercises in DC and AC measurements, waveform analysis, and frequency and microwave measurement.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics laboratory, 3 in microwaves (3/74).

AF-1715-0034

TELECOMMUNICATIONS SYSTEMS CONTROL TECHNICIAN BY CORRESPONDENCE

Course Number: 30770.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/77–Present.

Objectives: Technical personnel is upgraded in the field of telecommunications system control and supervision.

Instruction: This correspondence course with proctored examinations includes topic in decibels, noise, voice channel multiplexing, signal compression, modems and data transmission systems. Also, telecommunication systems supervision and quality assurance procedures are covered.

Credit Recommendation: In the vocational certificate category, 3 semester hours in management technology (11/86); in the upper-division baccalaureate category, 2 semester hours in telecommunication theory (11/86).

AF-1715-0035

AIRCRAFT ARMAMENT SYSTEMS SPECIALIST BY CORRESPONDENCE

Course Number: 46250.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/85–Present.

Objectives: To provide upgrade training in aircraft munitions and armament maintenance systems.

Instruction: This correspondence course consists of on-the-job supervision and home study. The home study provide technical knowledge in the field of aircraft armament systems and the on-the-job supervision provides training to reinforce and apply the home studies security and hardware/handtool control, fundamentals of electricity, armament maintenance, loading support equipment, and weapons launch and release systems for attack, interceptor, fighter and bomber aircraft.

Credit Recommendation: In the vocational certificate category, 3 semester hours in fundamentals of electricity, 3 in electronics, and 2 in shop management and property control (9/86).

AF-1715-0036

SPACE SYSTEMS EQUIPMENT MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 30950.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/84–Present.

Objectives: The student will be trained in space systems equipment maintenance.

Instruction: This correspondence course includes topics on test equipment, circuits, solid state devices digital logic circuits, computers, peripherals and storage. Also, coverage is given to transmitters, receivers and antennas.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics (11/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of digital techniques (11/86).

AF-1715-0037

GUIDANCE CONTROL OFFICER (COMPUTER)(SM-68)

Course Number: OTC3044-5.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 7 weeks (210 hours).

Exhibit Dates: 2/61–12/68.

Objectives: To train officers to operate and maintain WS-107A-2 guidance computers.

Instruction: Lectures and practical exercises in number systems, Boolean algebra, programming techniques, and equipment applicable to the WS-107A-2 guidance computer.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in digital computers (3/74).

AF-1715-0038

MISSILE SYSTEMS MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 31650G.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/82–Present.

Objectives: Personnel is trained as missile systems maintenance specialists.

Instruction: This correspondence course provides instruction in missile systems maintenance including maintenance management, maintenance and repair of the security and access systems, the command and control systems, and the power and environmental systems in the specialized missile systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in industrial maintenance (11/86).

AF-1715-0039

SINGLE SIDEBAND SYSTEM MAINTENANCE

Course Number: AZR30473.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 16 weeks (480 hours).

Exhibit Dates: 9/60–12/68.

Objectives: To train enlisted personnel to operate and maintain single-sideband communications systems.

Instruction: Lectures and laboratories in electronic principles and circuit analysis, troubleshooting and maintenance techniques, and testing, alignment, and repair of single-sideband transmitting and receiving equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour as an elective in communications engineering, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0040

GUNLAYING SYSTEM MECHANIC, B-47

Course Number: AB32330C.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26 weeks (780 hours).

Exhibit Dates: 8/54–12/68.

Objectives: To train enlisted personnel to isolate unit malfunctions and to perform organizational and field maintenance on turret assemblies, including gunlaying radar.

Instruction: Lectures and laboratories in fundamentals of DC and AC circuits, vacuum and gas-filled tubes, power supplies, voltage regulators, amplifiers, oscillators, oscilloscopes, and radar system components and circuits.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0041

GUNLAYING SYSTEM MECHANIC, B-36

Course Number: AB32330B.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 28 weeks (840 hours).

Exhibit Dates: 8/54–12/68.

Objectives: To train enlisted personnel to isolate unit malfunctions and to perform organizational and field maintenance on turret system assemblies, including gunlaying radar.

Instruction: Lectures and laboratories in fundamentals of DC and AC circuits, vacuum and gas-filled tubes, power supplies, voltage regulators, amplifiers, oscillators, oscilloscopes, and radar system components and circuits.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0042

Solid State Devices and Digital Techniques

Course Number: 3AZR30070-003.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS.

Length: 5 weeks (152 hours).

Exhibit Dates: 7/73-12/73.

Objectives: To train enlisted personnel in the principles of solid-state devices and digital techniques.

Instruction: Lectures and practical exercises in solid-state devices, parameters, integrated circuits, numbering systems, logic functions and circuits, counters, registers and A-D converters.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in digital systems (3/74).

AF-1715-0043

Missile Systems Maintenance Specialist by Correspondence

Course Number: 31650T.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/82–Present.

Objectives: Personnel is trained as missile maintenance specialist.

Instruction: This correspondence course provides instruction in the maintenance of military missile systems. Specific content includes maintenance management, corrosion control, electronic principles, special circuits, digital principles, digital logic, Boolean algebra, sequential logic, maintenance of specific missile power and control systems, electronic systems testing, and analysis of missile control system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in industrial maintenance, 3 in instrumentation (11/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in fundamentals of digital techniques and 1 in electronics (11/86).

AF-1715-0044

Solid State Devices and Digital Techniques

Course Number: 3AZR30070-001.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS.

Length: 2–3 weeks (78 hours).

Exhibit Dates: 7/73–12/73.

Objectives: To train enlisted personnel in digital techniques.

Instruction: Lectures and practical exercises in numbering systems, logic functions and circuits, counters, registers, and A-D converters.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in digital systems (3/74).

AF-1715-0045

Instrumentation Mechanic by Correspondence

Course Number: 31653.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/83–Present.

Objectives: Personnel is trained as instrumentation mechanics.

Instruction: This correspondence course provides instruction in instrumentation mechanics including maintenance management, corrosion control, instrumentation principles, instrumentation test equipment and tools, transducers, lazers, digital logic and Boolean algebra, instrumentation systems, analog signal conditioners, modulation and multiplexing systems, radio frequency components, and instrumentation ground stations.

Credit Recommendation: In the vocational certificate category, 3 semester hours in instrumentation (11/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in electronic instrumentation, and 1 in fundamentals of digital techniques (11/86).

AF-1715-0046

Bomb Navigation Systems Specialist (B-52G/H: ASQ-176, ASQ-151 Systems) by Correspondence

Course Number: 32150.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/86–Present.

Objectives: A review of electronic principles as applied to maintenance of B-52G/H systems, ASQ-176, and ASQ-151.

Instruction: This is a correspondence course which offers a review of electronic principles, sequential logic, semi-conductor devices, electro-optical viewing systems and radar.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/86).

AF-1715-0047

Defensive Fire Control Systems Mechanic (B-52D/G: MD-9, ASG-15 Turrets) by Correspondence

Course Number: 32151G.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/83–Present.

Objectives: The student will be trained in the maintenance and alignment of fire control systems, ASG-15 turret.

Instruction: Course covers basics of radar, modes of operation of ASG-15 radar, operation of caliber 0.50 machinegun and specific test equipment such as AN/UPM-33 Radar Test Set, AN/UPM-141 radar test set.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basics of radar (11/86).

AF-1715-0048

Telephone Equipment Installer-Repairman

Course Number: 3ABR36234; ABR36234.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 19-20 weeks (540-600 hours).

Exhibit Dates: 1/66–6/73.

Objectives: To train enlisted personnel to install, repair, and maintain telephone equipment.

Instruction: Lectures and practical exercises in fundamentals of AC and DC, AC motors and synchros, basic transistor theory, power supplies and regulators, and relays and stepping switches.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics (3/74).

AF-1715-0049

Bomb Navigation System Mechanic (B-52G/H:ASQ-38, ASQ-151 Systems) by Correspondence

Course Number: 32150K.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/80–10/88.

Objectives: A review of electronic principles as applied to maintenance of B-52G/H systems, ASQ-38, and ASQ-151.

Instruction: Materials for this correspondence course include review of basic electricity, fundamentals of electronic tubes and semi-conductors, digital logic, basics of radar and soldering fundamentals.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronics survey (11/86).

AF-1715-0050

Weapon Control Systems Mechanic (A-7D, A-10, AC-130, F-5) by Correspondence

Course Number: 32152.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84–Present.

Objectives: The student will be trained in maintenance of fire control systems including the APQ-153, AN/ASG-29, and tactical computers set AN/ASN-91.

Instruction: This is a correspondence course which offers subjects including principles of electronics (diodes and power supplies, transistor circuits, oscillators, logic circuits) as well as description of specific military equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basics of electronics (11/86).

AF-1715-0051

Weapon Control Systems Mechanic (F-106A/B: MA-1, ASQ-25 Systems) by Correspondence

Course Number: 32152A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/85–5/88.

Objectives: To provide training for maintenance of fire control systems including the ASQ-25.

Instruction: This is a correspondence course with topics including electrical circuit analysis, and basic electronics as well as aircraft navigation fundamentals and specialized test equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic DC/AC electricity, and 1 in basic electronics (11/86).

AF-1715-0052

Weapon Control Systems Mechanic (F-4C/D: APQ-109/APA-165) by Correspondence

Course Number: 32152P.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/84-Present.
Objectives: To provide training in maintenance of fire control systems including the APQ-109/APA-165.
Instruction: This correspondence course includes electric circuit analysis and basics of vacuum tube circuits, along with theory and operation of radio equipment APQ-109/APA-165.
Credit Recommendation: In the vocational certificate category, 1 semester hour in basic DC/AC circuit analysis (11/86).

AF-1715-0053

Weapon Control Systems Mechanic (F-4E: APQ-120) by Correspondence

Course Number: 32152Q.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/83-Present.
Objectives: To provide training for maintenance of fire control systems including the APQ-120.
Instruction: Contents presented in this correspondence course include basic electronic circuits using semiconductors, along with theory and maintenance of radar equipment APQ-120.
Credit Recommendation: In the vocational certificate category, 1 semester hour in semiconductor circuits (11/86).

AF-1715-0054

Weapon Control Systems Mechanic (A-7D: AN/APQ-126) by Correspondence

Course Number: 32152S.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/78-Present.
Objectives: To provide training for maintenance of fire control systems including the AN/APQ-126.
Instruction: Materials are offered through a correspondence course including basic electronic circuitry along with specific maintenance instructions for the AN/APQ-126 radar system.
Credit Recommendation: In the vocational certificate category, 1 semester hour in transistor circuitry, and 1 in introduction to number systems and digital logic (11/86).

AF-1715-0055

Weapon Control Systems Technician (F-5E, A-7D, A-10, and AC-130) by Correspondence

Course Number: 32172.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 4/83-3/88.
Objectives: The student will be provided a review of digital logic principles and devices as required for upgrade training to Level 7 AFSC.
Instruction: This is a correspondence course providing a brief review of number systems, digital components and standard test equipment.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0056

Weapon Control Systems Technician (F-4C/D: APQ-109/APA-165) by Correspondence

Course Number: 32172P.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 5/83-Present.
Objectives: The student will be trained in the maintenance of radar sets APQ-109 and APA-165 as required for upgrade to Level 7 AFSC.
Instruction: This is a correspondence course with topics including specific information on operation and maintenance of radar sets APQ-109 and APA-165.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/86).

AF-1715-0057

Electronic Computer Repairman (DPC/465L)

Course Number: ABR30533-8.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 41 weeks (1140 hours).
Exhibit Dates: 1/65-8/68.
Objectives: To train enlisted personnel to be electronic computer systems repairmen.
Instruction: Lectures and practical exercises in electronic computer systems repair, including electronic and data processing principles, malfunction analysis, maintenance concepts, data processing central computer equipment maintenance, component malfunction isolation and repair. Instruction includes 465L computer system equipment, digital techniques, circuit logic, and aerospace ground equipment component malfunction isolation and repair.
Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0058

Electronic Computer Systems Repairman (FSQ-7/SAGE)
(Electronic Computer Repairman (SAGE AN/FSQ-7))
(Electric Digital Computer Repairman (SAGE AN/FSQ-7))

Course Number: 3ABR30534A-1; 3ABR30533A-1; ABR30533-1.
Location: School of Applied Aerospace Sciences, Keesler AFB, MS.; 3380th Technical School, Keesler AFB, MS.
Length: 32-47 weeks (960-1320 hours).
Exhibit Dates: 3/64-12/73.
Objectives: To provide airmen with the knowledge of computer logic, organization, and internal programming necessary to perform maintenance and repair on the SAGE FSQ-7 electronic computer.
Instruction: Lectures and practical exercises in SAGE FSQ-7 computer system fundamentals, including logic symbology and index, alphanumeric codes, registers, internal instructions and programs, instruction/command decoding, computer alarms and manual control, memories, cores and drums, digital display generators, output control and storage, peripheral input/output devices, and computer systems maintenance procedures. Additional instruction in electronic fundamentals for digital data processing equipment repairmen, including DC electrostatic principles through series-parallel circuits; AC principles through series-parallel resonant circuits; motors; saturable reactors; magnetic amplifiers; servos, synchros, and servo amplifiers; fundamentals of tubes and transistors; rectifiers; filters; time constants; power supplies; voltage regulators; soldering techniques; triodes; tetrodes; pentodes; transistors; special-purpose tubes; amplifiers and oscillators, including blocking oscillators, passive and active limiters, clampers, and amplifier circuits; synchroscope; transients; shock-excited Hartley, Astabel, oneshot, and bistabe multivibrators; thyratron, sawtooth, trapezoidal, and transistor sweep circuits; computer circuits and computing techniques; binary, ocatal, and binary excess-three codes; computer history; AN-OR gates, matrices, Boolean algebra, logic generators, and associated circuits; special-purpose amplifiers and gating circuits; counters, count detection, decoders, encoders, registers, conversion circuits, memory circuits and storage device principles; input/output devices; and coding principles.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in computer science (3/74).

AF-1715-0059

Electronic Computer Repairman (Display Equipment/412L)
(Electronic Digital Computer Repairman (Display Equipment/412L))

Course Number: ABR30533-5.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 15 weeks (450 hours).
Exhibit Dates: 3/64-12/68.
Objectives: To train enlisted personnel to inspect and maintain display equipment associated with 412L air weapons control system.
Instruction: Lectures and laboratories in electronic digital data computer principles, AWCS 412L familiarization, application and operation of test equipment, maintenance management, circuit analysis, and troubleshooting procedures.
Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours as an elective in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0060

Aircraft Control and Warning Radar Repairman (AN/FPS-18, AN/FST-1, AN-FSA-10, AN/FSW-1)

Course Number: AB30332-F.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 37 weeks (1020 hours).
Exhibit Dates: 3/58-12/68.
Objectives: To train enlisted personnel to operate, tune, align, inspect, and maintain aircraft control and warning radar equipment and associated quantizing and video combining equipment.
Instruction: Lectures and laboratories in DC and AC circuit analysis, magnetism, vacuum tube and solid-state devices, transmitter and receiver principles, equipment maintenance, and troubleshooting.
Credit Recommendation: In the upper-division baccalaureate category, 3 smeester hours in electricity and electronics (3/74).

AF-1715-0061

ELECTRONIC ANALOG DATA PROCESSING
EQUIPMENT REPAIRMAN

Course Number: ABR30532.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 35 weeks (960 hours).

Exhibit Dates: 9/59–12/68.

Objectives: To train enlisted personnel to operate, inspect, and maintain radar systems and related test equipment.

Instruction: Lectures and laboratories in AC and DC circuits, circuit analysis, electron tubes and power supplies, and troubleshooting procedures. Much of the course material is obsolete, dealing primarily with vacuum tubes and their applications; however, some credit should be given in the areas of basic circuits, laboratories, hand skills, circuit analysis, and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as a technical elective in electronics (3/74).

AF-1715-0062

AN/FYQ-45 AND AN/FYA-38
MAINTENANCE

Course Number: 2ASR30573-4.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 10 weeks (312 hours).

Exhibit Dates: 2/69–12/73.

Objectives: To train enlisted personnel to maintain operations control consoles and computer interface buffers used with the Air Force integrated command and control system.

Instruction: Lectures and practical exercises in introduction to computer programming, central processors, static and dynamic displays, input/output equipment, system maintenance, and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as a technical elective in computer subjects (3/74).

AF-1715-0063

WEAPON CONTROL SYSTEMS TECHNICIAN
(F-4E: APQ-120) BY
CORRESPONDENCE

Course Number: 32172Q.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/86–Present.

Objectives: The student is provided a review of digital logic principles and devices as required for upgrade training to Level 7 AFSC.

Instruction: This is a correspondence course presenting brief review of number systems, digital components and standard test equipment.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0064

1. AIRCRAFT CONTROL AND WARNING RADAR TECHNICIAN
2. AIRCRAFT CONTROL AND WARNING RADAR MAINTENANCE TECHNICIAN
3. AIRCRAFT CONTROL AND WARNING RADAR MAINTENANCE TECHNICIAN

Course Number: *Version 1:* AAR30372. *Version 2:* AAR30372. *Version 3:* AA30372.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 40 weeks (1200 hours). *Version 2:* 34 weeks (1020 hours). *Version 3:* 19 weeks (570 hours).

Exhibit Dates: *Version 1:* 2/64–12/68. *Version 2:* 7/59–1/64. *Version 3:* 10/55–6/59.

Objectives: To provide enlisted personnel with elementary theory and test procedures to enable them to repair and maintain aircraft control and warning radar equipment.

Instruction: *All Versions:* Lectures and practical experience in aircraft control and warning radar manuals and facilities, power supply regulation and distribution, trigger generation, transmitters, oscillators and amplifiers at radar frequencies, microwave plumbing, antenna design and control, system alignment, anti-jamming devices, MTI receivers, interference elimination, PPI systems and alignment procedures, range-height indicator systems, countermeasure monitors and receivers, IFF systems. *Version 2:* Includes additional circuit analysis, transformer ratings and performance, power supplies, rectifiers, filters, regulators, vacuum tube characteristics, timing circuits, integrator and differentiator circuits, pulse-forming networks, r-f transmission lines, matching stubs, duplexers, servos and resolvers, radar test sets, synchroscopes, troubleshooting, shop manuals, supervision, planning, and alignment. *Version 3:* Includes additional laboratory-type testing, calibration and measurement procedures on radar transmitter and receiver apparatus, frequency, bandwidth, spectral distribution, noise levels, shop management and supervision.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in business organization and management (12/68), 3 as an elective in electronics (3/74). *Version 2:* UP 3 semester hours in business organization and management (12/68), 3 as an elective in electronics (3/73). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in business organization and management (12/68), 2 as an elective in electronics (3/74).

AF-1715-0065

1. AIRCRAFT RADIO REPAIRMAN
2. AIRCRAFT RADIO REPAIRMAN (COMMUNICATIONS)
3. AIRCRAFT RADIO REPAIRMAN (GENERAL)
4. AIRCRAFT RADIO REPAIRMAN (GENERAL)

Course Number: *Version 1:* 3ABR30130; ABR30130. *Version 2:* ABR30130B. *Version 3:* AB30130B. *Version 4:* AB30130B-2.

Location: *Version 1:* 3380th Technical School, Keesler AFB, MS. *Version 2:* 3380th Technical School, Keesler AFB, MS. *Version 3:* 3310th Technical School, Scott AFB, IL. *Version 4:* 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 29–30 weeks (840–870 hours). *Version 2:* 33 weeks (900 hours). *Version 3:* 26 weeks (780 hours). *Version 4:* 28 weeks (840 hours).

Exhibit Dates: *Version 1:* 8/59–12/73. *Version 2:* 8/58–7/59. *Version 3:* 2/56–7/58. *Version 4:* 8/55–1/56.

Objectives: To train enlisted personnel to operate, tune, align, maintain, and repair airborne communications equipment and related test equipment.

Instruction: *All Versions:* Lectures and practical experience in airborne communications equipment and related test equipment operation, maintenance, and repair, including power supplies operation principles and troubleshooting procedures; the frequency spectrum; resonance; magnetism principles; transformers and vacuum tubes operation; operation and maintenance of video and push-pull amplifiers, oscillators, AM modulators, superheterodyne receivers, and transmission lines and antennas; familiarization with volts, ohms, and milliammeters; use of oscilloscopes; and soldering techniques. Emphasis is on aircraft navigational equipment alignment, calibration, troubleshooting, and repair. *Version 1:* Instruction includes principles of solid-state devices, FM modulation, discriminators, and signal sideband. *Version 3:* Instruction includes minimal theoretical material and emphasizes aircraft radio system maintenance, troubleshooting, and repair. *Version 4:* Instruction includes principles of FM modulation, discriminators, pulse modulation, and principles of motors.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the upper-division baccalaureate category, credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 4:* In the upper-division baccalaureate category, 4 semester hours in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0066

AIRCRAFT RADIO REPAIRMAN (COMMAND)

Course Number: AB30130A-2.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 25 weeks (750 hours).

Exhibit Dates: 8/55–12/68.

Objectives: To train enlisted personnel to operate, tune, align, maintain, and repair airborne command communications equipment and related test equipment.

Instruction: Lectures and practical experience in principles of electricity and magnetism; alternating current; vacuum tubes, power supplies, and voltage regulators; amplifiers and oscillators; modulation, detection, and receiver kit construction; special circuits; transmission, generation, and propagation of microwave and high-frequency energy and synchros; and practical applications of electricity fundamentals to communications equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hours in electrical laboratory (3/74).

AF-1715-0067

1. AIRCRAFT RADIO MAINTENANCE TECHNICIAN
2. AIRCRAFT RADIO MAINTENANCE TECHNICIAN
3. AIRBORNE RADIO MAINTENANCE TECHNICIAN

Course Number: *Version 1:* AAR30170. *Version 2:* AA30170X. *Version 3:* AA30170.

Location: *Version 1:* 3380th Technical School, Keesler AFB, MS. *Version 2:* 3380th Technical School, Keesler AFB, MS. *Version 3:* 3310th Technical School, Scott AFB, IL.

Length: *Version 1:* 33–39 weeks (990–1170 hours). *Version 2:* 19–23 weeks (570–690 hours). *Version 3:* 19–23 weeks (570–690 hours).

Exhibit Dates: *Version 1:* 8/59–12/68. *Version 2:* 1/54–7/59. *Version 3:* 1/54–7/59.

Objectives: To provide technicians with advanced training in aircraft communications equipment circuit theory, maintenance principles, and procedures.

Instruction: *All Versions:* Lectures and practical experience in aircraft communications equipment circuit theory, maintenance principles, and procedures. *Version 1:* Includes review of algebra, Boolean algebra, trigonometry, and logarithms; review of AC and DC circuits, including magnetic circuits, transformers, motors, and servo systems; vacuum tube and semiconductor theory and application to power supplies, regulators, amplifiers, limiting and peaking circuits, multivibrators and basic logic circuits; DC, audio, video, RF, and IF amplifiers analysis; wave-guide properties; transmission lines and antennas familiarization; klystron and magnetron operation principles; and AM, FM, and SSB systems operation principles. *Version 2:* Instruction emphasizes maintenance, troubleshooting, and repair of specific transmitters and receiving equipment, and includes functional system operation and test equipment use. *Version 3:* Instruction emphasizes maintenance, troubleshooting, and repair of specific transmitters and receiving equipment, and includes functional system operation and test equipment use.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, 3 in maintenance management, and, on the basis of institutional evaluation, credit in electrical laboratory (3/74). *Version 2:* In the upper-division baccalaureate category, credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the upper-division baccalaureate category, credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0068

Avionic Sensor Systems Specialist
(Reconnaissance Electronic
Sensors) by Correspondence

Course Number: 32252A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/83–Present.

Objectives: Upon completion of the course, the student will be provided the training required to upgrade enlisted personnel from the apprentice level to the specialist level in avionic sensor systems specializing in reconnaissance electronic sensors.

Instruction: Correspondence materials for this course include shop practices and test equipment, electronics principles, IR sensors and radar sensors.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics principles, 1 in radar principles (11/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in digital principles (11/86).

AF-1715-0069

Aircraft Radio Repairman
(Navigational)
(Aircraft Radio Repairman)

Course Number: ABR30130C; AB30130C; AB30130-1.

Location: 3380th Technical School, Keesler AFB, MS.; 3310th Technical School, Scott AFB, IL.

Length: 29–33 weeks (840–969 hours).

Exhibit Dates: 12/54–12/68.

Objectives: To train enlisted personnel to test, troubleshoot, and maintain airborne navigational equipment.

Instruction: *All Versions:* Lectures and practical experience in navigational equipment maintenance, testing, and troubleshooting, including schematic diagrams familiarization, AC nomenclature; series and parallel DC circuits and motors; principles of magnetism, resonance, and time constants; transformers and vacuum tubes; power supplies operation and troubleshooting; audio and video amplifiers; oscillators; AM and FM modulation; superheterodyne receivers and wave-shaping circuits; familiarization with volts, ohms, and milliammeters; and soldering techniques. Emphasis is on alignment, calibration, and repair of aircraft navigational equipment.After 1958, the instruction included familiarization with semiconductor devices.From 1955 until 1958, the instruction emphasized aircraft navigational equipment alignment, calibration, and repair, with little time devoted to basic theoretical material.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electronics laboratory on the basis of institutional evaluation (3/74).

AF-1715-0070

Avionic Sensor Systems Specialist
(Tactical/Real Time Display
Electronic Sensors) by
Correspondence

Course Number: 32252B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/83–Present.

Objectives: The student will be provided the training required to upgrade enlisted personnel from the apprentice level to the specialist level in avionics sensor systems specializing in display electronic sensors.

Instruction: Course provides correspondence materials covering shop practices and test equipment, basic electricity and electronics and a number of specific military display systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electricity and electronics (11/86).

AF-1715-0071

Avionic Sensor Systems Specialist
(Electro-Optical Sensors) by
Correspondence

Course Number: 32252C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/83–Present.

Objectives: The student will be provided the training required to upgrade enlisted personnel from the apprentice level to the specialist level in avionics sensor systems specializing in electro-optical sensors.

Instruction: Course is presented through correspondence materials including shop practices and test equipment, electronics and the maintenance of specific military electro-optical systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electronics and troubleshooting (11/86).

AF-1715-0072

AN/MRC-107A, I/O Maintenance

Course Number: 3AZR30454-8.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS.

Length: 6 weeks (224 hours).

Exhibit Dates: 4/73–12/73.

Objectives: To train enlisted personnel with basic electronics backgrounds to operate, maintain, and inspect the AN/MRC-107 radio transceiver.

Instruction: Lectures and practical demonstrations in AN/MRC-107 radio transceiver operation, inspection, and maintenance, including schematic diagram use in explaining circuit operation, problem theorizing, and troubleshooting methods; balanced modulator, frequency divider, power amplifier control, and sidetone circuits operation; measurement of frequency stability, frequency response, distortion, and noise level; and use of signal generator, RF wattmeters, oscilloscopes, audio oscillator, output power meter, multimeter, frequency counter, frequency meter, wide band amplifier, VHF signal generator, sweep frequency generator, dummy load, RF simulator, and spectrum analyzer. Instruction includes semiconductor theory and techniques, and use of latest equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics for non-engineering majors (3/74).

AF-1715-0073

Precision Measuring Equipment
Specialist by Correspondence

Course Number: 32450.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/83–Present.

Objectives: Training is provided to upgrade enlisted personnel from the apprentice level to the specialist level in precision measurement equipment.

Instruction: These correspondence materials includes specific military equipment used for voltage and power measurement, waveform analysis, microwave measurements and time domain data and standards.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0074

Precision Measuring Equipment
Technician by Correspondence

Course Number: 32470.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/84–Present.

Objectives: Training is provided to upgrade enlisted personnel from the specialist level to technician level in precision measuring equipment.

Instruction: These correspondence materials include survey treatment of typical precision laboratory equipment. Brief descriptions of the theory of operation of equipment for dimensional measurements, electrical measurements and nuclear radiation measurements are included.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0075

Automatic Flight Control Systems
Specialist by Correspondence

Course Number: 32550.

Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 11/84–6/90.
Objectives: To provide the training required to upgrade enlisted personnel from apprentice level to specialist level in automatic flight control systems.
Instruction: These correspondence materials include a survey of basic electrical and electronic theory and more in-depth treatments of specific aircraft flight control systems including those for the B52 G/H and the C141.
Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electrical theory (11/86).

AF-1715-0076

Avionics Aerospace Ground Equipment Specialist by Correspondence

Course Number: 32650.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 9/74–Present.
Objectives: The student will be knowledgeable in the basics of semiconductor theory, amplifiers and computer systems as well as test stations and avionics.
Instruction: This course consists of correspondence study, with on-the-job supervision, and proctored testing. Topics include transistor theory, amplifiers, computer systems and maintenance.
Credit Recommendation: In the vocational certificate category, 2 semester hours in semiconductor circuits, and 1 in digital fundamentals (11/86).

AF-1715-0077

Avionics Aerospace Ground Equipment Specialist (F/RF-4 Peculiar Avionics AGE) by Correspondence

Course Number: 32650C.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/84–Present.
Objectives: The student will be knowledgeable in the basics of amplifiers, logic devices, computers and avionics maintenance.
Instruction: Materials are presented through correspondence study with on-the-job supervision and proctored testing. Topics includes transistor amplifiers, logic devices, computers and maintenance.
Credit Recommendation: In the vocational certificate category, 1 semester hour in transistor amplifiers, and 1 in computers (11/86).

AF-1715-0078

A-7D Avionics Aerospace Ground Equipment Specialist by Correspondence

Course Number: 32650D.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 9/85–Present.
Objectives: To provide the basics of semiconductors, digital circuits, and test equipment.
Instruction: This a correspondence course with on-the-job supervision and proctored testing. Topics includes semiconductor devices, digital logic, Boolean algebra, sequential and combination logic and test equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in digital circuits (11/86).

AF-1715-0079

Radio Relay Equipment Repairman (FPTS)
(Radio Relay Equipment Repairman (FPTS)(AN/FRC-39 and AN/FRC-39A))
(Ground Communications Equipment Repairman (Heavy)(FPTS))

Course Number: AZR30450; AZR30453-1.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 4–7 weeks (120–210 hours).
Exhibit Dates: 9/60–12/68.
Objectives: To train radio equipment repairmen to operate, maintain, and repair forward propagation tropospheric scatter equipment.
Instruction: Lectures and practical exercises in forward propagation tropospheric scatter equipment operation, alignment, adjustment, maintenance, performance checks, and troubleshooting via meter readings, wave shapes and block, wiring, and schematic diagrams; telephone, telegraph, and auxiliary terminal equipment operation; scatter communications concepts and techniques; and radio system transmitter exciter, power amplifier, power supply, and receiver circuits operation, maintenance, and repair.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics laboratory (3/74).

AF-1715-0080

Avionics Instrument Systems Specialist by Correspondence

Course Number: 32551.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 3/85–6/90.
Objectives: To provide the training required to upgrade enlisted personnel from apprentice level to specialist level in avionic instrument systems.
Instruction: Correspondence materials include a survey of basic electrical and electronic theory and the theory of operation of typical flight instruments. Specific flight instruments are used as examples and to illustrate the theory.
Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electricity (11/86).

AF-1715-0081

Integrated Avionics Electronic Warfare Equipment and Component Specialist (F/FB-111) by Correspondence

Course Number: 32653A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 12/84–Present.
Objectives: The student will be knowledgeable in the basics of electronic principles and electronic countermeasure principles as well as ECM systems and ECM test equipment for F-111 aircraft.
Instruction: This is a correspondence course with on-the-job supervision and proctored testing. Topics include solid state regulators, basic logic principles, digital integrated circuits, digital troubleshooting techniques, receiver fundamentals, ECM principles. F-111 ECM systems and test equipment are also coverd.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital fundamentals (11/86).

AF-1715-0082

Integrated Avionics Electronic Warfare Equipment and Component Specialist (F-15) by Correspondence

Course Number: 32653B.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 3/84–Present.
Objectives: To provide the basics of solid state technology and introduction to the TEWS intermediate test station and maintenance management.
Instruction: This is a correspondence course with on-the-job supervision and proctored testing. Topics include basic semiconductor theory, basic logic principles, digital integrated circuits and TEWS test station control and management.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital fundamentals (11/86).

AF-1715-0083

Integrated Avionics Manual Test Station and Component Specialist by Correspondence

Course Number: 32655.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 5/84–11/88.
Objectives: To provide the basics of digital circuits.
Instruction: Materials are presented as a correspondence course with on-the-job supervision and proctored testing. Topics include basic digital circuits and troubleshooting techniques.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital circuit fundamentals (11/86).

AF-1715-0084

Integrated Avionics Computerized Test Station and Component Specialist (F-16) by Correspondence

Course Number: 32654C.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/84–6/89.
Objectives: To provide the basics of digital computers as well as automatic test equipment and communications systems for for the F-16.
Instruction: This is correspondence study with on-the-job supervision and proctored testing. Topics include basic digital circuits, troubleshooting techniques, automatic test equipment and communications systems.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital circuit fundamentals (11/86).

AF-1715-0085

Radio Relay Equipment Repairman (Microwave and Associated Relay Center Equipment)
(Radio Relay Equipment Repairman (Microwave))

Course Number: ABR30430A.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 32-36 weeks (870-990 hours).
Exhibit Dates: 8/58-12/68.
Objectives: To train enlisted personnel to install, test, maintain, and repair microwave, multiplexing, and radio relay equipment.
Instruction: Lectures and practical exercises in trigonometry, DC and AC circuit analysis, electronic fundamentals, power supplies, amplifiers, oscillators, microwave propagation, multiplexing and microwave radio relay equipment, motor and servo mechanisms. Motor and servo mechanisms; semiconductor devices and circuits are also covered.
Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0086

Integrated Avionics Computerized Test Station and Component Specialist (F-15) by Correspondence

Course Number: 32654B.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 12/84-Present.
Objectives: To provide the basics of digital computer foundamentals as well as test station computers and automatic test equipment for the F-15.
Instruction: Materials are presented through correspondence study with on-the-job supervision and proctored testing. Topics include digital fundamentals, troubleshooting and automatic test equipment and test stations.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital fundamentals (11/86).

AF-1715-0087

Integrated Avionics Computerized Test Station and Component Specialist (F/FB-111) by Correspondence

Course Number: 32654A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 1/83-Present.
Objectives: To provide the basics of digital computers as well as automatic test equipment and test stations for the F-111.
Instruction: Course is offered as correspondence study with on-the-job supervision and proctored testing. Topics include fundamentals of digital computers and circuits, troubleshooting techniques and automatic test equipment and test stations.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in digital computer fundamentals (11/86).

AF-1715-0088

Ground Radio Communications Equipment Technician

Course Number: AAR30474.
Location: 3380th Technical School, Keesler AFB, MS.
Length: 39 weeks (1170 hours).
Exhibit Dates: 12/63-12/68.
Objectives: To train enlisted personnel to install, maintain, and repair communications equipment.
Instruction: Lectures and laboratories in applied mathematics; AC and DC circuits; vacuum tubes and solid-state devices; power supplies; oscillators; digital data processing; and analysis, maintenance, and repair of various functional electrical circuits.
Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity or electronics (3/74), 2 in shop management (12/68), and additional credit in electrical and radio laboratory on the basis of institutional evaluation (3/74).

AF-1715-0090

Integrated Avionics Attack Control Systems Specialist (F/FB-111) by Correspondence

Course Number: 32656A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 2/84-Present.
Objectives: The basics of the F-111 radar and navigation systems are provided.
Instruction: This is presented through correspondence study with on-the-job supervision and proctored testing. Topics include F-111 familiarization, display systems, radar and navigation systems.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/86).

AF-1715-0091

Integrated Avionics Attack Control Systems Specialist by Correspondence

Course Number: 32656.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 5/85-Present.
Objectives: An overview of electronics, computer systems and communications is provided.
Instruction: This is a correspondence course with on-the-job supervision and proctored testing. Topics includes basic tools and wiring, solid state, integrated circuits, logic gates, computer systems, communications and maintenance management.
Credit Recommendation: In the vocational certificate category, 2 semester hours in mechanical tools and wiring, 2 in computer fundamentals and systems (11/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in communications (11/86).

AF-1715-0092

Integrated Avionics Manual Test Station and Component Specialist (F-15) by Correspondence

Course Number: 32655B.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 1/84-Present.
Objectives: The student will be knowledgeable in the basic test equipment, airborne navigational systems and test stations.
Instruction: This is a correspondence course with on-the-job supervision and proctored testing. Equipment covered includes circuit, voltage and resistance measurements, waveform analysis and UHF communications testing.
Credit Recommendation: In the vocational certificate category, 3 semester hours in test equipment and measurements (11/86).

AF-1715-0093

Integrated Avionics Manual Test Station and Component Specialist (F/FB-111) by Correspondence

Course Number: 32655A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 5/84-Present.
Objectives: The student will become knowledgeable in the basic test equipment, airborne navigational systems and test stations.
Instruction: This is a correspondence course with on-the-job supervision and proctored testing. Equipment covered includes current, voltage and resistance measurements, waveform analysis and UHF communications testing.
Credit Recommendation: In the vocational certificate category, 3 semester hours in test equipment and measurements (11/86).

AF-1715-0094

Integrated Avionics Instrument and Flight Control Systems Specialist (F/FB/EF-111) by Correspondence

Course Number: 32657A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 2/85-Present.
Objectives: Training is provided to upgrade to specialist level in integrated avionics instrument and flight controls for F/FB/EF-111 aircraft.
Instruction: Course consists of correspondence materials including aircraft familiarization and aircraft (F/FB/EF-111) instruments and flight controls.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0095

Integrated Avionic Instrument and Flight Control Systems Specialist by Correspondence

Course Number: 32657.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/83-Present.
Objectives: The required training is provided to upgrade enlisted personnel from apprentice to specialist level in integrated instrument and flight controls (also requires 32657A, 32657B, or 32657C).
Instruction: Correspondence materials including aircraft maintenance management and survey materials in digital and computer fundamentals and common laboratory hand tools are presented.
Credit Recommendation: In the vocational certificate category, 1 semester hour in tool

usage, 2 in digital and computer fundamentals (11/86).

AF-1715-0096

Integrated Avionic Attack Control Systems Specialist (F-16) by Correspondence

Course Number: 32656C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/85–Present.

Objectives: The basics of the F-16 navigation and fire control systems are provided.

Instruction: Curriculum materials for this correspondence course offer on-the-job supervision and proctored testing. Topics include F-16 familiarization, display systems, airborne video systems and fire control systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/86).

AF-1715-0097

Integrated Avionics Attack Control Systems Specialist (F-15) by Correspondence

Course Number: 32656B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/84–Present.

Objectives: The basics of the F-15 radar and navigation systems are provided. This is correspondence study with on-the-job supervision

Instruction: and proctored testing. Topics include F-15 familiarization, display and control system, radar and test systems.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (11/86).

AF-1715-0098

Integrated Avionics Instrument and Flight Control Systems Specialist (F-15) by Correspondence

Course Number: 32657B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/84–Present.

Objectives: Training is provided to upgrade enlisted personnel from apprentice level to specialist level in integrated avionic instrument and flight controls for F-15 aircraft.

Instruction: Correspondence materials including fundamentals of F-15 aircraft maintenance and F-15 instruments and flight control systems comprise this course.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0099

Integrated Avionics Instrument and Flight Control Systems Specialist (F-16) by Correspondence

Course Number: 32657C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/84–Present.

Objectives: Training is provided to upgrade enlisted personnel from apprentice level to specialist level in integrated avionics instruments and flight control systems for F-16 aircraft.

Instruction: The correspondence materials for this course include basic F-16 aircraft maintenance and F-16 instruments and flight control system maintenance.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0100

Integrated Avionics Communication, Navigation, and Penetration Aids Systems Specialist by Correspondence

Course Number: 32658.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/85–Present.

Objectives: Training is provided to upgrade enlisted personnel from apprentice level to specialist level in integrated avionics communications, navigation and penetration aids systems (also requires 32658A, 32658B, or 32658C).

Instruction: Correspondence materials include aircraft maintenance management and survey materials in hand tool usage and digital and computer fundamentals.

Credit Recommendation: In the vocational certificate category, 1 semester hour in tool usage, and 2 in digital and computer fundamentals (11/86).

AF-1715-0101

Integrated Avionics Communication, Navigation, and Penetration Aids Systems Specialist (F/FB-111) by Correspondence

Course Number: 32658A.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/84–Present.

Objectives: Training is provided to upgrade enlisted personnel from apprentice level to specialist level in integrated avionics communication, navigation and penetration aids systems for F/FB-111 aircraft.

Instruction: Offered are correspondence materials including F/FB-111 aircraft familiarization and F/FB-111 communication, navigation and penetration aids system maintenance.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0102

Automatic Teletype and Electronic Switching Systems Repairman

(Electronic Communications and Cryptographic Systems Equipment Repairman (Automatic Teletype))

Course Number: ABR362322; ABR30630A.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 35–36 weeks (960-990 hours).

Exhibit Dates: 9/60–12/68.

Objectives: To train enlisted personnel to perform corrective and preventive maintenance and repair on automatic teletype and electronic switching systems and equipment.

Instruction: Lectures and practical exercises in principles of electricity, including AC and DC circuits, motors, and rectifiers; vacuum tube circuits; amplifiers; basic pulse techniques; teletype system principles; and central office switching techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0103

Aircraft Control and Warning Radar Repairman (AN/FPS-3, AN/FPS-6)

(Aircraft Control and Warning Radar Repairman (AN/FPS-3, AN/FPS-6 and IFF))

Course Number: ABR30332-2; AB30332C-1; AB30332C.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 29–35 weeks (840–960 hours).

Exhibit Dates: 10/54–12/68.

Objectives: To train enlisted personnel in the operation, tuning, alignment, inspection, organizational maintenance, and repair of aircraft control and warning radar equipment.

Instruction: Lectures and practical exercises in aircraft control and warning radar equipment operation, inspection, maintenance, and repair, including AC and DC circuit theory, electron tubes and power supplies; amplifiers and oscillators; transistors; special circuits, including clippers, clampers, and multivibrators; radar microwave propagation; and special radar circuits and units.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0104

Aircraft Control and Warning Radar Repairman (AN/CPS-1, AN/CPS-4, AN/CPS-5 and IFF)

Course Number: AB30332A.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 28 weeks (840 hours).

Exhibit Dates: 10/54–12/68.

Objectives: To train enlisted personnel in aircraft control and warning radar system operation, tuning, alignment, and organizational maintenance.

Instruction: Lectures and practical exercises in aircraft control and warning radar system operation, tuning, alignment, and organizational maintenance, including AC and DC circuit theory; electron tubes and power supplies; amplifiers and oscillators; transistors; special circuits, including clippers, clampers, and multivibrators; radar microwave propagation; and special radar circuits and units.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics (3/74).

AF-1715-0105

Aircraft Control and Warning Radar Repairman (AN/FPS-8 and AN/FPS-4)

Course Number: ABR30332-3.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 30 weeks (840 hours).

Exhibit Dates: 5/59–12/68.

Objectives: To train enlisted personnel in the operation, tuning, alignment, inspection, organizational maintenance, and repair of aircraft control and warning radar equipment.

Instruction: Lectures and practical exercises in radar equipment operation, inspection, maintenance, and repair, including AC and DC circuit theory; electron tubes and power supplies; amplifiers and oscillators; transistors; special circuits, including clippers, clampers, and multivibrators; radar microwave propagation; and special radar circuits and units.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0106

Integrated Avionics Communications, Navigation, and Penetration Aids Systems Specialist (F-15) by Correspondence

Course Number: 32658B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/84–Present.

Objectives: Training is provided to upgrade enlisted personnel from apprentice level to specialist level in integrated avionics communications, navigation, and penetration aids systems for F-15 aircraft.

Instruction: This program comprises correspondence materials including F-15 aircraft familiarization and F-15 communication, navigation and penetration aids system maintenance.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0107

Radio Relay Equipment Repairman (Relay Center Equipment)

Course Number: ABR30430D.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 28 weeks (750 hours).

Exhibit Dates: 8/58–12/68.

Objectives: To train enlisted personnel at the apprentice level to install, maintain, and repair relay center equipment.

Instruction: Lectures and laboratories in basic DC and AC circuit theory, including Ohm's and Kirchoff's laws, RC and RL transients, and resonant circuits; power supplies; amplifiers; oscillators; special circuits; and special ground communications equipment.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0108

Ballistic Missile Checkout Equipment Specialist, WS-133B

Course Number: ABR31235G-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 44 weeks (1230 hours).

Exhibit Dates: 4/65–12/68.

Objectives: To train enlisted personnel to maintain and repair ballistic missile test equipment.

Instruction: Lectures and laboratories in DC and AC circuits, vacuum tubes and transistors, and computer theory and technology.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0109

Electronic Digital Data Processing Repairman (Input-Output/465L Concentrator)

Course Number: ABR30531-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 37 weeks (1020 hours).

Exhibit Dates: 1/63–12/68.

Objectives: To train enlisted personnel to maintain and repair electronic digital data processing equipment.

Instruction: Lectures and laboratories in DC and AC circuits; vacuum tubes and solid-state devices; electronic circuits, motors, and servos; pulse and timing circuits; Boolean algebra and logic gates; and computer circuits.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics, 2 in digital electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0110

Electronic Digital Data Processing Repairman (Data Processing Equipment/412L)

Course Number: *Version 1:* 3AZR30551-2. *Version 2:* ABR30531-5.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 20 weeks (588 hours). *Version 2:* 42–43 weeks (1170–1200 hours).

Exhibit Dates: *Version 1:* 8/68–12/73. *Version 2:* 7/63–7/68.

Objectives: To train enlisted personnel to inspect and maintain data processing equipment associated with 412L air weapons systems.

Instruction: Lectures and laboratories in DC and AC circuits; vacuum tubes and solid-state devices; electronic circuits, motors, and servos; pulse and timing circuits; Boolean algebra and logic gates; and computer circuits.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electronics, 2 in digital systems, and, on the basis of institutional evaluation, credit in electrical laboratory (3/74).

AF-1715-0111

Aircraft Control and Warning Radar Repairman, AN/FST-2

Course Number: ABR30332G; AB30332G.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 37–39 weeks (1020–1080 hours).

Exhibit Dates: 3/58–12/68.

Objectives: To train enlisted personnel to install, check out, and maintain aircraft control and warning radar equipment.

Instruction: Lectures and laboratories in AC and DC circuits, electronic circuit fundamentals, basic digital computer theory and circuits, microwave techniques, and measurements.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics (3/74).

AF-1715-0112

Integrated Avionics Communications, Navigation, and Penetration Aids Systems Specialist (F-16) by Correspondence

Course Number: 32658C.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/84–Present.

Objectives: Training is provided to upgrade enlisted personnel from apprentice to specialist level in integrated avionics communications, navigation and penetration aid systems for F-16 aircraft.

Instruction: Correspondence materials including F-16 aircraft familiarization and maintenance of F-15 communication, navigation and penetration aids system maintenance are offered in this course.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0113

Integrated Avionics Attack Control Systems Technician by Correspondence

Course Number: 32676.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/83–7/88.

Objectives: Specialty knowledge for upgrade training is provided.

Instruction: This correspondence course includes a review of DC/AC circuits, digital techniques and computer systems basics.

Credit Recommendation: In the vocational certificate category, 1 semester hour in DC/AC circuits (11/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in basics of digital computer systems (11/86).

AF-1715-0114

Integrated Avionic Instrument and Flight Control Systems Technican by Correspondence

Course Number: 32677.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/83–7/88.

Objectives: Specialty knowledge is provided for upgrade training.

Instruction: This is a correspondence course which presents a review of DC/AC circuits, digital techniques and computer systems basics.

Credit Recommendation: In the vocational certificate category, 1 semester hour in DC/AC circuits (11/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in basics of digital computer systems (11/86).

AF-1715-0115

Aircraft Control and Warning Radar Repairman (AN/FPS-20 and AN/FPS-6)

Course Number: AB30332C-2.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 39 weeks (1080 hours).

Exhibit Dates: 3/58–12/68.

Objectives: To train airmen to operate, tune, align, inspect, maintain, and repair AN/FPS-20 and AN/FPS-6 aircraft control and warning radar equipment.

Instruction: Lectures and practical experience in aircraft control and warning radar equipment operation, tuning, alignment, inspection, maintenance, and repair, including AC and DC circuit theory, electron tubes and power supplies, amplifiers and oscillators, transistors, radar microwave propagation, special circuits and units, and clippers, clampers, and multivibrators.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics (3/74).

AF-1715-0116

Communications/Navigations Technician by Correspondence

Course Number: 32870.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/83–Present.

Objectives: To present avionics supervision and management concepts and fundamentals for upgrading technical personnel into supervisory positions.

Instruction: The course presents avionics supervision and management, inspections, and maintenance systems. Also presented are specific Air Force publications and Air Force supply procedures including maintenance management.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (11/86).

AF-1715-0117

Integrated Avionics Communications, Navigation, and Penetration Aids Systems Technician by Correspondence

Course Number: 32678.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/83–7/88.

Objectives: The student will have specialty knowledge for upgrade training.

Instruction: This is a correspondence course including a review of DC/AC circuits, digital techniques and computer system basics.

Credit Recommendation: In the vocational certificate category, 1 semester hour in DC/AC circuits (11/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in basics of digital computer systems (11/86).

AF-1715-0118

Aircraft Control and Warning Radar Repairman (AN/TPS-1D, AN/TPS-10D)

(Aircraft Control and Warning Radar Repairman (AN/TPS-1D, AN/TPS-10D and IFF))

Course Number: ABR303321-1; AB30332B.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 28–34 weeks (810–930 hours).

Exhibit Dates: 10/54–12/68.

Objectives: To train enlisted personnel to operate, maintain, and repair aircraft control and warning radar equipment.

Instruction: Lectures and laboratories in development and application of electronic principles, circuit theory, circuit testing, shop practices, performance logs, maintenance records, and system maintenance. Credit should be granted for circuit theory and analysis courses only.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics (3/74).

AF-1715-0119

Digital Subscriber Terminal Maintenance

Course Number: 3ALR30630F.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 19 weeks (570 hours).

Exhibit Dates: 10/70–12/73.

Objectives: To train enlisted personnel to maintain electronic communications and cryptographic systems equipment.

Instruction: Lectures and practical exercises in logic circuits, operational analysis, troubleshooting, repair, and adjustment of digital subscriber terminal equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in computers or data processing equipment (3/74).

AF-1715-0120

Avionic Communications Specialist by Correspondence

Course Number: 32850.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/85–6/89.

Objectives: The student will have specialty knowledge in upgrade training.

Instruction: This is a correspondence course which includes a review of tube and solid state circuits, digital principles and computer system basics.

Credit Recommendation: In the vocational certificate category, 1 semester hour in DC/AC circuits (11/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in basics of digital computer systems (11/86).

AF-1715-0121

Ground ECM Specialist

Course Number: ABR30330; AB30330.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 29–33 weeks (840–900 hours).

Exhibit Dates: 6/56–12/68.

Objectives: To train enlisted personnel to operate and maintain ground electronic countermeasures receivers, panoramic adaptors, pulse analyzers, direction finders, cameras, recorders, and associated test equipment.

Instruction: Lectures and laboratories in development and application of electronic principles, circuit theory, circuit testing, shop practices, performance logs and maintenance records, simulated ground ECM operations, and electronic analysis of intercepted signals.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0122

Airborne Command Post Communications Equipment Specialist by Correspondence

Course Number: 32855.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/85–Present.

Objectives: The student will be able to provide specialty knowledge for upgrade training.

Instruction: This is a correspondence course which offers a review of tube and solid state circuitry, number system, digital logic and maintenance techniques.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic circuits (11/86).

AF-1715-0123

Airborne Warning and Control Radar Specialist by Correspondence

Course Number: 32852.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/85–Present.

Objectives: The student will be able to provide training to upgrade enlisted personnel from apprentice level to specialist level in Airborne Warning and Control Radar.

Instruction: The course provides correspondence materials to include maintenance supervision, hand tools and general test equipment operation along with survey of digital and computer fundamentals and radar principles. Also included are maintenance training in typical airborne radar equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in tool usage and general test equipment operation (11/86); in the lower-division baccalaureate/associate degree category, 1 semester hour in digital and computer fundamentals, and 1 in radar principles (11/86).

AF-1715-0125

Cable and Antenna Systems Installation/Maintenance Specialist by Correspondence

Course Number: 36150.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 10/88–Present. *Version 2:* 2/83–9/88.

Objectives: The student will be trained as a cable and antenna systems installation/maintenance specialist.

Instruction: This correspondence course provides instruction in cable and antenna systems installation and maintenance. The course includes wire maintenance techniques, cable systems installation and maintenance, advanced antenna systems installation and maintenance, and antenna systems testing equipment.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 3 semester hours in communication systems (cable systems) (11/86).

AF-1715-0126

Cable Splicing Installation and Maintenance Specialist by Correspondence

Course Number: 36151.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/85–Present.

Objectives: Personnel is trained as cable splicing installation and maintenance specialists.

Instruction: This correspondence course provides instruction in cable splicing installation and maintenance. The course includes cable system fundamentals, cable splicing and sealing, cable systems maintenance, splice case installation and cable maintenance and hardened intersite cable system's pressure systems.

Credit Recommendation: In the vocational certificate category, 4 semester hours in communication systems (cable installation/maintenance) (11/86).

AF-1715-0127

Telephone Central Office Switching Equipment Specialist, Electronic/Electromechanical by Correspondence

Course Number: 36251.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/85–Present.

Objectives: Personnel is trained as telephone central office switching equipment specialists (electronic/electromechanical).

Instruction: This correspondence course provides instruction in the electronic/electromechanical telephone central office switching equipment. The course includes electronic principles, telephone fundamentals and manual telephone systems, specific telephone systems, and fundamentals of digital techniques to include digital logic and Boolean algebra, clock/pulse generators, sequential logic, combination logic and converters, and computers, peripherals and storage devices.

Credit Recommendation: In the vocational certificate category, 3 semester hours in communication systems (electromechanical telephone systems) (11/86); in the lower-division baccalaureate/associate degree category, 3 semester hours in the fundamentals of digital techniques (11/86).

AF-1715-0129

Weapons Fusing System Specialist

Course Number: ABR33130.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 43 weeks (1200 hours). *Version 2:* 41 weeks (1080 hours).

Exhibit Dates: *Version 1:* 3/60–12/68. *Version 2:* 3/59–2/60.

Objectives: To train enlisted personnel to perform as nuclear weapons fusing specialists.

Instruction: *All Versions:* Lectures and practical exercises in electronics fundamentals, including DC circuits, motors, and generators; series circuits, parallel circuits, and series-parallel combinations; magnetism; induction, inductive reactance, and capacitive reactance; vacuum tubes; diode, triode, tetrode, and pentode; various amplifier systems; oscillators; synchros and servomechanisms; bridge circuits, RLC combination circuits, counting and heterodyning circuits; and mathematics fundamentals. *Version 1:* Instruction includes transmission lines, microwave oscillators, transistor amplifiers and oscillators, FM principles, and semiconductor fundamentals.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0130

Missile Control Communications Systems Repairman by Correspondence

Course Number: 3625B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/76–Present.

Objectives: Personnel is trained as missile control communications systems repairman.

Instruction: This correspondence course provides instruction in missile control communications systems. The course includes electrical fundamentals, basic electronic circuits, fundumentals of missile control communications systems, specific missile communications systems, and maintenance, inspection, and testing management of missile control systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in communication systems (11/86).

AF-1715-0131

Telephone Equipment Installation and Repair Specialist by Correspondence

Course Number: 36254.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/81–Present.

Objectives: The student will be trained as a telephone equipment installation and repair specialist.

Instruction: This correspondence course provides instruction in telephone equipment installation and repair. The course includes basic electricity, electronic circuits, telephone construction and repair, substation installation, and key telephone systems.

Credit Recommendation: In the vocational certificate category, 3 semester hours in communication systems (11/86).

AF-1715-0132

Communications and Relay Center Equipment Repairman, Electromechanical

Course Number: *Version 1:* 3ABR36330. *Version 2:* 3ABR36330; ABR36330.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 31–33 weeks (930–990 hours). *Version 2:* 33–34 weeks (930 hours).

Exhibit Dates: *Version 1:* 5/71–12/73. *Version 2:* 6/66–4/71.

Objectives: To train enlisted personnel in communication and information relay center teletype unit troubleshooting, maintenance, and repair.

Instruction: *All Versions:* Lectures and practical experience in teletype unit troubleshooting, maintenance, and repair, including AC and DC circuit fundamentals, series-parallel and RLC circuits, and voltage regulators. *Version 1:* Instruction includes solid-state physics and devices, rectifiers and filters, principles of amplification, power amplifiers, oscillators and multivibrators, number systems, truth tables, Boolean equations, counters and resistors, and AC and DC motors and generators. *Version 2:* Instruction includes solid-state physics and devices, rectifiers and filters, principles of amplification, power amplifiers, oscillators and multivibrators, number systems, truth tables, Boolean equations, counters and resistors, and AC and DC motors and generators.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics(3/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and additional credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0133

Guided Missile Operations Officer (TM-76A)

Course Number: OBR1821-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 20 weeks (600 hours).

Exhibit Dates: 12/60–12/68.

Objectives: To train officers in guided missile operations.

Instruction: Lectures on air armament management; TM-76A weapons, propulsion, and flight control systems; missile preflight test pack; launch area operations; nuclear weapons orientation; principles of electronics; AC and DC fundamentals; and electronic power supplies.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0134

Maintenance Systems Analysis Specialists by Correspondence

Course Number: 39150.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/86–Present.

Objectives: The systems analyst is instructed in fundamentals of statistics and decision making. Course offers a discussion of procedure regarding security.

Instruction: safety, fundamentals of maintenance management, written and oral presentation, basic statistical mathematics, distribution, variability, probability, statistical decision processes coefficient of correlation, data automation and retrieval systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in elementary statistics (11/86).

AF-1715-0135

Maintenance Scheduling Specialists by Correspondence

Course Number: 39250.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/84–Present.

Objectives: Personnel is trained as maintenance scheduling specialists.

Instruction: This correspondence course provides instruction in maintenance scheduling and management including scheduling fundamentals, production control, records processing, maintenance documentation, multiple parts tracking, and operational and daily planning.

Credit Recommendation: In the vocational certificate category, 2 semester hours in management (11/86).

AF-1715-0136

Precision Imagery and Audiovisual Media Maintenance Specialist by Correspondence

Course Number: 40450.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/85–Present.

Objectives: To provide training in precision imagery and audiovisual media maintenance.

Instruction: This correspondence course provides instruction in precision imagery and audiovisual media maintenance. The course include electronics fundamentals, advanced electronics and test equipment, maintenance of photographic equipment, maintenance of processors, quality control equipment, and relocatable laboratories, audiovisual production systems, and the fundamentals of digital techniques to include digital logic of Boolean algebra, clock/pulse generators, and sequential logic. It also include semiconductors and devices, and waveform measurement using an oscilloscope.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in the fundamentals of digital techniques, 2 in basic electricity/electronics, and 3 in photography (11/86).

AF-1715-0137

MISSILE GUIDANCE AND CONTROL SPECIALIST (LGM-25)

Course Number: 3ABR31631F; ABR31631F.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 29 weeks (840 hours).

Exhibit Dates: 11/66–8/71.

Objectives: To train enlisted personnel to perform as missile guidance and control specialists.

Instruction: Lectures and practical exercises in AC and DC circuits fundamentals; solid-state devices, including transistors, amplifiers, and power supplies; vacuum tubes, including amplifier principles, voltage regulators, tools, and soldering techniques; signal generation, timing, and control; logic symbols, circuits, and applications; and digital techniques and computer hardware.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity, and additional credit in electronics laboratory on the basis of institutional evaluation (3/74).

AF-1715-0138

DEFENSIVE SYSTEMS TRAINER SPECIALIST, AN/GPQ-T6

Course Number: 3ABR34231A; ABR34231A.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 42–46 weeks (1110–1200 hours).

Exhibit Dates: 11/66–12/73.

Objectives: To provide enlisted personnel with training in basic electronics.

Instruction: Lectures and laboratory in AC and DC circuits, solid-state devices, vacuum tubes, oscillators, transmitter and receiver fundamentals, microwave principles, and electrical motors and servomechanisms.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in electricity or electronics, and additional credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0139

AEROSPACE PHOTOGRAPHIC SYSTEMS SPECIALIST BY CORRESPONDENCE

Course Number: 40451.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/84–Present.

Objectives: The student will be to train personnel as aerospace photographic systems specialists.

Instruction: This correspondence course provides instruction in aerospace photographic systems. The course includes electronic fundamentals, advanced electronics and test equipment, photographic principles, aerospace photographic systems repair, airborne video systems and related equipment, and the fundamentals of digital techniques to include digital logic and Boolean algebra, clocks/pulse generators, and sequential logic. It also include corrosion control, semiconductor and devices, and warfare measurement using an oscilloscope.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in the fundamentals of digital techniques, 2 in basic electricity/electronics, and 3 in photography (11/86).

AF-1715-0149

WEAPONS FUSING SYSTEMS SPECIALIST (ELECTRONIC)

Course Number: AB33130-A; AB33130-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26–30 weeks (750–810 hours).

Exhibit Dates: 11/55–12/68.

Objectives: To train enlisted personnel to inspect, assemble, test, maintain, and repair nuclear weapons fusing systems, components, and related test equipment.

Instruction: Lectures in applied mathematics, including monomials, binomials, linear equations, power-of-ten notation, addition, subtraction, and multiplication of fractions, and use of slide rule; electricity fundamentals, including resistors, AC, DC, and bridge circuits; series, parallel, and series-parallel combination circuits; series-parallel RLC circuits, resonance, and Q factor; AC circuits fundamentals, including frequency, amplitude, and phase; DC motors and generators; inductive and capacitive reactance; magnetism; color code; volt-ohm-ampere meters; transformer fundamentals; maximum power transfer; vacuum tube devices; diodes, triodes, tetrodes, and pentodes; rectifiers and filters; basic concepts of tube amplification; gas-filled tubes and voltage regulators; oscillators and blocking circuits; amplitude modulation and AM detection circuits; frequency modulation, discriminators, and power amplifiers; magnetic amplifiers; RC and RL transient circuits; multivibrators, counters and limiters; transmission line concepts; magnetron and klystron microwave oscillators, waveguides, antennas, and pulse modulation; receiver circuits and heterodyne; practical experience in fusing system components and associated test equipment preventive maintenance; checking, calibration, and installation of electrical components; use of radar test equipment; and transformer, servomechanisms, vacuum tubes, and tube amplifiers operation, maintenance, and repair.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and additional credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0150

SPECIAL WEAPONS MAINTENANCE TECHNICIAN

Course Number: AB99025A.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 25 weeks (660 hours).

Exhibit Dates: 8/57–12/68.

Objectives: To train enlisted personnel to operate, inspect, maintain, and correct malfunctions on special electronic instruments.

Instruction: Lectures and practical exercises in electrical fundamentals, including AC and DC circuits, resonance, RLC time constant circuits, vacuum and special-purpose tubes, amplifiers and oscillators, and oscilloscopes operation and use; nuclear physics fundamentals; and operation and use of elementary electronic counters.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0151

SPECIAL WEAPONS MAINTENANCE TECHNICIAN

Course Number: *Version 1:* ABR99125FL. *Version 2:* AB99025FL.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 31 weeks (840 hours). *Version 2:* 14 weeks (390 hours).

Exhibit Dates: *Version 1:* 5/59–12/68. *Version 2:* 8/57–4/59.

Objectives: To train enlisted personnel to operate and maintain special electronic instruments.

Instruction: *All Versions:* Lectures and practical exercises in electronic fundamentals, AC and DC circuits; RLC circuits; resonance; filter circuits; Universal Time Constant curve use; time constants; vacuum tubes; diodes, triodes, tetrodes, and pentodes; transistor fundamentals; amplifier principles; and oscilloscope operation and use. *Version 1:* Instruction includes audio, DC, pulse, tuned, push-pull, and negative feedback amplifiers; oscillators, multivibrators, and pulse-generating circuits; and basic concepts communications systems and electromagnetic waves. *Version 2:* Instruction includes basic concepts of nuclear physics and atomic energy, and allied electronic detecting and measuring apparatus.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in electrical laboratory or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in atomic physics, 2 in electricity or electronics, and, on the basis of institutional evaluation, credit in electrical laboratory (3/74).

AF-1715-0152

SPECIAL WEAPONS MAINTENANCE TECHNICIAN

Course Number: ABR99125Q.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 39 weeks (1080 hours).

Exhibit Dates: 3/61–12/68.

Objectives: To train airmen to inspect, test, and repair electronic circuits and maintain special weapons systems.

Instruction: Lectures and practical exercises in special weapons systems maintenance and electrical fundamentals, including

AC and DC circuits; RL, RC, and RLC circuits including resonance and filters; basic meter movements; oscilloscope use and operation; vacuum and gas tube theory; amplifiers, including DC, audio, pulse, tuned, and push-pull; oscillator principles; semiconductor theory; equivalent circuits; and systems analysis.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0162

Tactical Missile Control Mechanic
(TM-76A/B)
(Control Systems Mechanic (TM-76A/B))

Course Number: ABR31432; ABR31230G.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26-30 weeks (690-810 hours).

Exhibit Dates: 6/61-12/68.

Objectives: To train enlisted personnel to be ballistic missile system mechanics.

Instruction: Lectures and practical exercises in electronic principles, circuit theory, and testing; gyro principles; technical publications; flight control systems theory, operation, check-out, and troubleshooting; and operation, use, and inspection of control system test consoles and ground support equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics (3/74).

AF-1715-0163

Nuclear Measurement Technician

Course Number: AB33231.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 23-26 weeks (660-690 hours).

Exhibit Dates: 4/55-12/68.

Objectives: To train enlisted personnel to operate, analyze, maintain, and inspect special laboratory instruments used in nuclear technology.

Instruction: Lectures and laboratory in basic electronics, including AC and DC circuits, magnetism, vacuum tubes, amplifiers, oscillators, transient analysis and wave shaping, multivibrators and pulse circuits, semiconductors introduction, and oscilloscopes; mathematics, including simultaneous linear equations, logs, and radicals; nuclear physics, including wave motion, atomic structure, periodic tables, mass-energy, binding energy curve, nuclear forces, electromagnetic radiation, alpha, beta, and gamma radiation, decay, emission, and absorption, isotopes chart and unknown isotopes determination; neutrons and neutron reactions, including fission, binding energy, critical energy, chain reactions, A-bomb, nuclear reactor, critical mass, decay curves of radioactive isotopes; ionization of gases; electroscope type instruments, including ion chambers, pulse amplifiers, proportional, geiger-mueller, flow, wrap-around, and scintillation counters; photodosimetry; explosion phenomena and burst characteristics; protection, shielding, decontamination, and medical safety; and technical procedures, including error reduction and error counting, plateau plotting and resolving time, and scaling circuits and devices.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electrical laboratory (3/74).

AF-1715-0164

Electrical Engineering

Course Number: None.

Location: Air Force Institute of Technology, Wright-Patterson AFB, OH.

Length: 4 weeks (240 hours).

Exhibit Dates: 4/73-6/74.

Objectives: To provide electrical engineers with advanced training in electrical power systems design.

Instruction: Lectures in one- and three-phase circuits; power-factor corrections, voltage regulations; load flow, fault calculations, and grounding methods; various fuses, circuit breakers, and relays; transformer characteristics; lighting methods; operation and applications of various AC and DC motors; systems design; utility management and planning; and national electric code regulations and practices.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronics (3/74); in the upper-division baccalaureate category, 3 semester hours in electronics (3/74).

AF-1715-0166

Missile Electronic Equipment
Specialist (LGM-25)

Course Number: *All Versions:* 3ABR31632F. *Version 2:* ABR31632F.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 31-33 weeks (930-966 hours). *Version 2:* 36 weeks (990 hours).

Exhibit Dates: *Version 1:* 7/72-12/73. *Version 2:* 10/66-6/72.

Objectives: To train enlisted personnel to perform duties as missile electronic equipment specialists.

Instruction: Lectures and laboratories in basic electricity, including AC and DC circuits, motors, and synchro mechanics; solid-state amplifiers and power supplies; soldering and test equipment; solid-state application in wave generation; digital techniques; weapon system familiarization; launch complex systems and equipment; missile electrical system; and systems maintenance.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electronics and electronics laboratory (3/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0167

Nuclear Technician

Course Number: AB33230.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 22-27 weeks (690-840 hours).

Exhibit Dates: 11/55-12/68.

Objectives: To train enlisted personnel to perform as nuclear technicians.

Instruction: Lectures and laboratories in AC and DC fundamentals; vacuum tubes and power supplies; amplifiers and oscillators; ionization detectors and scalers; servomechanisms, test equipment, and electronic construction techniques; bomb physics; radiation detection and radiological safety and salvage; nuclear components; and nuclear laboratory and laboratory instrument usage. No instruction in transistors.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0168

Advanced Electrical-Electronics
Measurements

Course Number: 3AZR32470-5.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 6 weeks (180 hours).

Exhibit Dates: 10/67-12/73.

Objectives: To train Air Force, Navy, and Marine Corps personnel as advanced precision measuring equipment specialists.

Instruction: Lectures and laboratories in principles of meterology; operation, application, and mathematical analysis of measurement methods, and calibration of electrical-electronic standards and measuring equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0169

1. Atomic Energy, Phase I
(Electrical)
2. Atomic Energy, Phase I

Course Number: *Version 1:* AB33130A. *Version 2:* AB33130.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 12 weeks (360 hours). *Version 2:* 18 weeks (540 hours).

Exhibit Dates: *Version 1:* 11/54-12/68. *Version 2:* 9/54-10/54.

Objectives: To provide enlisted personnel with training in electrical fundamentals.

Instruction: *All Versions:* Lectures and laboratories in analysis of electrical and electronic circuits, including DC and AC circuits, magnetism, vacuum tubes, power supplies, voltage regulators, amplifiers, oscillators, and modulation and demodulation. Emphasis is on testing and operating. *Version 2:* Includes receivers, special circuits, transmission lines, microwave energy, synchros, and radar fundamentals.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in basic electronics (3/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in electricity or electronics (3/74).

AF-1715-0174

1. Electronic Communications and
Cryptographic Equipment
Systems Repairman
2. Electronic Communications and
Cryptographic Equipment
Systems Repairman
3. Electronic Communications and
Cryptographic Equipment
Systems Repairman
4. Electronic Communications and
Cryptographic Systems
Equipment Repairman (Ciphony)
(Encrypted Tel-Data Fax)

Course Number: *Version 1:* 3ABR30630. *Version 2:* 3ABR30630. *Version 3:* ABR30630. *Version 4:* ABR30630B; ABR30630C.

Location: 3275th Technical School, Lackland AFB, TX.

Length: *Version 1:* 38 weeks (1113 hours). *Version 2:* 40 weeks (1197 hours). *Version 3:* 20 weeks (600 hours). *Version 4:* 35-41 weeks (300-360 hours).

Exhibit Dates: *Version 1:* 3/72-12/73. *Version 2:* 1/71-2/72. *Version 3:* 11/65-12/70. *Version 4:* 2/62-10/65.

Objectives: To train enlisted personnel to install, operate, maintain, and repair cryptographic equipment.

Instruction: Lectures and practical exercises in basic electronics; series, parallel, series-parallel resistive circuits; reactive, inductive, and capacitive circuits; vacuum tubes and solid-state devices principles; coupling and logic circuits; power supplies; oscillators; pulse and multiplex systems; and specialized training in various specific cryptographic equipment maintenance and repair.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours as an elective in electricity or electronics for non-engineering majors (3/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 4:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0180

Controls System Analyst (TM-76A)

Course Number: ABR31431G.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 19 weeks (540 hours).

Exhibit Dates: 12/59-12/68.

Objectives: To train airmen to perform as apprentice controls systems analysts.

Instruction: Lectures and practical exercises in elementary control systems analysis, including electronic fundamentals (power supplies, amplifiers, linear systems, microwaves, vacuum tubes, antennas), guided missile fundamentals, flight controls and command guidance theory and check-out test sets, and basic missile checker components and operation.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electronic systems (3/74).

AF-1715-0181

Advanced Microwave Measurement and Calibration

Course Number: 3AZR32470-12.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO.

Length: 6 weeks (240 hours).

Exhibit Dates: 5/73-12/73.

Objectives: To train enlisted personnel to maintain and calibrate advanced microwave measurement equipment.

Instruction: Lectures and practical exercises in the maintenance of advanced microwave measuring equipment, including principles of meteorology; application and mathematical analysis of measurement methods; calibration techniques of microwave measuring, calibration standards, and measurement theory and instrumentation as applied to transmission lines and waveguides; microwave tubes; noise; microwave power; impedance and VSWR.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in microwave measurement (3/74).

AF-1715-0198

Specialized Communications and Electronics (C & E) Training

Course Number: ATS30472-3.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 16 weeks (480 hours).

Exhibit Dates: 4/62-12/68.

Objectives: To train enlisted personnel to operate, maintain, and repair specific electronic equipment.

Instruction: Lectures and practical exercises in electronics principles; AC and DC circuits; transmitters and receivers; transistors and their applications; and television, telephone systems, and direction-finding equipment operation, maintenance, and repair.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in electricity or electronics (3/74).

AF-1715-0201

Fire Control Systems Mechanic (E-9 Series)

Course Number: AB32230E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 42 weeks (1170 hours).

Exhibit Dates: 7/56-12/68.

Objectives: To train enlisted personnel to maintain and repair the E-9 fire control system.

Instruction: Lectures and practical exercises in the maintenance of the E-9 fire control system, including malfunction analysis, component familiarization, alignment and adjustments, electricity and electronics fundamentals, and analysis of special circuits. Electronics not presented in depth.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0203

F-111 Computer/Programmer Test Stations Technician

Course Number: ALR30174.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 25-28 weeks (750-840 hours).

Exhibit Dates: 6/66-12/68.

Objectives: To train enlisted personnel to operate, test, and maintain computer test station equipment.

Instruction: Lectures and practical exercises in computer test station equipment operation, testing and maintenance, including circuit analysis of systems; computer mathematics, logic, and circuits; navigation, flight control, and optical system gyro and accelerometer systems; and automatic test equipment operation and maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in computer electronics, and additional credit in computer electronics on the basis of institutional evaluation (3/74).

AF-1715-0204

Fire Control Systems Mechanic (AN/ASG-14 System)

Course Number: AB32230M.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26 weeks (690 hours).

Exhibit Dates: 2/58-5/59.

Objectives: To train enlisted personnel to maintain, repair, and isolate malfunctions in the AN/ASG-14 fire control system.

Instruction: Lectures and practical exercises in AN/ASG-14 maintenance and repair, including electricity symbols, units, and meters; AC and DC circuit fundamentals; oscilloscopes; series-parallel and RLC circuits; vacuum and gas-filled tubes; multigrid devices; rectifiers, filters, and regulators; amplifiers, oscillators, sweep generators, and multivibrators; transistors and specialized circuits; radar and RF transmission principles; MA-10 radar unit transmitter, receiver, and electronic countermeasures, optical and infrared operation; and field exercises in aircraft.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0208

Wideband Communications Equipment Specialist by Correspondence

Course Number: 30450.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/82-Present.

Objectives: To upgrade the technical skill level of communications technicians in analog and digital data communications and in wideband radio transmission methods and equipment maintenance.

Instruction: The course provides an introduction to analog and digital signals and systems for data communications, continuous and sampled-data waveform characteristics, modulation and multiplexing methods with hardware implementations, including theory and practice. Microwave principles, propagation, wideband communications, systems including noise, and performance measurement are included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to communications systems (3/85). Proctored examination concludes course.

AF-1715-0210

Integrated Avionics System Specialist (Inertial/Bomb Navigation, Fire/Weapon Control, Digital Computers, Airborne Photographic Systems, and Multi-Sensor Displays)

(Integrated Avionics System Specialist (Inertial/Bomb Navigation, Fire/Weapon Control, Digital Computers, Airborne Displays))

Course Number: 3ABR32632A.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO.

Length: 18 weeks (540 hours).

Exhibit Dates: 3/72-12/73.

Objectives: To train enlisted personnel as integrated avionic systems specialists.

Instruction: Lectures and laboratories in electronic principles, including schematic symbols, resistance, ohmmeter, Ohm's law, power law, series-parallel circuits, generation of AC, oscilloscope operation, electromagnetism and relays, reactance and reactive circuits, DC and AC motors, semiconductor theory, diodes, transistors, rectifier circuits, filters, power supplies, Zener diodes, basic amplifiers, video amplifiers, servo control systems, oscillators, limiters, clampers, multivibrators, Schmitt triggers, digital mathematics, logic circuits, and Boolean algebra; and operations and maintenance of navigation sets, optical display sight sets, control display sets, digital computer complex, attack radar systems, terrain-following radar, and navigational radar sets.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0212

1. BOMB NAVIGATION SYSTEMS TECHNICIAN (MA-6A, 7A RADAR AND ICE)
   (Bomb Navigation Systems Technician (MA-6A, MA-7A Radar and Interconnect))
2. BOMB NAVIGATION SYSTEMS TECHNICIAN (K, MA-6A, MA-7A RADAR AND INTERCONNECT)
   (Bomb Navigation Systems Technician (K, MA-6A, MA-7A Series Radar Interconnects))
3. K-SERIES RADAR AND INTERCONNECTION EQUIPMENT TECHNICIAN

Course Number: *Version 1:* AAR32170C. *Version 2:* AAR32170C; AA32170C. *Version 3:* AA32171EC.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 32 weeks (960 hours). *Version 2:* 27 weeks (810 hours). *Version 3:* 26 weeks (780 hours).

Exhibit Dates: *Version 1:* 7/60–12/68. *Version 2:* 4/57–7/60. *Version 3:* 1/55–3/57.

Objectives: To train enlisted personnel to maintain radar and interconnection equipment.

Instruction: *Version 1:* Lectures and laboratories in DC and AC circuits, with introduction to transformers and machines; vacuum tubes, including rectifiers, HF amplifiers, regulators, doublers, cathode followers, clamping circuits, sweep generators, oscillators, and multivibrators; receiver principles; microwave (radar) principles; oscilloscope construction and use; radar and interconnect (ICE) data flow, circuit tracing, and power supplies and distribution; APS-64 transmitter, receiver, video, sweep, range, and azimuth channels; and maintenance procedures. *Version 2:* Lectures and laboratories in system data flow; radar and interconnection equipment circuit analysis; basic AC and DC circuit analysis; vacuum tubes, including rectifiers, regulators, doublers, amplifiers, clamping circuits, oscillators, sweep generators, and multivibrators; principles of radar; radar and interconnect (ICE) data flow, circuit tracing, and power supplies and distribution; APS-64 transmitter, receiver, video, sweep, and azimuth channels; and maintenance procedures. *Version 3:* Lectures and laboratories in DC and AC circuits, with introduction to transformers and machines; vacuum tubes, including rectifiers, HF amplifiers, regulators, doublers, cathode followers, clamping circuits, sweep generators, oscillators, and multivibrators; receiver principles; microwave (radar) principles; oscilloscope construction and use; radar and interconnect (ICE) data flow, circuit tracing, and power supplies and distribution; APS-64 transmitter, receiver, video, sweep, range, and azimuth channels; and maintenance procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0216

GUNNERY TRAINER SPECIALIST

Course Number: ABR34430-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 26 weeks (750 hours).

Exhibit Dates: 6/67–12/68.

Objectives: To train enlisted personnel to operate and maintain specific radar equipment.

Instruction: Lectures and practical exercises in AN/APG-T1A radar equipment operation and maintenance, including electronic principles, radar principles, and operation and maintenance of specific radar sets. Instruction includes development of target position voltages; development of target and interference; relay section and scoring devices operation and maintenance; and OA-474 simulator group maintenance, alignment, and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0225

BOMB NAVIGATION SYSTEMS TECHNICIAN (MA-6A, MA-7A COMPUTER)
(Bomb Navigation Systems Technician (MA-6A and MA-7A Computer and Stab and Optics))
(Bomb Navigation Systems Technician (K, MA-6A, MA-7A Computer))
(Bomb Navigation Systems Technician (K-Series Computer))
(K-Series Computer Technician)

Course Number: AA32170ED; AA32171ED.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 21–32 weeks (720–960 hours).

Exhibit Dates: 4/55–12/68.

Objectives: To train enlisted personnel to operate, maintain, and repair specific bomb navigation computers and stabilization and optics units.

Instruction: Lectures and practical exercises in AC and DC circuits, tube and amplifier principles, technical publications, bomb navigation data flow, stabilization system servo loops, synchros and gyros, tracking computer maintenance, polar converter maintenance, bomb release computer, navigation control, ballistic control, optical systems, alignment, maintenance, bench checks, and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0227

GROUND RADIO COMMUNICATIONS SPECIALIST BY CORRESPONDENCE

Course Number: 30454.

Location: Entension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/81–Present.

Objectives: To upgrade the technical skills of communications technicians in electronic devices and circuits, antennas, communications systems, and maintenance techniques.

Instruction: This program provides an introduction to electronics fundamentals, devices, and circuits for both linear and digital applications including electronic measurements. Also covered are a description of communications circuits, modulation and demodulation methods, and radio transmission systems. The course also includes mobile radio communications, AM, FM, SSB, antenna theory, and propagation. Final proctored examination is required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to communications systems (3/85).

AF-1715-0230

1. GROUND COMMUNICATIONS EQUIPMENT TECHNICIAN (LIGHT)
   (Ground Communications Equipment Maintenance Technician (Light))
2. GROUND COMMUNICATIONS EQUIPMENT MAINTENANCE TECHNICIAL (LIGHT)

Course Number: AAR30472.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 31 weeks (940 hours). *Version 2:* 34 weeks (1020 hours).

Exhibit Dates: *Version 1:* 4/60–12/68. *Version 2:* 8/59–3/60.

Objectives: To train enlisted personnel to operate, maintain, and install low-powered ground communication equipment.

Instruction: Lectures and practical exercises in the installation, operation, and maintenance of low-powered ground communication equipment, including basic AC and DC circuits, electronic principles, advanced maintenance principles, HF and radioteletype systems, UHF communications systems, TV systems, data processing principles, and descriptive analysis of communication principles. Coverage of communication component and signal-processing blocks is more descriptive than analytical.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in shop management (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management (4/74).

AF-1715-0239

GROUND COMMUNICATIONS EQUIPMENT MAINTENANCE TECHNICIAN (HEAVY)

Course Number: AAR30473.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 31–42 weeks (930–1260 hours).

Exhibit Dates: 7/59–12/68.

Objectives: To provide enlisted personnel with advanced training in heavy radio communications equipment operation and maintenance.

Instruction: Lectures and practical exercises in radio communications equipment operation and maintenance, including basic electronic principles and concepts, electronic communications problem solving, publications, advanced equipment maintenance, diversity systems, scatter communications, shop practices, advanced electronic circuits, test equipment operation and maintenance, radio teletype equipment, systems repair, shop management, and SSB, receiving, and heavy transmitting equipment testing and repair.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (3/74).

AF-1715-0253

Flight Facilities Equipment Repairman (Ranges and Beacons)

Course Number: AB30431A.

Location: 3310th Technical School, Scott AFB, IL.

Length: 16-17 weeks (480 hours).

Exhibit Dates: 7/55-2/58.

Objectives: To train enlisted personnel to operate and maintain specific radio equipment.

Instruction: Lectures and practical exercises in basic electronics, including AC and DC circuits, vacuum tubes, electronic circuits, radio systems principles, and specific radio equipment components, operation, and maintenance techniques.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity and electronics for non-electronics majors (6/74).

AF-1715-0256

Bomb Navigation System Mechanic (MA-6A, MA-7A Systems) Televised

Course Number: ABR32130E (TV).

Location: 3415th Technical School, Lowry AFB, CO.

Length: 27 weeks (720 hours).

Exhibit Dates: 12/59-12/68.

Objectives: To train enlisted personnel to be bomb navigation system mechanics.

Instruction: Televised lectures and practical exercises in MA-6A and MA-7A bomb navigation systems mechanics, including AC and DC circuit principles, vacuum tubes and amplification, radar and servo systems, system radar and ICE theory and operational adjustments, after-installation checks and adjustments, and malfunction analysis.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in industrial technology (3/74).

AF-1715-0258

Fire Control Systems Mechanic, MG-10 Radar

Course Number: AB32230G.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 55 weeks (1650 hours).

Exhibit Dates: 7/56-12/68.

Objectives: To train enlisted personnel to analyze and maintain MG-10 fire control systems.

Instruction: Lectures and practical exercises in MG-10 fire control systems maintenance and repair, including electrical theory, basic electronics, block-diagram analysis, signal flow, automatic flight control and data link, power generation and distribution, maintenance procedures, and field exercises.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in industrial technology for non-engineering majors (4/74).

AF-1715-0260

Communications-Electronics Engineer

Course Number: 3OBR3051-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 26 weeks (768 hours).

Exhibit Dates: 3/71-12/73.

Objectives: To train officers to perform as communications-electronics engineers.

Instruction: Lectures and practical exercises in communications-electronics systems, including the development and management of test and evaluation programs; C-E systems survivability and serviceability; the inspection, survey, and engineering of complex C-E systems and facilities; communications of electronics career field; communications of electronics management; planning and programming; management analysis; and engineering principles.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in industrial technology, or as a technical elective in engineering (3/74).

AF-1715-0261

F-111 Radar and Control Test Stations Technician

Course Number: ALR32271.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26-27 weeks (780-810 hours).

Exhibit Dates: 6/66-12/68.

Objectives: To train enlisted personnel to analyze, troubleshoot, and repair specific radar and test equipment.

Instruction: Lectures and practical exercises in radar test equipment analysis, troubleshooting, and repair, including terrain-following radar and attack radar systems, video test station maintenance, digital logic circuitry, and intensive study of radar block-diagram analysis and signal flow.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory for non-electronics majors (3/74).

AF-1715-0266

Electronic Digital Data Processing Equipment Maintenance Technician (AN/FSQ-7 Systems Technician)

Course Number: ATS30571-34.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 15 weeks (600 hours).

Exhibit Dates: 7/62-12/68.

Objectives: To train selected AN/FSQ-7 maintenance specialists for duty as systems technicians.

Instruction: Lectures and practical exercises in the principles and applications of the AN/FSQ-7 computer, including the memory and control devices, line printer, card reader, card recorder, tape system, and other input-output devices.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in data processing—computer operation (12/68).

AF-1715-0267

Bomb Navigation Systems Mechanic (MA-6A and MA-7A Systems)

Course Number: ABR32130E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 24-37 weeks (720-1028 hours).

Exhibit Dates: 10/58-12/68.

Objectives: To train enlisted personnel to be apprentice bomb navigation system mechanics.

Instruction: Lectures and practical exercises in AC and DC circuits, RLC circuits, reactance, impedance, vacuum tubes and solid-state devices, amplifiers, oscillators, radar circuit analysis, microwave operation, multivibrators, sweep and logic circuits, mathematics (below calculus level), and bomb navigation system maintenance.

Credit Recommendation: and credit in electrical laboratory on the basis of institutional evaluation (3/74). In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0268

Bomb Navigation Systems Mechanic (K-5 Series)

Course Number: AB32130J.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 37 weeks (1020 hours).

Exhibit Dates: 4/56-12/68.

Objectives: To train enlisted personnel to operate, align, adjust, and maintain K-5 bomb navigation systems and test equipment.

Instruction: Lectures and practical experience in K-5 bomb navigation systems alignment, adjustment, operation, and maintenance, including AC and DC circuit fundamentals, vacuum tubes and power supply circuits, amplifier and oscillator principles, servo systems, radar transmitting and receiving, computer tracking and sighting, mathematics (below calculus level), optics, and organizational maintenance and associated equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0272

Weapons Control Systems Mechanic (MG-3, MG-10, MG-13 Computer Controls)

Course Number: ABR32231H.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 50 weeks (1482 hours).

Exhibit Dates: 1/58-12/68.

Objectives: To train enlisted personnel to operate and maintain MG-3, MG-10, and MG-13 weapons control systems.

Instruction: Lectures and practical exercises in MG-3, MG-10, and MG-13 weapons control systems maintenance and operation, including AC and DC circuit fundamentals, vacuum tubes, electronic circuits, power supplies, oscillators, sweep generators, radar principles, servomechanisms, and special devices associated with weapons control systems computer controls.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0274

Navigation and Bombing Trainer Specialist (AN/APQ-T3)

Course Number: AB34330B.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 29 weeks (840 hours).

Exhibit Dates: 4/56-12/68.

Objectives: To train enlisted personnel to install, operate, maintain, and repair navigation and bombing trainers and associated electronic test equipment.

Instruction: Lectures and laboratories in DC and AC circuit analysis, vacuum tube principles, amplifiers and oscillators, radar circuitry, and preventive maintenance and operation of navigation and bombing trainers.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics, and 1 in electronics laboratory for non-electrical engineering majors (3/74).

AF-1715-0276

Sonar AN/SQS-53 Maintenance

Course Number: K-130-0102.

Location: Fleet Antisubmarine Training Center, Pacific, San Diego, CA.

Length: 34 weeks (1356 hours).

Exhibit Dates: 1/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, troubleshoot and repair Sonar AN/SQS-53 system.

Instruction: Lectures and practical exercises in the operation and maintenance of the AN/SQS-26CX and, beginning February 1977, the AN/SQS-53 sonar detecting-ranging set, including binary mathematics and logic, test equipment, modes of operation, sound propagation, primary power distribution, sonar monitor, block diagrams, fault-locating monitor, mode selection and generation, simulated targets and target control, surface duct programmer and transmitter, B-scan receiver and display, various circuits, variable depression components, range measuring and servos.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in electronics system troubleshooting (7/87).

AF-1715-0282

Aircraft Early Warning Radar
Maintenance Technician

Course Number: AAR30172.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 38 weeks (1140 hours).

Exhibit Dates: 9/59–12/68.

Objectives: To train enlisted personnel to maintain aircraft early warning radar equipment.

Instruction: Lectures and practical exercises in aircraft early warning radar equipment maintenance, including use of algebra and trigonometry for solving mathematics problems related to electronic circuits; circuit analysis of AC and DC circuits, transformers, switches, relays, motors, transmission lines, wave-guides, special-purpose tubes, and test equipment; and functional circuit analysis of power supplies, amplifiers, wave-shaping circuits, oscillators, servos, and modulators. Emphasis is on operation of specific equipment receivers, transmitters, indicators, antennas, and related test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (4/74).

AF-1715-0290

Officers Phase I, Atomic Energy

Course Number: OB3200.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 23 weeks (690 hours).

Exhibit Dates: 10/54–12/68.

Objectives: To train officers in the fundamental principles of electronics.

Instruction: Lectures and practical exercises in electronics, including theory and principles of direct and alternating currents, vacuum tubes; vacuum tube amplifier and oscillator circuits; receiver, transmitter, and special electronic circuits; microwave energy; and application of fundamental electronic principles to radar equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0291

1. Aerospace Photographic Systems Repairman
2. Aerospace Photographic Systems Repairman
   (Photographic Repairman)
3. Photographic Repairman

Course Number: *Version 1:* 3ABR40230. *All Versions:* ABR40230. *Version 3:* AB40230.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 20–22 weeks (600–640 hours). *Version 2:* 26–35 weeks (750–960 hours). *Version 3:* 30–33 weeks (810–900 hours).

Exhibit Dates: *Version 1:* 4/67–12/73. *Version 2:* 5/64–3/67. *Version 3:* 3/58–4/64.

Objectives: To train airmen to repair aerospace photographic systems or to maintain and install photographic equipment, including electronic photographic equipment control devices.

Instruction: *All Versions:* Lectures and practical exercises in the repair of aerospace photographic systems or the maintenance and installation of photographic equipment, including electronic photographic equipment control devices, analysis of electrical and electronic circuits, photographic equipment systems, basic electronics principles, reconnaissance aerospace electronics photographic systems and control systems, and ground support photographic equipment. *Version 1:* Includes operation and components of RF-4C aerospace infrared detection and data display system. *Version 2:* Includes operation and components of RF-4C aerospace infrared detection and data display system, and additional instruction on electronic circuits and test equipment. *Version 3:* Includes motion picture projectors, IMC equipment operation and principles, gun, strike, and MP cameras and equipment, and automatic printers and processors.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electrical laboratory, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0292

Control Systems Mechanic (TM-61C)

Course Number: ABR31230H.

Location: 3415th Technical Training Wing, Lowry AFB, CO.

Length: 19–22 weeks (540–570 hours).

Exhibit Dates: 9/58–12/68.

Objectives: To train airmen to perform as control systems mechanics on TM-61C series missiles.

Instruction: Lectures and practical exercises in the functions of control systems mechanics on TM-61C series missiles, including AC and DC circuit analysis, relays, switching devices, oscilloscopes, amplifiers, vacuum tubes, specific weapon systems; fuel, hydraulic, and electrical systems; guided missile control system fundamentals; and block diagrams, signal flow, and test procedures for specific equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0293

Controls Systems Mechanic

Course Number: ABR31230.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26 weeks (690 hours).

Exhibit Dates: 10/58–12/68.

Objectives: To train airmen to perform as missile control system mechanics.

Instruction: Lectures and practical exercises in the duties of missile control systems mechanics, including basic electricity, physics, and aerodynamics; propulsion, launching, and navigation and guidance systems; vacuum tubes, amplification, and wave shaping; oscilloscope construction, synchros and servomechanisms, control system and gyros, pneumatic-electric system, hydraulic-electric system, computer and amplifier functions, actuating units, and specific missile equipment orientation.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0299

Ballistic Missile Check-Out
Equipment Specialist, WS-133A
(Ballistic Missile Check-Out Equipment Specialist, SM-80)

Course Number: ABR31235G.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 35–43 weeks (960–1200 hours).

Exhibit Dates: 7/62–12/68.

Objectives: To train enlisted personnel to be ballistic missile check-out equipment specialists.

Instruction: Lectures and practical exercises in electronic fundamentals, amplifiers, oscillators, power supplies, digital logic, oscilloscopes, communications and launch control console, photoelectronic collimator and guidance and control coupler test sets, electronic programming test center operation and maintenance, aerospace ground equipment, and integrated fault isolation and calibration.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0307

Electrician/Supervisor (SM-68)

Course Number: ATS56150-4.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 13 weeks (390 hours).

Exhibit Dates: 5/61–12/68.

Objectives: To train airmen to perform as electricians/supervisors in WS107A-2 ballistic missile installations.

Instruction: Lectures and practical exercises in the duties of electricians/supervisors in WS107A-2 ballistic missile installations, including electronic circuit analysis, troubleshooting, maintenance, repair and operation of various power supplies, computer motor-generator, guidance motor-generator, facilities sensors, detectors and amplifiers, launcher and electrical systems, hydraulic system, and power distribution, and electrical and electronic test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0308

Defense Missile Guidance Mechanic, IM-99B

Course Number: ABR31131K.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 35 weeks (960 hours).

Exhibit Dates: 8/61–12/68.

Objectives: To train enlisted personnel to test and maintain the IM-99B missile guidance system.

Instruction: Lectures and practical exercises in the testing and maintenance of the IM-99B missile guidance system, including AC and DC principles, vacuum tubes, transistors, amplifiers, motors, servomechanisms, microwave principles, oscilloscopes, magnetism, guidance transponder, fuse and target seeker systems, and operation of the command system and specific equipment.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0312

Electrician/Supervisor (SM-65F)

Course Number: ATS54270D-1; ATS56150-9.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 13 weeks (390 hours).

Exhibit Dates: 5/61–12/68.

Objectives: To train enlisted personnel to perform as electricians and supervisors for electrical conversion, transmission, and distribution components of the SM-65F ballistic missile and associated ground support equipment.

Instruction: Lectures and practical exercises in electrical conversion, transmission, and distribution components of the SM-65F ballistic missile and associated ground support equipment, including AC and DC circuit analysis; transistors, transformers, and motor controllers; electric motors; power generation system; protector systems; propellant transfer and missile-lifting systems; and operation, circuit analysis, and troubleshooting of various components.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0318

Control Systems Mechanic, GAM-72

Course Number: ABR31230Q.

Location: Technical Training Center, Amarillo AFB, TX.

Length: 23 weeks (600 hours).

Exhibit Dates: 2/60–12/68.

Objectives: To train airmen to perform as apprentice control systems mechanics.

Instruction: Lectures and practical exercises in the duties of apprentice control systems mechanics, including electrical fundamentals, DC and AC circuit analysis, magnetism, vacuum tube principles, power supplies, oscillators, wave-shaping circuits; flight control system assemblies and test equipment, aerodynamics and sensor circuits, and inspection and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0323

1. Avionics Officer (Other)
   (Air Electronics Officer)
2. Air Electronics Officer, Fighter A/C
3. Air Electronics Officer

Course Number: *Version 1:* OBR3231C; OB3051. *Version 2:* OB3051B. *Version 3:* OB3051.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 39–41 weeks (1170–1240 hours). *Version 2:* 17 weeks (510 hours). *Version 3:* 41 weeks (1230 hours).

Exhibit Dates: *Version 1:* 3/66–3/69. *Version 2:* 1/57–2/58. *Version 3:* 11/54–12/56.

Objectives: To train officers to supervise and manage avionics maintenance.

Instruction: Lectures and practical exercises in avionics maintenance management, including AC and DC circuits, transistors, electron tubes, power supplies, amplifiers, nonlinear wave shaping, communication techniques, microwaves, technical publications, supply functions, flight control and radio navigation aids, aircraft radar systems, electronic warfare systems and weapons control, and management and supervision.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, 3 in shop management, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics (4/74), 2 in shop management (12/68), and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 3:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics (4/74), 3 in shop management (12/68), and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0324

1. Electronic Warfare Technician
   (Aircraft ECM Maintenance Technician)
2. Aircraft ECM Maintenance Technician
   (Electronic Countermeasures Maintenance Technician)

Course Number: *Version 1:* AAR30173. *Version 2:* AA30173; AA30270.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 36–40 weeks (1080–1200 hours). *Version 2:* 17–19 weeks (510–570 hours).

Exhibit Dates: *Version 1:* 5/59–12/68. *Version 2:* 3/54–4/59.

Objectives: To train enlisted personnel to be aircraft electronic countermeasures maintenance technicians.

Instruction: Lectures and practical exercises in aircraft electronic countermeasures maintenance techniques, including basic mathematics, AC and DC circuits, power supplies, vacuum tubes and transistors, digital computer, electronic communication circuits, and system test equipment operation.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in shop management, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0325

Guidance Systems Mechanic (GAR-3)

Course Number: ABR31130E-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 24 weeks (630 hours).

Exhibit Dates: 10/58–12/68.

Objectives: To train airmen to perform as guidance systems mechanics on GAR-3 missiles.

Instruction: Lectures and practical exercises in the duties of guidance systems mechanics on GAR-3 missiles, including principles of electricity, analysis of various circuits, magnetism and electromagnetism, transformers, reactors, resonance and capacitance, vacuum tubes and power supplies, amplifier and wave-shaping circuits, basic GAR circuits and components, analysis of GAR missile systems, operation of the tracking and power function and control system, block-diagram analysis of systems checks, and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0326

Guidance Systems Mechanics

Course Number: ABR31130.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26 weeks (690 hours).

Exhibit Dates: 10/58–12/68.

Objectives: To teach airmen electrical and electronic fundamentals and components of missile guidance systems.

Instruction: Lectures and practical exercises in electrical and electronic fundamentals and components of missile guidance systems, including physics of motion, aerodynamics, launching methods, navigation, basic electricity, AC circuitry, vacuum tubes and transistors, amplification, wave shaping and multivibrators, oscilloscope construction, synchros and servomechanisms, missile guidance systems block diagrams, RF transmission, radar sensors, systems components, and specific missile and console equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0327

GUIDANCE SYSTEMS MECHANIC (BALLISTIC MISSILE INERTIAL)

Course Number: ABR31130P-2.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 24 weeks (630 hours).

Exhibit Dates: 1/61–12/68.

Objectives: To train airmen to perform as apprentice guidance systems mechanics.

Instruction: Lectures and practical exercises in the duties of apprentice guidance systems mechanics, including binary mathematics, AC and DC circuit fundamentals, oscilloscope, transformers and synchros, vacuum tubes, power supplies amplifiers, wave-shaping circuits, logic circuitry, inertial guidance systems operation and principles, gyros, mode switching, loop operation and troubleshooting, system data flow, power distribution, ground support equipment, electronic control unit testing, and missile inspection and maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0341

AIRBORNE RADIO REPAIRMAN

Course Number: AB30130-2.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 31 weeks (930 hours).

Exhibit Dates: 9/54–12/68.

Objectives: To train airmen to tune, operate, maintain, and repair airborne radio and related navigational equipment at the apprentice level.

Instruction: Lectures and practical exercises in the installation, operation, maintenance, and repair of specific airborne radio and related navigational equipment. Instruction includes electronic principles, AC and DC fundamentals, vacuum tube circuits, and modulation and high-frequency techniques.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (4/74).

AF-1715-0343

MISSILE OFFICER, WS-133B

Course Number: *Version 1:* 3OBR3121H. *Version 2:* OBR3121H. *Version 3:* OBR3121G-2.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 12 weeks (360 hours). *Version 2:* 13 weeks (390 hours). *Version 3:* 15 weeks (450 hours).

Exhibit Dates: *Version 1:* 3/69–12/73. *Version 2:* 3/66–2/69. *Version 3:* 4/65–2/66.

Objectives: To train officers as WS-133B missile officers.

Instruction: *All Versions:* Lectures and practical exercises on the WS-133B missile system, including missile alignment, maintenance management, and missile electrical and electronic systems. *Version 1:* Topics include Air Force management, missile fundamentals, and WS-133B general familiarization. *Version 2:* Topics include Air Force management, missile fundamentals, WS-133B general familiarization, and missile facility systems. *Version 3:* Topics include weapon system introduction and orientation, launch facility equipment, and maintenance sequences.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in electrical or electronic laboratory or 1 as a technical elective for nontechnical students (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1715-0344

1. MISSILE SYSTEMS ANALYST SPECIALIST, WS-133A
2. MISSILE SYSTEMS ANALYST SPECIALIST, WS-133A
   (Ballistic Missile Analyst Specialist, WS-133A)
   (Ballistic Missile Analyst Specialist, SM-80)

Course Number: *Version 1:* 3ABR31630G. *All Versions:* ABR31630G. *Version 2:* ABR31234G.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 35 weeks (960 hours). *Version 2:* 37–38 weeks (1020–1050 hours).

Exhibit Dates: *Version 1:* 9/67–12/73. *Version 2:* 8/62–8/67.

Objectives: To train airmen as WS-133A missile systems analyst specialists.

Instruction: *All Versions:* Lectures and practical exercises in the operation, inspection, check-out and periodic maintenance of WS-133A systems, including the launch facility, launch control facility, support base, aerospace ground equipment, electronic principles, propulsion systems, alignment and adjustment of targeting system, assembly and installation of components, use of standard and specialized test equipment, and inspection and maintenance. *Version 1:* Topics include missile maintenance management, nuclear safety, weapon system familiarization, launch control facility familiarization, and maintenance facility familiarization. *Version 2:* Topics include launch facility and launch control facility power systems, and environmental control systems, corrosion control, security system, personnel access procedures, launch and communication control consoles, consoles test set, communications and control system, and programmer group and guidance and control coupler and integrated systems maintenance.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (7/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in electronic laboratory (7/74).

AF-1715-0345

MISSILE SYSTEMS ANALYST SPECIALIST, WS-133A
(Ballistic Missile Analyst Specialist, WS-133A)

Course Number: ALR31630G; ALR31234G-3.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 18–20 weeks (540–600 hours).

Exhibit Dates: 10/65–12/68.

Objectives: To train personnel as WS-133A ballistic missile analyst specialists.

Instruction: Lectures and practical exercises in the operation, inspection, check-out, and periodic maintenance of WS-133A systems, including the launch facility, launch control facility, support base, aerospace ground equipment, electronic principles, propulsion systems, alignment and adjustment of targeting system, assembly and installation of components, use of standardized and specialized test equipment, inspection and maintenance records, and publications.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electronic laboratory (7/74).

AF-1715-0347

SPECIAL ELECTRONIC EQUIPMENT SPECIALIST

Course Number: AB30430-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 40 weeks (1170 hours).

Exhibit Dates: 5/55–12/68.

Objectives: To train enlisted personnel to operate and maintain special electronic equipment.

Instruction: Lectures and practical experience in special electronic equipment operation and maintenance, including AC and DC electrical fundamentals, vacuum tubes, amplifier and receiver circuits, oscillators, transmitters, construction of oscilloscope kit, and special circuits.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0348

ELECTRONIC DIGITAL DATA PROCESSING EQUIPMENT REPAIRMAN, CENTRAL-COMPUTER (416L-AN/FSQ-7)

Course Number: ATS30551B-3.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 19 weeks (760 hours).

Exhibit Dates: 7/62–12/68.

Objectives: To train enlisted personnel to be AN/FSQ-7 central computer repairmen.

Instruction: Lectures and practical exercises in AN/FSQ-7 central computer repair, including theory and application of digital data processing and computer principles, computer numbering systems principles, AN/FSQ-7 memory devices, computer control devices; and computer logic and logic circuit analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in computer software, 3 as an elective in computer hardware (4/74).

AF-1715-0350

SPECIAL ELECTRONICS EQUIPMENT SPECIALIST, Q SYSTEM

Course Number: AB30430-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 39 weeks (1080 hours).

Exhibit Dates: 10/56–12/68.

Objectives: To train enlisted personnel to operate and maintain special electronics equipment.

Instruction: Lectures and practical exercises in special electronics equipment operation and maintenance, including AC and DC fundamentals, vacuum tubes, amplifiers, oscillators, transmitter and receiver principles, special circuits, construction of oscilloscope kit, introduction to Q system, calibration and alignment of system, recording and processing, and film analysis and reporting.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0351

ELECTRONIC COMMUNICATIONS AND CRYPTOGRAPHIC EQUIPMENT SYSTEMS REPAIRMAN (ENCRYPTED DIGITAL DATA TERMINALS)(EDDT)

Course Number: 3ABR30630F.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 36–39 weeks (1080 hours).

Exhibit Dates: 8/69–12/73.

Objectives: To train enlisted personnel to be electronic communications and cryptographic equipment repairmen.

Instruction: Lectures and practical exercises in electronic communications and cryptographic equipment repair, including AC and DC circuit theory, electronic circuits, digital circuits, motors and generators, computer peripheral equipment, solid-state power supplies and amplifiers, and soldering techniques and test equipment operation.

Credit Recommendation: In the upper-division baccalaureate category, 5 semester hours in digital computers, and credit in digital computer laboratory on the basis of institutional evaluation (4/74).

AF-1715-0359

AVIONICS OFFICER

Course Number: 3OBR4041; 3OBR3231.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 21–23 weeks (678 hours).

Exhibit Dates: 7/70–12/73.

Objectives: To train officers to supervise the installation, maintenance, and repair of avionics systems.

Instruction: Lectures and practical exercises in the supervision of avionics systems installation, maintenance, and repair, and in background electronics fundamentals, including DC and AC principles; solid-state devices and electron tubes; power supplies; amplifiers and wave-shaping circuits; transmitter and receiver principles; digital computer fundamentals; and specific avionics systems (navigation, communications, warfare and attack aircraft systems, tactical fighter systems, and liaison aircraft).

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics and avionics (4/74).

AF-1715-0367

GROUND RADAR SYSTEMS SUPERVISOR/TECHNICIAN

Course Number: 3AAR30300.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 50 weeks (1440 hours).

Exhibit Dates: 11/67–12/73.

Objectives: To train enlisted personnel to perform as ground radar systems supervisors and technicians.

Instruction: Lectures and practical exercises in the basic concepts of electricity, electronics, and management of ground radar systems, including advanced electronic principles; operation of radar transmitters, receivers, synchronizing systems, and display systems; ECCM features; frequency diversity techniques; r-f transmission lines; ground radar planning; and evaluation.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity and electronics, 3 in management, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0368

AUTOMATIC TRACKING RADAR REPAIRMAN

Course Number: 3ABR30333.

Location: 3380th Technical School, Kessler AFB, MS.

Length: 37–39 weeks (1110 hours).

Exhibit Dates: 6/71–12/73.

Objectives: To train enlisted personnel to repair automatic tracking radars.

Instruction: Lectures and practical exercises in the basic concepts and techniques of electricity and electronics with applications to radar systems, including development and application of electronic principles; circuit analysis; digital techniques; alignment, testing; troubleshooting; and the operation, maintenance, and repair of the AN/MSQ-77 radar bomb-directing central, associated identification equipment, solid-state devices, and related test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 5 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0375

1. WEAPONS CONTROL SYSTEMS MECHANIC (F-106A/B MA-1, ASQ-25 SYSTEMS)
2. WEAPONS CONTROL SYSTEMS MECHANIC (F-106A/B: MA-1, ASQ-25 SYSTEMS)
   (Weapons Control Systems Mechanic (MA-1, ASQ-25 Systems))
3. WEAPONS CONTROL SYSTEMS MECHANIC (MA-1, ASQ-25 SYSTEMS)
4. WEAPONS CONTROL SYSTEMS MECHANIC (MA-1, ASQ-25 SYSTEMS)
   (Weapons Control Systems Mechanic (MA-1 System))
5. WEAPONS CONTROL SYSTEMS MECHANIC (MA-1 SYSTEMS)
6. WEAPONS CONTROL SYSTEMS MECHANIC (MA-1 SYSTEMS)
7. WEAPONS CONTROL SYSTEMS MECHANIC (MA-1 SYSTEM)
8. WEAPONS CONTROL SYSTEMS MECHANIC (MA-1 SYSTEM)

Course Number: *Version 1:* 3ABR32231A. *Version 2:* 3ABR32231A-5. *Version 3:* ABR32231A-5. *Version 4:* ABR32231A-5. *Version 5:* ABR32231A. *Version 6:* ABR32231A. *Version 7:* ABR32231A. *Version 8:* AB32231A.

Location: *Version 1:* School of Applied Aerospace Sciences, Lowry AFB, CO. *Version 1:* 3415th Technical School, Lowry AFB, CO. *Version 2:* 3415th Technical School, Lowry AFB, CO. *Version 3:* 3415th Technical School, Lowry AFB, CO. *Version 4:* 3415th Technical School, Lowry AFB, CO. *Version 5:* 3415th Technical School, Lowry AFB, CO. *Version 6:* Technical Training Center, Amarillo AFB, TX. *Version 7:* 3415th Technical School, Lowry AFB, CO. *Version 8:* 3415th Technical Training Wing, Lowry AFB, CO.

Length: *Version 1:* 22–24 weeks (660–720 hours). *Version 2:* 24–34 weeks (738–930 hours). *Version 3:* 37–39 weeks (1020–1080 hours). *Version 4:* 41 weeks (1140 hours). *Version 5:* 45 weeks (1480 hours). *Version 6:* 45 weeks (1480 hours). *Version 7:* 30 weeks (810 hours). *Version 8:* 30 weeks (810 hours).

Exhibit Dates: *Version 1:* 7/71–12/73. *Version 2:* 1/65–6/71. *Version 3:* 4/63–12/64. *Version 4:* 2/61–3/63. *Version 5:* 3/60–1/61. *Version 6:* 3/60–1/61. *Version 7:* 5/59–2/60. *Version 8:* 4/58–4/59.

Objectives: To train enlisted personnel who have backgrounds in electricity and vaccum tube electronics to maintain and repair specific weapons control systems.

Instruction: *All Versions:* Lectures and practical exercises in electronics as applied to weapons systems; communications security; saftey and first aid; technical publications; schematic interpretation and symbology; power checks and alignments; arithmetic; decimal and binary numbers; computer routines, checks, and alignments, and fault isolation procedures and ground checks. *Version 5:* Instruction includes detailed study of MA-1 weapons control system, computer fundamentals and arithmetic, radar transmitting and receiving, MA-1 measurements, and troubleshooting. *Version 6:* Instruction includes detailed study of MA-1 weapons control system, computer fundamentals and arithmetic, radar transmitting and receiving, MA-1 measurements, and troubleshooting. *Version 7:* Instruction includes algebra, vectors, trigonometry, AC and DC circuits, vacuum tube circuit application, transients and timing circuits, microwaves, servomechanisms, and computer devices. *Version 8:* Instruction includes basic radar principles.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 3:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 4:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 5:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 6:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 7:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 8:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0376

MISSILE SYSTEMS ANALYST SPECIALIST (LGM-25)

Course Number: 3ABR31630F; ABR31630F.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 32–33 weeks (900 hours).

Exhibit Dates: 5/66–8/71.

Objectives: To train enlisted personnel to maintain the Titan II weapon system.

Instruction: Lectures and practical exercises in the maintenance of the Titan II weapon system, including operation and data flow analysis, minor troubleshooting, inspection, and monitoring; scheduled and unscheduled maintenance of missile airframe equipment, thrust mount and shock isolation system, electrical system (various circuits, linear wave shaping, and power supplies), re-entry vehicle equipment, handling equipment, launch control monitoring and check-out equipment, cable assembly groups, facility power control boards, communications equipment, flight control system, propulsion system, and propellant loading and pressurization system.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0378

AUTOMATIC FLIGHT CONTROL SYSTEMS TECHNICIAN (FIGHTERS AND B-58)
(Automatic Flight Control Systems Technician)

Course Number: AAR32570-A-1; 2AAR32570A.

Location: 3320th Technical School, Chanute AFB, IL.

Length: 14-15 weeks (410-450 hours).

Exhibit Dates: 5/64-2/68.

Objectives: To train enlisted personnel to perform as automatic flight control systems technicians.

Instruction: Lectures and practical exercises in automatic flight control systems operation, including servos, electronic test equipment operation, vacuum tubes, transistors, power supplies, oscillators, wave-shaping devices, and electrical and pneudraulic power supplies.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0382

AIRBORNE ECM OPERATOR
(Airborne Electronic Countermeasures Specialist)

Course Number: ZZ29334; ZZ30134.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 16 weeks (497-499 hours).

Exhibit Dates: 6/54-12/68.

Objectives: To train airmen to adjust and operate electronic countermeasures equipment.

Instruction: Lectures and practical exercises in the adjustment and operation of electronic countermeasures equipment, including AC and DC fundamentals, vacuum tubes, receiver and transmitter fundamentals, operation of specific search and analysis equipment, principles of radar, mission planning and navigation, in-flight maintenance, electronic reconnaissance and jamming missions and tactics.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (4/74).

AF-1715-0390

TELECOMMUNICATIONS SYSTEM CONTROL SPECIALIST BY CORRESPONDENCE

Course Number: 30750.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/83-Present.

Objectives: To teach personnel to monitor and analyze performance of radio and wire telecommunications circuits and equipment and to maintain and repair that equipment.

Instruction: The course is presented through self study materials in microwave circuits and theory, antennas and transmission theory, and data transmission and telecommunications. Also included are review materials in semiconductor devices and digital electronics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in communication systems and telecommunications (3/85); in the upper-division baccalaureate category, 3 semester hours in data communications for non-engineering degree program students (3/85). There is a proctored final examination.

AF-1715-0392

HM4118 ELECTRONIC COMPUTER REPAIRMAN/OPERATOR/407L

Course Number: 3AZR30554-10.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS.

Length: 16 weeks (480 hours).

Exhibit Dates: 1/73-12/73.

Objectives: To train enlisted personnel to operate, troubleshoot, and repair electronic computers in the TACS (407L) systems.

Instruction: Lectures and practical exercises in digital computer-related equipment, including logic operations and circuits, maintenance procedures, memory storage, registers, input-output buffers, block-diagram analysis, printers, key punches, tape punches, magnetic tape readers, and test procedures.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in digital computer hardware on the basis of institutional evaluation (4/74).

AF-1715-0397

1. AIR TRAFFIC CONTROL RADAR TECHNICIAN
2. AIR TRAFFIC CONTROL RADAR TECHNICIAN
(Air Traffic Control Radar Maintenance Technician)

Course Number: *Version 1:* AAR30371. *Version 2:* AAR30371.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 39 weeks (1170 hours). *Version 2:* 33-34 weeks (990-1020 hours).

Exhibit Dates: *Version 1:* 1/64-12/68. *Version 2:* 9/59-12/63.

Objectives: To train airmen to maintain and repair air traffic control radar and associated equipment at the advanced level.

Instruction: *All Versions:* Lectures and practical exercises in the maintenance and repair of air traffic control radar and associated equipment, including radar, test and communications equipment inspection and operation, various indicators, and remoting system analysis. *Version 1:* Includes applied mathematics, DC and AC circuits, electronics principles, power supplies, electronic digital data processing, maintenance management, and measuring equipment. *Version 2:* Includes DC and AC circuits, electronics principles, power supplies, and advanced circuitry.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 5 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0406

AUTOMATIC TRACKING RADAR SPECIALIST (RATE AND TRACK SUBSYSTEMS) (SM-65)

Course Number: ABR3033C.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 45 weeks (1260 hours).

Exhibit Dates: 8/61-12/68.

Objectives: To train enlisted personnel to operate, maintain, and repair the SM-65 (Atlas) automatic tracking radar set.

Instruction: Lectures and practical exercises in the operation, maintenance, and repair of the SM-65 (Atlas) automatic tracking radar set, including fundamentals of electronics (AC and DC circuits, transistors, vacuum and special tubes, electronic circuits, motors and servomechanisms, special circuits, and microwave principles); theory of operation of guidance, transmitter, receiver, antenna, Doppler simulator and console subsystem; and testing procedures for specialized equipment. Very little mathematics involved.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0412

WEATHER EQUIPMENT REPAIRMAN
(Ground Weather Equipment Operator)
(Basic Weather Service (Equipment Channel))

Course Number: AB25130.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 19 weeks (540 hours).

Exhibit Dates: 1/54-9/55.

Objectives: To train enlisted personnel to inspect, maintain, and repair weather equipment.

Instruction: Lectures and practical exercises in electronic principles (AC and DC circuits, electron tube and transistor principles, power supplies, wave-shaping circuits, amplifier basic concepts, and oscillators), radar transmitters and receivers, and troubleshooting, maintenance, and repair of specific weather equipment. Instruction includes extensive use of training and testing equipment. Also included are lectures and exercises in elementary meteorology, weather equipment, Rawinsonde evaluation, and equipment laboratory.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in meteorology (12/68).

AF-1715-0417

WEATHER EQUIPMENT TECHNICIAN

Course Number: AAR30270; AA25170.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 43-44 weeks (1290-1320 hours).

Exhibit Dates: 4/55-7/68.

Objectives: To train weather equipment personnel and airmen to perform as meteorological equipment technicians/supervisors.

Instruction: Lectures and practical exercises in the maintenance of meteorological equipment and the supervision of meteorological equipment operation and maintenance, including analysis of various circuits, principles of transformer action, time constants, resonance, vacuum tubes, amplifiers, oscillators, power supplies, transmitter and receiver circuits, nonelectric meteorological equipment functions, and fundamentals of radar. Includes mathematics up to basic concepts of calculus.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0422

Air Traffic Control Radar Repairman AN/CPN-4

Course Number: AB30331B.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 23-38 weeks (1020-1050 hours).

Exhibit Dates: 10/54-12/68.

Objectives: To train enlisted personnel to operate, tune, and align AN/CPN-4 radar equipment.

Instruction: Lectures and practical experience in AN/CPN-4 radar equipment operation, tuning, and alignment, including search indicating system, precision indicating system, and power and operations trailer. Instruction includes AC and DC circuits, circuit testing, RLC circuits, transients, vacuum tube electronics, DC instruments, and servo principles.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0427

Aircraft Early Warning Radar Repairman

Course Number: *Version 1:* 3ABR30132. *Version 2:* ABR30132. *Version 3:* ABR30132. *Version 4:* ABR30132; ABR30132-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 41 weeks (1140 hours). *Version 2:* 44-45 weeks (1230-1260 hours). *Version 3:* 42 weeks (1170 hours). *Version 4:* 38 weeks (1050 hours).

Exhibit Dates: *Version 1:* 3/68-12/73. *Version 2:* 2/62-2/68. *Version 3:* 5/61-1/62. *Version 4:* 3/58-4/61.

Objectives: To train airmen to operate, maintain, and repair aircraft early warning radar systems equipment.

Instruction: *All Versions:* Lectures and practical exercises in the operation, maintenance, and repair of aircraft early warning radar systems equipment, including limited treatment of DC and AC circuit theory, vacuum tubes, testing procedures, amplifiers and oscillators, radar microwave principles and propagation, motors and servomechanisms, and ancillary systems and equipment. *Version 1:* Includes solid-state devices, receiver principles, and a fuller treatment of AC and DC circuit theory. *Version 2:* Includes solid-state devices, transistors, detection and discrimination procedures, and gyro reference system.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 3:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 4:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0428

AN/APQ-24A System Mechanic

Course Number: AB32130F.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 30 weeks (900 hours).

Exhibit Dates: 2/55-12/68.

Objectives: To train airmen to operate and maintain the AN/APQ-24A bombing and navigation system.

Instruction: Lectures and practical exercises in the operation and maintenance of the AN/APQ-24A bombing and navigation system, including basic electricity and electronics (tubes, magnetism and AC and DC currents, amplifiers, power supplies, modulation, special circuits, transmission, generation and propagation of microwave energy and synchros, and applications to radar equipment), and analysis of specific equipment and the associated ground position indicator.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, and credit in electrical laboratory, all on the basis of institutional evaluation (4/74).

AF-1715-0440

Electronic Computer Systems Specialist by Correspondence

Course Number: 30554.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/84-Present.

Objectives: To teach personnel to install, maintain, and repair computer systems equipment.

Instruction: This self-study course provides instruction in basic digital electronics with supplementing study in semiconductor devices and test equipment operation. Course includes computer system maintenance and operations along with review tests throughout the course. There is supervised on job experience offered, and a proctored final examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semster hours in digital electronics , 1 in semiconductor circuit analysis (3/85).

AF-1715-0441

Electronic Digital Data Processing Repairman (Display Equipment/SACCS)

Course Number: 3ABR30534B-2; 3ABR30531-6.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3380th Technical School, Keesler AFB, MS.

Length: 38-40 weeks (1080-1118 hours).

Exhibit Dates: 9/68-12/73.

Objectives: To train enlisted personnel to maintain and repair digital equipment.

Instruction: Lectures and practical exercises in digital equipment maintenance and repair, including printer chain, display chain, projection, aerospace ground equipment, and alert-transmit console; and electronic computer principles, including computer introduction, AC and DC circuits, magnetism, vacuum tubes and solid-state devices and circuits, Boolean algebra, computer components, computer units and programming, computer systems, and site management.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in electronics (4/74).

AF-1715-0442

Avionic Inertial and Radar Navigation Systems Specialist by Correspondence

Course Number: 32854.

Location: Extension Course Institute, Gunter AFS,AL.

Length: Maximum 52 weeks.

Exhibit Dates: 11/84-6/89.

Objectives: To upgrade the technical skill level of electronics technicians in microwave and computer fundamentals and devices applied to radar and navigation system maintenance.

Instruction: The course provides an introduction to electrical measurements, digital systems, and calculations related to navigation and error analysis. Description of the principles of navigation systems including doppler radar, inertial,and TACAN is part of the program. Also covered are devices including gyros, accelerometers, radar receiver-transmitters, antennas, and navigation computers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in microwave fundamentals or in UHF techniques (3/85). Proctored final examination is required.

AF-1715-0443

Electronic Computer Systems Repairman (RCC-EDLCC/465L)

Course Number: 3ABR30534B-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 33 weeks (990 hours).

Exhibit Dates: 6/72-12/73.

Objectives: To train enlisted personnel to repair electronic digital data processing computer equipment.

Instruction: Lectures and practical exercises in electronic digital data processing repair, including EDLCC/RCC data processing equipment; digital techniques; circuit logic; maintenance concepts; test routines and malfunction analysis; components isolation and repair; use of aerospace ground equipment; and electronic computer principles, including introduction to computers, AC and DC circuits, magnetism, vacuum tube and solid-state devices and circuits, Boolean algebra, computer components, computer units and programming, computer systems, and site management. Includes AC motors and synchro systems, wave shaping and generating circuits, input-output devices and Modems.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in computer systems, 1 in electricity or electronics (3/74).

AF-1715-0447

1. Electronic Computer Systems Repairman (BUIC AN/GYK-19)
2. Electronic Computer Systems Repairman (BUIC AN/GSA-51A)

Course Number: *All Versions:* 3ABR30534C.

Location: *Version 1:* School of Applied Aerospace Sciences, Keesler AFB, MS. *Version 2:* 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 40 weeks (1200 hours). *Version 2:* 43 weeks (1278 hours).

Exhibit Dates: *Version 1:* 2/73-12/73, 2/73-12/73.

Objectives: To train airmen to repair electronic computer systems.

Instruction: Lectures and practical exercises in the repair of electronic computer systems, including DC and AC circuits, vacuum and semiconductor electronics, computer logic and components, operation and application of test equipment, maintenance management, programming of specific equipment, and system operation, core memory, input, output, timing analysis, and terminal operation for specific computer systems.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in computer laboratory, and 3 as an elective in computers (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in digital electronics (4/74).

AF-1715-0448

ELECTRONIC COMPUTER SYSTEMS REPAIRMAN (DISPLAY EQUIPMENT/412L)

Course Number: 3ALR30554.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 20 weeks (588 hours).

Exhibit Dates: 5/72-12/73.

Objectives: To train enlisted personnel to maintain the 412L display equipment at the organizational and intermediate levels.

Instruction: Lectures and practical exercises in the maintenance of the 412L display equipment, including specific equipment terminology and circuit symbology, logic/circuit analysis and maintenance of the radar data processor, track data processor, surveillance and identification group, height data group, weapons control group display, and performance monitor group; and application and operation of specialized test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in computers (4/74).

AF-1715-0449

ELECTRONIC COUNTERMEASURES OFFICER (ECM Officer)

Course Number: ZZ302102.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 30 weeks (927 hours).

Exhibit Dates: 2/56-12/68.

Objectives: To train rated observers to operate and maintain specialized countermeasures equipment.

Instruction: Lectures and practical exercises in AC and DC circuits, vacuum tube electronics, special electronic circuits review, intercept and analysis equipment, reconnaissance and jamming flights, active countermeasures, and jamming flight equipment operation and maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour as an elective in electricity or electronics (5/74).

AF-1715-0450

TELECOMMUNICATIONS SYSTEMS/EQUIPMENT MAINTENANCE BY CORRESPONDENCE

Course Number: 30652.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/83-2/88.

Objectives: To advance the technical skills of the telecommunication technician in both equipment and systems.

Instruction: This is a correspondence course and practical exercises in repair and maintenance of telecommunication equipment and work centered management. Topics include maintenance responsibilities, work center management, electronic and typewriter principles, teletypewriter principles, and telecommunications systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer peripheral repair (3/85). There is a proctored final examination required.

AF-1715-0452

MISSILE SYSTEMS ANALYST SPECIALIST, WS-133A-M

Course Number: 3ABR31630G-1; ABR31630G-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 37 weeks (1020 hours).

Exhibit Dates: 10/67-7/72.

Objectives: To train enlisted personnel to be missile system analyst specialists.

Instruction: Lectures and practical exercises in diode and transistor circuits, digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, introduction to magnetism, AC and DC motors and synchros, electron tubes, power supplies, regulators, multivibrators, blocking oscillators, AM and FM modulation and demodulation, transmitters, wave-guides, transmission lines, antennas, UHF and microwave oscillators and amplifiers, circuits, circuit counters, and storage devices.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0453

AIRBORNE METEOROLOGICAL/ATMOSPHERIC RESEARCH EQUIPMENT (MET/ARE) REPAIRMAN

Course Number: 3ABR30231.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 34-35 weeks (960-1014 hours).

Exhibit Dates: 5/68-12/73.

Objectives: To train enlisted personnel to maintain and repair airborne meteorological and atmospheric research equipment.

Instruction: Lectures and practical exercises in airborne meteorological and atmospheric research equipment maintenance and repair, including specific equipment operation, block analysis, vertical and horizontal subsystems, data handling subsystem, control conversion subsystem, dropsonde data recording system, test equipment and check-out of components, dewpoint hygrometer and sea surface temperature indicator, atmospheric research equipment; and digital techniques, including binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, and storage devices; electron tubes; introduction to magnetism, AC and DC motors and synchros; use of the oscilloscope in circuit measurement; UHF and microwave oscillators and amplifiers; and power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, transmitters, wave-guides, and cavity resonators.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in electronics (4/74).

AF-1715-0454

GAM ANALYST MECHANIC, GAM-77

Course Number: ABR31533Q-2.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 38-41 weeks (1050-1140 hours).

Exhibit Dates: 9/61-5/64.

Objectives: To train maintenance personnel to be missile analyst mechanics.

Instruction: Lectures and practical exercises in missile familiarization, flight control systems, missile systems, and guidance systems; digital techniques, including binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, and storage devices; electron tubes; introduction to magnetism; AC and DC motors and synchros; use of the oscilloscope in circuit measurement; UHF and microwave oscillators and amplifiers; and power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, transmitters, wave-guides, and cavity resonators.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0455

1. NAVIGATION/BOMBING/TACTICS TRAINER SPECIALIST
2. NAVIGATION/BOMBING/TACTICS TRAINER SPECIALIST (Navigation/Bombing Trainer and Flight Simulator Tactics Specialist)

Course Number: *All Versions:* 3ABR34330-2.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 32 weeks (960 hours). *Version 2:* 34-35 weeks (960-1020 hours).

Exhibit Dates: *Version 1:* 8/72-12/73. *Version 2:* 9/69-7/72.

Objectives: To train enlisted personnel as flight simulation specialists.

Instruction: Lectures and practical exercises in introduction to digital computers, solid-state digital circuitry; radar principles and navigation systems; peripheral equipment operation, including memories, tape units, and printers; digital techniques, including binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, and storage devices; electron tubes; introduction to magnetism; AC and DC motors and synchros; use of the oscilloscope in circuit measurement; UHF and microwave oscillators and amplifiers; and power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, transmitters, wave-guides, and cavity resonators.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in digital computers, and additional credit in digital computers on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in digital computers, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0456

Missile Electronic Equipment
Specialist, WS-133A

Course Number: ABR31632G.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 42 weeks (1170 hours).

Exhibit Dates: 11/66-12/68.

Objectives: To train enlisted personnel to operate and inspect missile launch equipment.

Instruction: Lectures and practical exercises in missile launch equipment operation and inspection, including equipment familiarization, introduction to logic and test equipment, and operation and maintenance of electronic facility base maintenance test equipment; and electronic principles, including digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, storage devices, electron tubes, introduction to magnetism, AC and DC motors and synchros, use of the oscilloscope in circuit measurement, UHF and microwave oscillators and amplifiers, power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, transmitters, wave-guides, and cavity resonators.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0458

1. Missile Electronic Equipment
   Specialist (AGM-28A/B)
2. Air Launch Missile Checkout
   Equipment Repairman (AGM-28A/B)
3. Air Launch Missile Checkout
   Equipment Repairman (AGM-28A/B)
   (GAM Checkout Equipment Repairman
   (GAM-77))

Course Number: *Version 1:* 3ABR31632Q. *Version 2:* ABR31534Q. *Version 3:* ABR31534Q.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 27 weeks (780 hours). *Version 2:* 35 weeks (960 hours). *Version 3:* 38-39 weeks (1050-1080 hours).

Exhibit Dates: *Version 1:* 11/68-12/73. *Version 2:* 3/66-10/68. *Version 3:* 5/63-2/66.

Objectives: To train enlisted personnel to maintain and repair electronic equipment and air launch missile check-out equipment.

Instruction: Lectures and practical exercises in the maintenance and repair of missile electronic equipment and air launch missile check-out equipment, including missile familiarization, missile/pylon simulator, pneumatic and hydraulic automatic ground equipment, flight attitude positioner, electrical components test stands, and printed circuit card test set; and electronic principles, including digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, storage devices, electron tubes, introduction to magnetism, AC and DC motors and synchros, use of the oscilloscope in circuit measurement, UHF and microwave oscillators and amplifiers, power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, wave-guides, and cavity resonators.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the upper-division baccalaureate category, 8 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0460

Automatic Flight Control System
Specialist

Course Number: 3ABR32530-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 34 weeks (960 hours).

Exhibit Dates: 5/71-12/73.

Objectives: To train enlisted personnel to maintain automatic flight control systems.

Instruction: Lectures and practical exercises in automatic flight control systems maintenance, including basic physics and mechanics, computer operation, power distribution circuitry, digital logic, and analog and servo systems; and electronic fundamentals, including digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, storage devices, electron tubes, introduction to magnetism, AC and DC motors and synchros, use of the oscilloscope in circuit measurement, UHF and microwave oscillators and amplifiers, power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, transmitters, wave-guides, and cavity resonators.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics and electronics laboratory (4/74).

AF-1715-0461

Missile Electronic Equipment
Specialist, WS-133B

Course Number: 3ABR31632H; ABR31632H.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 38 weeks (1050 hours).

Exhibit Dates: 9/66-3/71.

Objectives: To train enlisted personnel to operate, maintain, and inspect missile launch and test equipment.

Instruction: Lectures and practical exercises in electronic principles, including digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, storage devices, electron tubes, introduction to magnetism, AC and DC motors and synchros, use of the oscilloscope in circuit measurement, UHF and microwave oscillators and amplifiers, power supplies, regulators, multivibrators, blocking oscillators, transmission lines, antennas, transmitters, wave-guides, and cavity resonators; weapon system familiarization; introduction to logic and test equipment; manual and semiautomatic maintenance ground equipment test set, digital data test set; radio test set; interrogator and transponder test set; message processing control group; terminal digital data system; and launch facility power distribution and test sets.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electronics laboratory on the basis of institutional evaluation (3/74).

AF-1715-0464

Offensive Fire Control Systems
Mechanic (MA-8 System)
(Fire Control Systems Mechanic (MA-8 System))

Course Number: ABR32230L.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 29-35 weeks (768-960 hours).

Exhibit Dates: 11/59-12/68.

Objectives: To train airmen to repair fire control systems.

Instruction: Lectures and practical exercises in the repair of fire control systems, including DC, AC, and reactive circuits; vacuum tubes and solid-state devices; amplifiers and oscillators; detection and discrimination; microwave operation; special-purpose tubes; multivibrators; sweep and logic circuits; circuit analysis; hand tool use; specific transmitters, modulators, antennas, receivers, range computers, power supplies, computing gun, bombs, rocket sights and bombing computers; and system tie-in and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

AF-1715-0465

Ground Radio Communications
Technician by Correspondence

Course Number: 30474.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/83-Present.

Objectives: To provide management training necessary to raise the ground radio communications specialist to supervisory level.

Instruction: This is a self study program supplemented by on-job experience in supervision, evaluating and rating personnel, safety, security, publications, and training as they apply to a maintenance supervisor.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in personnel supervision (3/85). There is a proctored final examination.

AF-1715-0466

Electronic Warfare Systems
Specialist by Correspondence

Course Number: 32853.

Location: Extension Course Institute, Gunter AFS AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/84-Present.

Objectives: To advance the electronic warfare systems specialist into leadership (middle management) positions involving personnel supervision and equipment and shop management.

Instruction: This is a correspondence course with practical exercises in personnel supervision, management, and maintenance of electronics warfare equipment and electronics warfare systems. Topics include introduction to supervision and management, electronic equipment maintenance, computer principles, basic electricity and electronics, and accident prevention.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communication systems, 3 in introduction to computers (3/85). Proctored final examination is required.

AF-1715-0467

Avionic Communications Specialist by Correspondence

Course Number: 32851.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximim 52 weeks.

Exhibit Dates: 7/84–6/89.

Objectives: To advance avionics communication specialists into leadership (middle management) positions of personnel supervision and equipment and shop management.

Instruction: This is a correspondence course and practical exercises in personnel supervision, shop management and maintenance of aerospace equipment and communications systems. Topics include introduction to supervision and management, avionics equipment maintenance, computer principles, communications systems, basic electricity and electronics, navigational aids, and accident prevention.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications systems, 2 in management supevision (3/85). There is a required proctored final examination.

AF-1715-0474

1. Communications Maintenance Officer
2. Communications Officer
3. Communications Officer
4. Communications Officer

Course Number: *Version 1:* 3OBR3031. *Version 2:* 3OBR3031. *Version 3:* OBR3031. *Version 4:* OBR3031.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 32 weeks (960 hours). *Version 2:* 40 weeks (1200 hours). *Version 3:* 45 weeks (1350 hours). *Version 4:* 43 weeks (1290 hours).

Exhibit Dates: *Version 1:* 6/70–12/73. *Version 2:* 10/68–5/70. *Version 3:* 2/64–9/68. *Version 4:* 7/55–1/64.

Objectives: To train officers to command communications units.

Instruction: *All Versions:* Lectures and practical exercises in electronic principles, including AC and DC circuits, RLC circuits, solid-state power supplies and amplifiers, solid-state applications in wave generations, digital techniques, electron tubes, circuits, transmitters and receiver systems and microwave principles. *Version 1:* Instruction includes communications management and telephone systems, airbase systems, communications tributary and relay stations, multichannel communications systems, radio facilities, navigation aids, communications security, and command and control communications. *Version 2:* Instruction includes communications management and telephone systems, airbase systems, communications tributary and relay stations, multichannel communications systems, radio facilities, navigation aids, communications security, and command and control communications. *Version 3:* Instruction includes communications management and telephone systems, airbase systems, communications tributary and relay stations, multichannel communications systems, radio facilities, navigation aids, communications security, and command and control communications. *Version 4:* Instruction includes communications electronics, radio communications equipment, wire communications equipment, cryptographic communications, and communications problems and procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 12 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 12 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (4/74). *Version 3:* Credit is not recommended (4/74). *Version 4:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics and additional credit in electricity or electronics on the basis of institutional evaluation (4/74).

AF-1715-0475

Avionic Sensor Systems Specialist (Electronic Sensors)

Course Number: 3ABR32930A.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 31 weeks (930 hours).

Exhibit Dates: 8/71–12/73.

Objectives: To train airmen to operate, maintain, and repair electronic aircraft sensor systems.

Instruction: Lectures and practical exercises in electronics fundamentals and the operation, maintenance, and repair of electronic aircraft sensor systems, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, electronic side-looking radar (SLR) sets, infrared sensor systems, data display sets, camera parameter controls, reconnaissance laser systems, and low-light-level television sensor systems.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electricity or electronics, and 3 additional hours in electricity or electronics on the basis of institutional evaluation (4/74).

AF-1715-0476

1. Integrated Avionics Component Specialist (Navigation/Flight and Weapons Control, and Flight Data Recorder Systems)
2. Integrated Avionics Component Specialist (Navigation/Flight and Weapons Control)
   (Integrated Avionics System Specialist (Navigation/Flight and Weapons Control))

Course Number: *All Versions:* 3ABR32631A.

Location: *Version 1:* School of Applied Aerospace Sciences, Lowry AFB, CO. *Version 2:* 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 26 weeks (780 hours). *Version 2:* 28–39 weeks (840–1170 hours).

Exhibit Dates: *Version 1:* 2/73–12/73. *Version 2:* 10/70–1/73.

Objectives: To train airmen to inspect, modify, troubleshoot, and repair avionics component systems (navigation/flight and weapon control and flight data recorder systems) at the intermediate level.

Instruction: *All Versions:* Lectures and practical exercises in maintenance electronics or electronics fundamentals, and the inspection, modification, troubleshooting, and repair of avionics components systems (navigation/flight and weapon control and flight data recorder systems), including DC and AC fundamentals, tubes, power supplies, transistors, amplifiers, oscillators, wave-shaping circuits, AM and FM, electrical test equipment, aerospace ground test equipment, and maintenance of specific airborne equipment and components. *Version 1:* Includes electricity principles, semiconductors, computer principles (analog and digital), multivibrators, digital circuits, AM, FM, balanced modulation, principles of radar, infrared and lasers, and system analysis procedures. *Version 2:* Includes single sideband, transmission lines and antennas, servomechanisms, cavity resonators, and microwave principles.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in electricity and electronics and additional credit in electricity and electronics on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in basic electronics, 1 in electronics laboratory, and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0477

1. Missile Guidance and Control Specialist (CGM-13B, GEMS)
2. Missile Guidance and Control Specialist (CGM-13B, GEMS)
   (Tactical Missile Guidance Mechanic (CGM-13B/GEMS))
   (Tactical Missile Guidance Mechanic (MACE, CGM-13B/GEMS))

Course Number: *Version 1:* 3AZR3165N-2; AZR31651N-2. *Version 2:* ABR31631N-2; ABR31431Y.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 28–30 weeks (840–900 hours). *Version 2:* 33–49 weeks (900–1380 hours).

Exhibit Dates: *Version 1:* 2/67–12/73. *Version 2:* 9/63–1/67.

Objectives: To train airmen to perform as missile guidance and control specialists.

Instruction: Lectures and practical exercises in electronics fundamentals and in the operation, maintenance, and repair of missile guidance and control equipment and associated test sets (CGM-13B), or in the operation, maintenance, and repair of missile guidance and control equipment and associated test sets (TM-76B), including DC and AC circuits, reactive circuits, vacuum tubes and transistors, amplifiers and oscillators, aerospace ground equipment, inertial guidance theory, and missile guidance components; power supplies; wave-shaping circuits; AM and FM; single sideband; transmission lines and antennas; servomechanisms; cavity resonators; microwave principles; and electrical test equipment.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0478

Avionic Sensor Systems Specialist (Electro-Optical Sensors)

Course Number: 3ABR32930B; 3ABR30135B.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 28–32 weeks (840–870 hours).

Exhibit Dates: 2/70–12/73.

Objectives: To train airmen to repair aircraft sensor systems.

Instruction: Lectures and practical exercises in electronics fundamentals and the repair of aircraft sensor systems, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, and maintenance of electro-optical cameras, data display sets, aircraft cameras parameter controls, viewfinders, camera mounts, magazines and cassettes, and camera controls.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0479

Aircraft Sensor Systems Repairman
(Electronic Sensors)

Course Number: 3ABR30135A.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 31-34 weeks (930-990 hours).

Exhibit Dates: 2/70-12/73.

Objectives: To train airmen to inspect, maintain, and repair aircraft sensor systems.

Instruction: Lectures and practical exercises in electronics fundamentals and the inspection, maintenance, and repair of aircraft sensor systems, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, microwave principles, electrical test equipment, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, optics, radar and laser principles, and instruction in electronic side-looking radar (SLR) sets, infrared sensor systems, data display sets, camera parameter controls, reconnaissance laser systems, and low-light-level television sensor systems.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0480

Space Communications Systems
Equipment Operator/Specialist

Course Number: 3ABR30436.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS.

Length: 27 weeks (810 hours).

Exhibit Dates: 9/72-12/73.

Objectives: To train airmen to operate, install, inspect, maintain, and repair space communications terminal equipment, automatic tracking systems, and associated equipment.

Instruction: Lectures and practical exercises in electronics fundamentals and the operation, installation, inspection, maintenance and repair of space communications terminal equipment, automatic tracking systems, and associated equipment, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, modulation, UHF-SHF equipment, voice and data multiplex, frequency standards and timing units, and signaling systems.

Credit Recommendation: In the upper-division baccalaureate category, 21 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (3/74).

AF-1715-0481

1. Missile Guidance and Control Specialist (CGM-13B, GSC)
2. Missile Guidance and Control Specialist (CGM-13B, GSC)
   (Tactical Missile Guidance Mechanic (CGM-13B))
3. Tactical Missile Guidance Mechanic (MACE, MGM-13C)
   (Tactical Missile Guidance Mechanic (TM-76B, GSC))
   (Tactical Missile Guidance Mechanic and Checkout Equipment Repairman (TM-76B, GEMS))
   (Guidance System Mechanic (TM-76B))

Course Number: *Version 1:* 3ABR31631N-1. *Version 2:* ABR31631N-1. *Version 3:* ABR311306-2; ABR31431N.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 33-36 weeks (900-990 hours). *Version 2:* 28-36 weeks (750-990 hours). *Version 3:* 30-35 weeks (810-960 hours).

Exhibit Dates: *Version 1:* 3/68-12/73. *Version 2:* 2/65-2/68. *Version 3:* 12/60-1/65.

Objectives: To train airmen to perform as missile guidance and control specialists (CGM-13B or TM-76B).

Instruction: Lectures and practical exercises in maintenance of missile guidance and control equipment, including inertial guidance systems theory, operation, components, and troubleshooting; ground support equipment; DC and AC fundamentals; reactive circuits; vacuum tubes and solid-state devices; amplifiers and oscillators; electrical test equipment and system test consoles; power supplies; wave-shaping circuits; AM; FM; single sideband; transmission lines; servomechanisms; antennas; cavity resonators; and microwave principles.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics and additional credit in electronics on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 9 semester hours in electricity or electronics and additional credit in electronics on the basis of institutional evaluation (4/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0482

Defensive Fire Control System
Mechanic (A-3A, MD-9, ASG-15
Turrets)

Course Number: 3ABR32330G.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 30-33 weeks (894 hours).

Exhibit Dates: 7/68-2/71.

Objectives: To train airmen to perform as defensive fire control system mechanics or B-52 turret system mechanics.

Instruction: Lectures and practical exercises in maintenance electronics and defensive fire control systems, electrical fundamentals, and maintenance of B-52 turret systems, including basic electricity principles, AC and DC, amplifiers, power supplies, computer, track radar and search radar data flow and adjustments, and testing procedures and equipment. Includes vacuum tubes, transistors, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, various modes of operation, harmonization, and 50 caliber machine gun equipment.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0483

1. Bomb Navigation System Mechanic (B-52E, F, G, H; ASB-4A/9A/16 Systems)
2. Bomb Navigation Systems Mechanic (B-52E, F, G, H; ASB-4A/9A/16 Systems)
   (Bomb Navigation Systems Mechanic (ASB-4A/9A/16 Systems))
   (Bomb Navigation Systems Mechanic (ASB-4/4A/9/9A/16 Systems))
3. Bomb Navigation Systems Mechanic (ASB-4/4A/9/9A/16 Systems)
4. Bomb Navigation Systems Mechanic (ASB-4 Systems)
5. Bomb Navigation Systems Mechanic (MA-2 System)

Course Number: *Version 1:* 3ABR32130K. *Version 2:* 3ABR32130K; ABR32130K. *Version 3:* ABR32130K. *Version 4:* ABR32130K. *Version 5:* AB32130K.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 33-36 weeks (990-1020 hours). *Version 2:* 40 weeks (1110 hours). *Version 3:* 42 weeks (1170 hours). *Version 4:* 26 weeks (690 hours). *Version 5:* 24 weeks (630 hours).

Exhibit Dates: *Version 1:* 1/69-12/73. *Version 2:* 5/62-12/68. *Version 3:* 8/61-4/62. *Version 4:* 7/59-7/61. *Version 5:* 2/58-6/59.

Objectives: To train airmen to test, maintain, and repair specific bomb navigation systems.

Instruction: *All Versions:* Lectures and practical exercises in electrical fundamentals and the testing, maintenance, and repair of specific bomb navigation systems, including DC, AC, and reactive circuits, vacuum tubes and transistors, amplifiers, bombing and navigation computers, radar data presentation set, and adjustment and troubleshooting of specific equipment and components. *Version 1:* Includes power supplies, wave-shaping circuits, AM, FM, single-sideband, transmission lines and antennas, cavity resonators, oscillators, special circuits, servomechanisms, microwave principles, electrical test equipment, terrain computer, and radar fundamentals and equipment. *Version 2:* Includes power supplies, wave-shaping circuits, AM, FM, single-sideband, transmission lines and antennas, cavity resonators, oscillators, special circuits, servomechanisms, microwave principles, electrical test equipment, terrain computer, and radar fundamentals and equipment. *Version 3:* Includes oscillators, motors and servomechanisms, multivibrators and sweep circuits, microwave principles, terrain computer, timing circuits, and monopulse radar. *Version 5:* Includes transmitting and receiving and high-speed bombing radar.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 8 semester hours in electricity and electronics and credit in electronics and electrical laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 8 semester hours in electricity and electronics and credit in electronics and electrical laboratory on the basis of institutional evaluation (4/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 4:* In the upper-division baccalaureate category, 2 semester hours in electricity and electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 5:* In the upper-division baccalaureate category, 2 semester hours in electricity and electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0484

Tactical Missile Guidance Mechanic (MGM-13A)

Course Number: ABR31431M.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 35 weeks (960 hours).

Exhibit Dates: 10/64–12/68.

Objectives: To train airmen to operate, maintain, and inspect MGM-13A and TM-76A missile guidance systems and associated equipment.

Instruction: Lectures and practical exercises in electronics fundamentals and the operation, maintenance, and inspection of MGM-13A and TM-76A missile guidance systems and associated equipment, including AC and DC fundamentals, vacuum tubes and transistors, amplifiers and oscillators, motors and servomechanisms, multivibrators and sweep circuits, microwave principles, guidance system check-out equipment, ground support equipment, and troubleshooting techniques for specific guidance system equipment. Includes power supplies, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, cavity resonators, and electrical test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (4/74).

AF-1715-0485

Bomb Navigation System Mechanic (B-52C/D: ASB-15 System)

(Bomb Navigation Systems Mechanic (B-52C/D: ASB-15 System)

(Bomb Navigation System Mechanic (ASB-15 System))

Course Number: 3ABR32130L; ABR32130L.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 32–43 weeks (960–1200 hours).

Exhibit Dates: 7/63–12/73.

Objectives: To train airmen to repair the B-52C/D: ASB-15 bomb navigation system.

Instruction: Lectures and practical exercises in electronics fundamentals and the repair of the B-52 C/D: ASB-15 bomb navigation system, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, pulse circuits, circuit diagrams, data flow, radar and computer equipment, and troubleshooting techniques for specific equipment.

Credit Recommendation: In the upper-division baccalaureate category, 7 semester hours in electricity and electronics, and credit in electronics and electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0486

Weapons Control System Mechanic (F/FB-111)

(Weapons Control Systems Mechanic (F-111A))

Course Number: 3ABR32231R-4; ABR32231R.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 23–25 weeks (660–720 hours).

Exhibit Dates: 9/67–12/73.

Objectives: To train airmen in electronics fundamentals and to perform as weapon control systems mechanics.

Instruction: Lectures and practical exercises in electronics fundamentals and weapons control systems, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, binary system, Boolean algebra, digital logic and circuits, and use and maintenance of specific equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in computers, 7 in electricity or electronics, and credit in electronics and electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0488

1. Air Traffic Control Radar Repairman
2. Air Traffic Control Radar Repairman
3. Air Traffic Control Radar Repairman
4. Air Traffic Control Radar Repairman (AN/MPN-1)

Course Number: *Version 1:* 3ABR30331. *Version 2:* 3ABR30331. *Version 3:* ABR30331. *Version 4:* AB30331A.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 39–42 weeks (1170–1260 hours). *Version 2:* 42 weeks (1170 hours). *Version 3:* 44–46 weeks (1260–1290 hours). *Version 4:* 23–33 weeks (900–930 hours).

Exhibit Dates: *Version 1:* 1/70–12/73. *Version 2:* 5/68–12/69. *Version 3:* 9/59–4/68. *Version 4:* 11/54–8/59.

Objectives: To train airmen to operate, maintain, and repair air traffic control radar equipment and associated identification and test equipment.

Instruction: *All Versions:* Lectures and practical exercises in the operation, maintenance, and repair of air traffic control radar equipment and associated identification and test equipment, including DC, AC, magnetism, electron tubes and power supplies, amplifiers and oscillators, special circuits, microwave principles, radar system principles, transmitter and receiver system circuits, surveillance indicating system, precision indicator and remoting system, and components and troubleshooting procedures of specific radar systems and subsystems. *Version 1:* Includes resonance; motors; synchros; diodes; transistors; operation, function, and basic mathematical relationships of regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM systems; binary and octal numbers; logic function; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; digital techniques; transmission lines and antennas; wave-guides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; IFF and SIF systems; coding and decoding; control circuits; and communications equipment. *Version 2:* Includes resonance, motors and servomechanisms, solid-state diodes, transistors, vacuum tubes, FM, single sideband, transmission lines and antennas, discrimination, wave-shaping circuits, cavity resonators, IFF and SIF systems, coding and decoding, and control circuits. *Version 3:* Includes communications and beacon equipment. *Version 4:* Includes vacuum tubes, transistors, modulation, detection, synchros, approach indicator, and communications and beacon equipment.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in electricity or electronics, 2 in electronics laboratory, and additional credit in electronics laboratory on the basis of institutional evaluation (4/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in electricity or electronics and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74). *Version 4:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74).

AF-1715-0489

Radio Relay Equipment Repairman

Course Number: *All Versions:* 3ABR30430. *Version 3:* ABR30430.

Location: *Version 1:* School of Applied Aerospace Sciences, Keesler AFB, MS. 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 27–34 weeks (1020–1080 hours). *Version 2:* 36 weeks (990 hours). *Version 3:* 38 weeks (1050 hours).

Exhibit Dates: *Version 1:* 6/71–12/73. *Version 2:* 6/69–5/71. *Version 3:* 10/63–5/69.

Objectives: To train airmen to perform as radio relay equipment repairmen.

Instruction: *All Versions:* Lectures and practical exercises in electricity and electronics fundamentals and radio relay equipment repair including DC and AC, transistors and tubes, amplifiers and oscillators, motors, microwave principles, telegraph and telephone multiplexing, and radio relay systems. *Version 1:* Includes resonance; magnetism; synchros; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM systems; logic functions; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; digital techniques; transmission lines and antennas; transmitters; wave-guides; cavity resonators; electrical test equipment; link systems; forward propagation tropospheric scatter equipment testing; troubleshooting, alignment, and maintenance; block-diagram and circuit analysis; and line-of-sight radio terminals. *Version 2:* Includes resonance; magnetism; synchros; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM and PM systems; logic functions; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; digital techniques; transmission lines and antennas; transmitters, wave-guides; cavity resonators; electrical test equipment; link systems; forward propagation tropospheric scatter equipment testing, troubleshooting, alignment, and maintenance; block-diagram and circuit analysis; and line-of-sight radio terminals. *Version 3:* Includes reactive circuits, detection and discrimination, servomechanisms, multivibrators and sweep circuits, circuit analyses, and tactical and fixed radio relay.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74).

AF-1715-0490

Flight Facilities Equipment Repairman

Course Number: *Version 1:* 3ABR30431. *Version 2:* 3ABR30431; ABR30431.

Location: *Version 1:* School of Applied Aerospace Sciences, Keesler AFB, MS. 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 35-38 weeks (1080-1336 hours). *Version 2:* 39 weeks (1080 hours).

Exhibit Dates: *Version 1:* 6/71-12/73. *Version 2:* 9/63-5/71.

Objectives: To train airmen to operate, install, test, troubleshoot, adjust, maintain, and repair flight facilities equipment.

Instruction: *All Versions:* Lectures and practical exercises in electronics principles and the operation, installation, testing, troubleshooting, adjustment, maintenance, and repair of flight facilities equipment, including DC and AC, resonance, electron tubes and power supplies, transistors, amplifiers and oscillators, AM and FM systems, special circuits, detection and discrimination, radar beacon systems, omni-range analysis, instrument landing system analysis, and TACAN systems analysis. *Version 1:* Includes magnetism; motors; synchros; operation, functions, and basic mathematical relationships of power supplies, regulators, pulse modulation, pulsed and blocking oscillators; transmission lines and antennas; transmitters; wave-guides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; binary and octal numbers; logic function; diagrams and circuits; Boolean algebra; truth tables; counters and storage devices; and digital techniques. *Version 2:* Includes magnetism; motors; synchros; operation, function, and basic mathematical relationships of power supplies, regulators, pulse modulation, pulsed and blocking oscillators; transmission lines and antennas; transmitters; waveguides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; binary and octal numbers; logic function; diagrams and circuits; Boolean algebra; truth tables; counters and storage devices; and digital techniques.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74).

AF-1715-0491

Ground Radio Communications Equipment Repairman (Titan II)

Course Number: 3ABR30434-1.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3380th Technical School, Keesler AFB, MS.

Length: 33-37 weeks (1020-1272 hours).

Exhibit Dates: 12/68-12/73.

Objectives: To train airmen to repair ground radio communications equipment.

Instruction: Lectures and practical exercises in electricity and electronics fundamentals and ground radio communications equipment repair, including DC and AC; resonance; magnetism; motors; synchros; diodes; transistors; electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM systems; binary and octal numbers; logic function; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; digital techniques; transmission lines and antennas; transmitters; wave-guides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; HF single-sideband transceivers; intercomplex radio communications system; surveillance system; launch enable system; and associated test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74).

AF-1715-0492

Avionic Communications Specialist

Course Number: 3ABR32830.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 29 weeks (870 hours).

Exhibit Dates: 4/72-12/73.

Objectives: To train airmen to maintain and repair specialized avionics communications equipment.

Instruction: Lectures and practical exercises in electricity and electronics fundamentals and in the maintenance and repair of specialized avionics communications equipment, including AC and DC; resonance; magnetism; motors; synchros; diodes; transistors; electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM systems; binary and octal numbers; logic functions; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; digital techniques; waveguides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; command, liaison, and interphone testing and adjustment; aircraft wiring; and communications systems components.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory, 3 as an elective in electronic communications (3/74).

AF-1715-0493

DCLF Reference Measurement and Calibration

Course Number: G3AZR32470.

Location: Technical Training Center, Lowry AFB, CO.

Length: 6 weeks (230 hours).

Exhibit Dates: 4/85-Present.

Objectives: To provide training on measurement and calibration methods.

Instruction: Course trains personnel to repair, calibrate and use electronic test and measuring equipment including meters, scopes, bridges, current and voltage standards, sampling devices and signal generators.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic tests and measurements and 2 in electronic systems troubleshooting and maintenance. (11/86)

AF-1715-0494

Radio Relay Equipment Repairman (EAME)

Course Number: ABR30430-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 31-32 weeks (840-870 hours).

Exhibit Dates: 6/65-12/68.

Objectives: To train airmen to repair radio relay equipment.

Instruction: Lectures and practical exercises in electricity and electronics fundamentals and the repair of radio relay equipment, including DC and AC, resonance, magnetism, motors, synchros, diodes, transistors, and electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM modulation and demodulation systems, binary and octal numbers; logic function; truth tables; Boolean algebra; logic diagrams and circuits; digital techniques; counters and storage devices; transmission lines and antennas; transmitters; waveguides; cavity resonators; VHF, UHF, and microwave oscillators and amplifiers; electrical test equipment; multiplexing; telephone and telegraph terminal principles; transportable radio relay equipment; and associated test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory, 4 in radio engineering (4/74).

AF-1715-0495

Ground Radio Communications Equipment Repairman (WS-133A/B)

Course Number: ABR30434-2.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 31 weeks (840 hours).

Exhibit Dates: 11/65-12/68.

Objectives: To train airmen to operate, install, test, adjust and align, maintain, and repair ground communications equipment.

Instruction: Lectures and practical exercises in electricity and electronics fundamentals and the operation, installation, inspection, testing, adjustment and alignment, maintenance, and repair of ground communications equipment, including DC and AC, resonance, magnetism, motors, synchros, diodes, transistors, and electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM modulation and demodulation systems; binary and octal numbers; Boolean algebra; logic function; diagrams and circuits; truth tables; counters and storage devices; digital techniques; transmission lines and antennas; transmitters; waveguides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; receivers and transceivers;

single-sideband equipment; and associated test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (4/74).

AF-1715-0496

1. Radio Relay Equipment Technician
2. Radio Relay Equipment Maintenance Technician

Course Number: AAR30470.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 40 weeks (1200 hours). *Version 2:* 39-44 weeks (1170-1320 hours).

Exhibit Dates: *Version 1:* 1/64-12/68. *Version 2:* 1/59-12/63.

Objectives: To train enlisted personnel to install, operate, and maintain microwave, multiplex, radio relay, antrac, and carrier repeater equipment.

Instruction: *All Versions:* Lectures and practical exercises in mathematics, basic and advanced circuits, AC and DC circuit analysis, FM transmitter and receiver principles, functional analysis of receiver circuits, carrier and multiplexing systems (with emphasis on frequency and time division multiplexing), carrier telephone and telegraph terminal principles, radio relay systems, power supplies, amplifiers, wave-shaping circuits, step counters, motors and generators, tropospheric scatter, transmitters and receivers, microwave transceivers, and antennas and transmission lines.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1715-0497

1. Avionics Officer (Fighter)
2. Avionics Officer (Fighter) (Armament Systems Officer (Fighter))

Course Number: *Version 1:* 3OBR3231A-1. *Version 2:* OBR3231A-1; OB3231A.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 27-30 weeks (800-900 hours). *Version 2:* 24-36 weeks (720-1080 hours).

Exhibit Dates: *Version 1:* 1/69-12/73. *Version 2:* 3/54-12/68.

Objectives: To train officers in fire control and weapon control systems operation and management principles.

Instruction: *All Versions:* Lectures and practical exercises in electronic principles, including mathematics through trigonometry and complex numbers, AC and DC fundamentals, Thevenin's and Norton's theorems, superposition thereom, Delta-Wye transformations, vacuum tubes, gas tubes, solid-state diodes, transistors, power supplies, amplifiers, oscillators, pulse and switching circuits, servomechanisms, amplitude modulation and detection, single-sideband principles, frequency modulation and detection, receiver and transmitter principles, antennas and transmission lines, resonant cavities, microwave oscillators, lasers, integrated circuits, operations and limitations of aircraft fire control and weapons systems, and principles of management. *Version 2:* Instruction includes power supplies and amplifiers, including rectifiers, filters, amplifier principles, feedback, and phase inversion; wave-shaping circuits, including oscillators, transient circuits, clippers, clampers, multivibrators, and computer circuits.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 12 semester hours in electronics (6/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68), 3 in electricity or electronics (6/74), and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0498

Ground Communications Equipment Repairman (VHF-UHF)

Course Number: AB30432B.

Location: *Version 1:* 3380th Technical School, Keesler AFB, MS. *Version 2:* 3310th Technical School, Scott AFB, IL.

Length: 20-23 weeks (600 hours).

Exhibit Dates: 7/55-12/68.

Objectives: To train enlisted personnel to tune, operate, and maintain selected ground radio communications equipment.

Instruction: Lectures, demonstrations, and laboratory experiences in the operation and maintenance of ground radio communications equipment. Course includes basic electricity, amplifiers, power supplies, receivers, transmitters, UHF and VHF systems, and direction-finding equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory, 6 in electronics on the basis of institutional evaluation (6/74).

AF-1715-0499

Ground Communications Equipment Repairman (Heavy) Receivers

Course Number: *Version 1:* ABR30433B. *Version 2:* AB30433B.

Location: *Version 1:* 3380th Technical School, Keesler AFB, MS. *Version 2:* 3310th Technical School, Scott AFB, IL.

Length: *Version 1:* 28 weeks (750 hours). *Version 2:* 15 weeks (450 hours).

Exhibit Dates: *Version 1:* 8/58-12/68. *Version 2:* 7/55-7/58.

Objectives: To train airmen to install, maintain, repair, and operate large ground radio equipment at the apprentice level.

Instruction: *All Versions:* Lectures and practical exercises in the installation, maintenance, repair, and operation of large ground radio equipment, including analysis of specific radio, radio teletypewriter, and single-sideband receiving equipment; and testing procedures. *Version 1:* Includes electronics principles.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity, 2 in electrical laboratory, and, on the basis of institutional evaluation, 3 in radio receivers (6/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory, and 3 in radio receivers on the basis of institutional evaluation (6/74).

AF-1715-0506

Control Systems Mechanic (SM-65, 68)

Course Number: ABR31230P.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 22 weeks (570 hours).

Exhibit Dates: 6/60-12/68.

Objectives: To train enlisted personnel to perform as apprentice control system mechanics.

Instruction: Lectures and practical exercises on control systems maintenance, including fundamentals of electricity, AC and DC fundamentals, circuits, and vacuum tubes; power supplies; basic guidance and control circuits; amplifiers; transistor principles and control circuits; SM-65 operating principles, control system operating principles, flight control system component identification, location and operation, component maintenance and GSE SM-65.

Credit Recommendation: In the upper-division baccalaureate category, credit in electrical laboratory for non-electronics majors (6/74).

AF-1715-0508

Guidance Systems Mechanic (SM-65, 68)

Course Number: ABR31130P-1.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 24 weeks (630 hours).

Exhibit Dates: 6/60-12/68.

Objectives: To train enlisted personnel to maintain and repair missile guidance systems.

Instruction: Lectures and practical exercises in the repair of guidance systems, including fundamentals of electricity; fundamentals of AC and DC circuits; vacuum tubes; transformers and synchros; power supplies; basic guidance and control circuits; amplifiers; transistor principles and logic circuitry; missile inspection and maintenance system; radio guidance circuits and components; microwave transmission; and modulation and detectors.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0510

1. Aircraft Electronic Navigation Equipment Technician
2. Aircraft Electronic Navigation Equipment Maintenance Technician

Course Number: *All Versions:* AAR30171B. *Version 2:* AAR30171; AA30171.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 43 weeks (1290 hours). *Version 2:* 19-41 weeks (570-1230 hours).

Exhibit Dates: *Version 1:* 12/63-12/68. *Version 2:* 4/55-11/63.

Objectives: To train career airmen to maintain, operate, and install aircraft electronic navigation equipment.

Instruction: *All Versions:* Lectures and practical exercises in the maintenance, operation, and installation of aircraft electronic navigation equipment, including principles of DC and AC circuits; RL and RC circuits, basic electronic principles; power supplies; oscillators; wave shaping; use of multimeter and oscilloscope; functional block-diagram analysis of transmitter, RF receiver, antenna, servo, and indicator systems; basic measuring devices and test equipment; principles of airborne instruments, radar, Doppler, beacon, and Loran systems; and applied technical mathematics. *Version 1:* Includes principles of electronic digital data processing.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in shop management, 3 in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management, and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0529

1. Electronic Warfare Officer
2. Electronic Warfare Officer
3. Electronic Warfare Officer (Navigator, ECM)

Course Number: *Version 1:* B-V7C-F. *Version 2:* 51-B-V7C-A. *Version 3:* 51-B-V7C-A; ZZ3021OZ; 157105; 157104.

Location: Air Training Command, Mather AFB, CA. *Version 2:* Air Training Command, Keesler AFB, MS. *Version 3:* Air Training Command, Keesler AFB, MS.

Length: *Version 1:* 17-25 weeks (293-593 hours). *Version 2:* 28 weeks (687-699 hours). *Version 3:* 28-40 weeks (300-1088 hours).

Exhibit Dates: *Version 1:* 1/74-1/88. *Version 2:* 7/70-12/73. *Version 3:* 7/57-6/70.

Objectives: To train officers to supervise the operation, maintenance, and repair of electronic systems.

Instruction: Lectures, laboratories, and discussion sessions in basic electricity and electronics, transmission and reception, radar systems, electronic countermeasures systems, audio analysis, electronic warfare systems, and simulation training.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, semester hours in electricity, 2 in electronics, 2 in electrical laboratory (6/75). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0530

Ground Communications Equipment Repairman (Heavy) Transmitters

Course Number: *Version 1:* ABR30433A. *Version 2:* AB30433A.

Location: *Version 1:* 3380th Technical School, Keesler AFB, MS. *Version 2:* 3310th Technical School, Scott AFB, IL.

Length: *Version 1:* 32 weeks (870 hours). *Version 2:* 18 weeks (540 hours).

Exhibit Dates: *Version 1:* 8/58-12/68. *Version 2:* 8/55-7/58.

Objectives: To train enlisted personnel to install, maintain, and repair high-powered ground radio transmitters.

Instruction: Lectures and practical exercises in high-powered ground radio transmitter installation, maintenance, and repair, including AC and DC circuits, Ohm's law, RLC circuits, parallel and series combinations, motors and generators, magnetism principles, measuring instruments, tetrode and pentode circuits, amplifiers, oscillators, superheterodyne procedures, video circuits, and electronics applied to specific transmitters.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0532

Electronic Warfare Systems Specialist

(Electronic Warfare Repairman)

Course Number: 3ABR32833; 3ABR30133.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3380th Technical School, Keesler AFB, MS.

Length: 34-36 weeks (1020-1080 hours).

Exhibit Dates: 12/70-12/73.

Objectives: To train airmen to perform as electronic warfare systems specialists.

Instruction: Lectures and practical exercises in electricity and electronics fundamentals and electronic warfare systems, or in the troubleshooting and repair of electronic warfare equipment, including AC and DC; magnetism; motors; resonators; diodes; transistors; tubes; AM; FM; synchros; power supplies; wave-guides; cavity resonators; UHF and microwave oscillators; multivibrators; pulsed and blocking oscillators; transmission lines and antennas; electrical test equipment; principles of electronic warfare, radar homing and warning equipment, panoramic receiver, and UHF and VHF countermeasures transmitters; introduction to pod-contained equipment; and hydraulically tuned transmitters. Includes PM modulation and demodulation systems, binary and octal numbers, logic functions, diagrams and circuits, truth tables, Boolean algebra, counters and storage devices, digital techniques, and RF circuit analysis.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory, and, for non-electronics majors, credit in electricity or electronics on the basis of institutional evaluation (6/74).

AF-1715-0533

Airborne Early Warning Radar Specialist Principles

Course Number: 3ABR32832.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 27 weeks (810 hours).

Exhibit Dates: 2/72-12/73.

Objectives: To train airmen to operate and maintain aircraft warning and control equipment.

Instruction: Lectures and practical exercises in electricity and electronics fundamentals and the operation and maintenance of aircraft warning and control avionics equipment, including DC and AC; resonance; magnetism; motors; synchros; diodes; transistors; electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM systems; binary and octal numbers; logic function; diagrams and circuits; truth tables; Boolean algebra; counters and storage devices; digital techniques; transmission lines and antennas; transmitters; wave-guides; cavity resonators; UHF and microwave oscillators and amplifiers; electrical test equipment; search radar; gyro reference and ground position indicator systems; computer logic; digital interfacing; digital measurements and application to IFF radar systems; and data processing and display groups and control panels.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics circuits and digital design, 2 in electronics laboratory, and credit in electronic or digital laboratory on the basis of institutional evaluation (6/74).

AF-1715-0534

Ground Radio Communications Equipment Repairman

Course Number: *Version 1:* 3ABR30434. *Version 2:* 3ABR30434; ABR30434. *Version 3:* ABR30434-4. *Version 4:* ABR30434.

Location: *Version 1:* School of Applied Aerospace Sciences, Keesler AFB, MS. *Version 2:* 3380th Technical School, Keesler AFB, MS. *Version 3:* 3380th Technical School, Keesler AFB, MS. *Version 4:* 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 29-30 weeks (900-968 hours). *Version 2:* 34-37 weeks (1020-1050 hours). *Version 3:* 25 weeks (750 hours). *Version 4:* 40 weeks (1050-1110 hours).

Exhibit Dates: *Version 1:* 6/72-12/73. *Version 2:* 4/66-5/72. *Version 3:* 4/65-3/66. *Version 4:* 5/63-3/65.

Objectives: To train airmen to operate, install, inspect, adjust and align, maintain, and repair ground radio communications equipment.

Instruction: *All Versions:* Lectures and practical exercises in electronics fundamentals and the operation, installation, inspection, adjustment and alignment, maintenance and repair of ground radio communications equipment, including microwave principles, amplifiers and oscillators, and motors; UHF communications and single-sideband transmitters and receivers; recorders; digital techniques; and electrical test equipment. *Version 1:* Includes VHF communications, high-frequency receivers; DC and AC; resonance; magnetism; synchros; diodes; transistors; electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM modulation and demodulation systems; binary and octal numbers; logic functions; truth tables; Boolean algebra; logic diagrams and circuits; counters and storage devices; transmission lines and antennas; wave-guides; and cavity resonators. *Version 2:* Includes VHF communications; DC and AC; resonance; magnetism; synchros; diodes; transistors; electron tubes; operation, function, and basic mathematical relationships of power supplies, regulators, multivibrators, pulsed and blocking oscillators, AM, FM, and PM modulation and demodulation systems; binary and octal numbers; logic functions; truth tables; Boolean algebra; logic diagrams and circuits; counter and storage devices; transmission lines and antennas; wave-guides; and cavity resonators. *Version 3:* Includes detection and discrimination, servomechanisms, multivibrators and sweep circuits, and communications systems. *Version 4:* Includes AC, DC, and reactive circuits; vacuum tubes and transistors; special-purpose tubes and solid-state devices; detection and discrimination; servomechanisms; and multichannel and auxiliary equipment.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in basic electronics and communications circuits, 2 in electronics laboratory, and credit in basic electronics and communications circuits laboratory on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electronics laboratory (6/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electronics laboratory (6/74). *Version 4:* In the upper-division baccalaureate category, 2 semester hours in electronics laboratory (6/74).

AF-1715-0535

1. WEAPONS CONTROL SYSTEMS MECHANIC (F-4C/D: APQ-109/APA-165)
2. WEAPONS CONTROL SYSTEMS MECHANIC (F-4C/D: APQ-109/APA-165)
   (Weapons Control Systems Mechanic (F4, AMCS))
3. WEAPONS CONTROL SYSTEMS MECHANIC (F4, AMCS)
   (Weapons Control Systems Mechanic (AMCS-AERO-1A))

Course Number: *Version 1:* 3ABR32231P. *Version 2:* ABR32231P; 3ABR32231P. *Version 3:* ABR32231P; ABR32230P.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 27 weeks (798-916 hours). *Version 2:* 27-29 weeks (822 hours). *Version 3:* 35-37 weeks (960-1020 hours).

Exhibit Dates: *Version 1:* 1/71-12/73. *Version 2:* 8/66-12/70. *Version 3:* 7/63-7/66.

Objectives: To train airmen as weapon control systems mechanics.

Instruction: *All Versions:* Lectures and practical exercises in weapon control systems, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single-sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment; weapon control systems fundamentals; radar transmitting, receiving, antenna, and display systems; indicator control unit; radar and missile firing circuits; lead-computing optical sight systems; weapon release computing set; troubleshooting, repair, alignment, and replacement procedures; and system tie-in. *Version 3:* Includes bombing computer and transistor review.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 9 semester hours in electricity or electronics, and credit in electrical laboratory and electronics on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 9 semester hours in electricity or electronics, and additional credit in electrical laboratory and electronics on the basis of institutional evaluation (6/74). *Version 3:* In the upper-division baccalaureate category, 10 semester hours in electricity or electronics, and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0536

1. AVIONICS OFFICER (BOMBER)
2. AVIONICS OFFICER (BOMBER)
   (Armament Systems Officer, Bomber)

Course Number: *Version 1:* 3OBR3231B. *Version 2:* OB3231B; OBR3231B.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 27 weeks (810 hours). *Version 2:* 28-35 weeks (840-1050 hours).

Exhibit Dates: *Version 1:* 1/70-12/73. *Version 2:* 3/54-12/69.

Objectives: To train officers to be avionics officers.

Instruction: *All Versions:* Lectures and practical exercises in electronic principles, including mathematics (trigonometry and complex numbers), AC and DC fundamentals, Thevenin's and Norton's theorems, superposition theorem, Delto-Wye transformations, vacuum tubes, gas tubes, solid-state diodes, transistors, power supplies, amplifiers, oscillators, pulse and switching circuits, servomechanisms, amplitude modulation and detection, receiver and transmitter principles, antennas and transmission lines, resonant cavities, microwave oscillators, lasers, and integrated circuits. *Version 1:* Instruction includes bomber avionics and armament systems, including basic bomb navigation system, ASQ-38 computers and radar, defensive fire control systems, FB-111 and USAF missiles, communications and navigation systems, electronic warfare, and Strategic Air Command maintenance management. *Version 2:* Instruction includes munitions and weapons, turret systems, introduction to K-series bomb-navigation system, A-1A computer, APS-23 radar set and interconnection equipment, and nuclear weapons.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 12 semester hours in electronics, and 3 as an elective in communications systems (6/74). *Version 2:* In the upper-division baccalaureate category, 12 semester hours in electronics (6/74), 2 in shop management (12/68), and 3 as an elective in electronic communications (6/74).

AF-1715-0537

AVIONICS AEROSPACE GROUND EQUIPMENT SPECIALIST

Course Number: 3ABR32630.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO; 3415th Technical School, Lowry AFB, CO.

Length: 32-47 weeks (960-1350 hours).

Exhibit Dates: 5/70-12/73.

Objectives: To train airmen to perform as avionics aerospace ground equipment specialists.

Instruction: Lectures and practical exercises in electronics fundamentals and the maintenance, inspection, troubleshooting, repair, adjustment, and installation of aerospace ground equipment, including DC and AC fundamentals (algebra based), tubes, transistors, power supplies, amplifiers, oscillators, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, manual and semiautomatic test stations and equipment, maintenance management, computer operation, and remote control test stations.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0538

WEAPONS CONTROL SYSTEMS MECHANIC (A-7D; AN/APQ-126)

Course Number: 3ABR32231S.

Location: School of Applied Aerospace Sciences, Lowry AFB, CO; 3415th Technical School, Lowry AFB, CO.

Length: 20-23 weeks (600-690 hours).

Exhibit Dates: 11/69-2/73.

Objectives: To train airmen as weapon control systems mechanics.

Instruction: Lectures and practical exercises in weapon control systems, maintenance electronics, and electronics fundamentals, including DC and AC fundamentals, tubes, power supplies, transistors, amplifiers, oscillators, wave-shaping circuits, electrical test equipment, AM and FM; computer head-up display, and radar analysis and operation; and troubleshooting procedures. Includes single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, and digital logic and mathematics.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0540

1. DEFENSIVE FIRE CONTROL SYSTEM MECHANIC (B-52H, ASG-21 TURRETS)
2. DEFENSIVE FIRE CONTROL SYSTEMS MECHANIC (B-52H, ASG-21 TURRETS)
   (Defensive Fire Control Systems Mechanic (B-52H, B-58: MD-7, ASG-21 Turrets))
3. DEFENSIVE FIRE CONTROL SYSTEMS MECHANIC (MD-7, AN/ASG-21 TURRETS)

Course Number: *Version 1:* 3ABR32330E. *Version 2:* 3ABR32330E. *Version 3:* ABR32330E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 27 weeks (810 hours). *Version 2:* 27-29 weeks (810 hours). *Version 3:* 36 weeks (990 hours).

Exhibit Dates: *Version 1:* 3/73-1/88. *Version 2:* 7/68-2/73. *Version 3:* 4/63-6/68.

Objectives: To train airmen as defensive fire control systems mechanics.

Instruction: *All Versions:* Lectures and practical exercises in defensive fire control systems, including DC and AC fundamentals, tubes, power supplies, transistors, amplifiers, oscillators, wave-shaping circuits, AM, FM, electrical test equipment, fire control system modes data flow, transmitter and receiver, range acquisition and positioning loops and component circuits, power distribution, auxiliary equipment, maintenance ground equipment, and specific equipment operation and maintenance. *Version 1:* Includes semiconductors, computer principles (analog and digital), multivibrators, digital circuits, balanced modulation, system analysis procedures, principles of radar, and infrared and lasers. *Version 2:* Includes single sideband, transmission lines and antennas, servomechanisms, cavity resonators, and microwave principles. *Version 3:* Includes single sideband, transmission lines and antennas, servomechanisms, cavity resonators, and microwave principles.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, credit in electricity or electronics on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (6/74). *Version 3:* In the upper-division baccalaureate category, 6 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0545

1. AEROSPACE MUNITIONS OFFICER
2. NUCLEAR WEAPONS OFFICER
3. NUCLEAR WEAPONS OFFICER
4. NUCLEAR WEAPONS OFFICER
5. ATOMIC WEAPONS OFFICER

Course Number: *Version 1:* OBR4621; OB3271. *Version 2:* OBR3271. *Version 3:* OBR3271; OB3271. *Version 4:* OB3271. *Version 5:* OB3271.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 23-24 weeks (690-732 hours). *Version 2:* 24 weeks (720 hours). *Version 3:* 26 weeks (780 hours). *Version 4:* 30 weeks (900 hours). *Version 5:* 30 weeks (900 hours).

Exhibit Dates: *Version 1:* 6/63-3/68. *Version 2:* 6/60-5/63. *Version 3:* 3/58-5/60. *Version 4:* 3/56-2/58. *Version 5:* 12/55-2/56.

Objectives: To train officers to manage nuclear weapons activities.

Instruction: *Version 1:* Lectures and practical exercises in the management of aerospace munitions activities, including electronics fundamentals, explosive airmunitions, chemical and biological airmunitions, introduction to nuclear weapons, missiles and rockets, and aerospace munitions maintenance, supply, storage and handling. Includes extensive treatment of DC and AC fundamentals and tubes and transistors as part of the electronics fundamentals instruction. *Version 2:* Lectures and practical exercises in electronic principles, including mathematics through trigonometry and complex numbers, AC and DC fundamentals, Thevenin's and Norton's theorems, superposition theorem, Delto-Wye transformations, vacuum tubes, gas tubes, solid-state diodes, transistors, power supplies, amplifiers, oscillators, pulse and switching circuits, servomechanisms, amplitude modulation and detection, single-sideband principles, antennas and transmission lines, resonant cavities, microwave oscillators, lasers, integrated circuits, and atomic weapons, warheads, and operating techniques. Instruction includes large- and small-diameter weapons, TN weapons, and guided missiles. *Version 3:* Lectures and practical exercises in electronic principles, including mathematics through trigonometry and complex numbers, AC and DC fundamentals, Thevenin's and Norton's theorems, superposition theorem, Delto-Wye transformations, vacuum tubes, gas tubes, solid-state diodes, transistors, power supplies, amplifiers, oscillators, pulse and switching circuits, servomechanisms, amplitude modulation and detection, single-sideband principles, antennas and transmission lines, resonant cavities, microwave oscillators, lasers, integrated circuits, and atomic weapons, warheads, and operating techniques. Instruction includes nuclear physics; radiological detection, inspection, and transfer; site and field procedures; nuclear safety and decontamination; and descripttion and operation of three types of nuclear weapons. *Version 4:* Lectures and practical exercises in electronic principles, including mathematics through trigonometry and complex numbers, AC and DC fundamentals, Thevenin's and Norton's theorems, superposition theorem, Delto-Wye transformations, vacuum tubes, gas tubes, solid-state diodes, transistors, power supplies, amplifiers, oscillators, pulse and switching circuits, servomechanisms, amplitude modulation and detection, single-sideband principles, antennas and transmission lines, resonant cavities, microwave oscillators, lasers, integrated circuits, and atomic weapons, warheads, and operating techniques. Instruction includes nuclear physics; radiological detection, inspection, and transfer; site and field procedures; nuclear safety and decontamination; and description and operation of three types of nuclear weapons. *Version 5:* Lectures and practical exercises in electronic principles, including mathematics through trigonometry and complex numbers, AC and DC fundamentals, Thevenin's and Norton's theorems, superposition theorem, Delto-Wye transformations, vacuum tubes, gas tubes, solid-state diodes, transistors, power supplies, amplifiers, oscillators, pulse and switching circuits, servomechanisms, amplitude modulation and detection, single-sideband principles, antennas and transmission lines, resonant cavities, microwave oscillators, lasers, integrated circuits, and atomic weapons, warheads, and operating techniques. Instruction includes description, operation, maintenance, and testing of Mk 39, Mk 28, Mk 43, and Mk 53, and weapons loading procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in maintenance management (12/68). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68), and 12 in electronics (6/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68), and 12 in electronics (6/74). *Version 4:* In the upper-division baccalaureate category, 12 semester hours in electronics (6/74). *Version 5:* In the upper-division baccalaureate category, 12 semester hours in electronics (6/74).

AF-1715-0546

Weapons Control Systems Mechanic (MG-10/13 Systems)

(Weapons Control Systems Mechanic (MG-10, 13 Systems))

(Weapons Control Systems Mechanic (MG-3, 10, 13 Systems))

Course Number: 3ABR32231F-5; ABR32231F-5.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 23-34 weeks (690-930 hours).

Exhibit Dates: 4/63-12/73.

Objectives: To train airmen to perform as weapon control systems mechanics.

Instruction: Lectures and practical exercises in electronics fundamentals and weapon control systems, including DC and AC fundamentals, power generation, vacuum tubes, oscilloscopes, target detection and radar ranging, flight sensing and antenna functions, steering and tracking, timing and firing, and alignment test equipment, and testing procedures for specific weapons control systems. Includes transistors, amplifiers, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, electrical test equipment, infrared subsystem functions, and armament control.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0548

Ground Radio Officer

Course Number: OB3031A.

Location: 3310th Technical School, Scott AFB, IL.

Length: *Version 1:* 13 weeks (390 hours). *Version 2:* 19 weeks (570 hours).

Exhibit Dates: *Version 1:* 12/56-12/68. *Version 2:* 2/54-11/56.

Objectives: To train officers who have taken college-level electronics and electricity courses and who have eighteen months experience in communications to command and manage the installation, maintenance, operation, and repair of radio communications equipment and systems.

Instruction: Lectures and practical exercises in the installation, maintenance, operation, and repair of radio communications equipment and systems, including basic electricity, hand-wired communications, AM and FM transmitters and receivers, radio teletypes, antenna systems, VHF radio relays, cryptographic activities, and specific radio communications equipment systems, including teletypes, telephones, telegraphs, facsimile and television.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in electrical laboratory, and 3 in communications circuits on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in electrical laboratory, and 5 in communications circuits on the basis of institutional evaluation (6/74).

AF-1715-0549

Advanced Microwave Measurements and Calibration

Course Number: 3AZR32470-11.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 5 weeks (150 hours).

Exhibit Dates: 4/71-12/73.

Objectives: To train enlisted personnel to maintain and calibrate microwave measuring equipment.

Instruction: Lectures and practical exercises in the calibration and maintenance of microwave measuring equipment at the advanced level. Course includes discussion of transmission line principles and parameters, distributed elements, Smith chart analysis, and detection techniques. Measurements are performed to determine VSWR, frequency, and impedance, together with an assessment of accuracy, loss characteristics, and system representations. Block-diagram analysis is also included, together with detailed instructions and equipment exercises for evaluating microwave circuit performance. All standard equipment (e.g., detectors, slotted lines, reflectometers, couplers, and other accessories) is used in this course.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in microwave techniques laboratory (6/74).

AF-1715-0550

Communications-Electronics Systems Staff Officer

Course Number: 3OAR3001.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 22 weeks (660 hours).

Exhibit Dates: 1/70-12/73.

Objectives: To train commissioned officers to formulate communications-electronics policies and procedures, to coordinate policy plans and operations, and to monitor and direct programs.

Instruction: Lectures and demonstrations in communications-electronics policies and procedures. Course includes wire communications and switching, multiplexors, ground radar, air traffic control systems, communications networks, and satellite systems.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in digital computer fundamentals, and 3 in communications circuits on the basis of institutional evaluation (6/74).

AF-1715-0551

1. Electronic Intelligence

Operations Specialist
(Electronic Emission Monitor/Analysis Specialist)
2. Electronic Emission Monitor/Analysis Specialist
(Electronic Intercept Operations/Analysis Specialist)

Course Number: *All Versions:* 3ABR29430. *Version 1:* 3ABR20530. *Version 2:* ABR29430.

Location: *Version 1:* School of Applied Aerospace Sciences, Keesler AFB, MS. *Version 2:* 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 21 weeks (630 hours). *Version 2:* 24-25 weeks (630-750 hours).

Exhibit Dates: *Version 1:* 12/70-12/73. *Version 2:* 1/63-11/70.

Objectives: To train airmen as electronic emission monitor/analysis specialists.

Instruction: Lectures and practical exercises in electronic emission monitoring and analysis, including AC and DC circuits, vacuum tubes, semiconductor devices, radio fundamentals, radar principles, signal generation theory, signal generation and monitoring, receiver systems operation and procedures, mission data processing, and signal types and identification.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity, 2 in electrical laboratory, and, on the basis of institutional evaluation, 3 in electronics and 3 in signal analysis (6/74). *Version 2:* in the upper-division baccalaureate category, 3 semester hours in electricity, 2 in electrical laboratory, and, on the basis of institutional evaluation, 4 in electronics and 3 in signal analysis (6/74).

AF-1715-0554

Electronic Intercept Operations Specialist (Interim)

Course Number: ABR29230-2.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 25 weeks (660 hours).

Exhibit Dates: 2/62-12/68.

Objectives: To train enlisted personnel in intercept techniques and principles, including communications principles, camera techniques, and system function.

Instruction: Lectures and laboratories in electronic intercept operations, including countermeasures receivers, pulse analyzers, traveling-wave tubes, antennas, photographic and oscillographic recorders, magnetic recording devices, record and log procedures, and the operation of various systems components.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics (6/74).

AF-1715-0561

Ground Communications Equipment Technician (TDDL)
(Ground Communications Equipment Technician (Light)(TDDL Equipment))

Course Number: AZR30474; AZR30472.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 10 weeks (300 hours).

Exhibit Dates: 8/62-12/68.

Objectives: To train personnel in the theory, operation, and maintenance of the AN/GKA-5(V) flight control group and the AN/FRT-49 amplifier.

Instruction: Lectures and practical exercises in the theory, operation, and maintenance of the AN/GKA-5(V) flight control group and AN/FRT-49 amplifier, including Boolean algebra and binary mathematics, transistor theory, circuit and logic analysis of all components, klystron theory, tuning and adjustment, preventive maintenance procedures, system maintenance, and operation and application of associated test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in digital engineering, logic design, or electronics laboratory (6/74).

AF-1715-0564

Basic Observer Electronic Countermeasures

Course Number: ZZ302101.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 30 weeks (927 hours).

Exhibit Dates: 2/55-12/68.

Objectives: To train officers in electronic countermeasures techniques.

Instruction: Lectures and practical exercises in introductory electronic circuit theory and AC and DC fundamentals; transmitting and receiving techniques applied to specific circuits; electronic systems; search and analysis equipment operation; reconnaissance flights, jamming equipment operation and jamming flights.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (12/68).

AF-1715-0573

Flight Simulator Technician

Course Number: *Version 1:* 3AAR34270. *Version 2:* AAR34270. *Version 3:* AAR34270.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 20 weeks (600 hours). *Version 2:* 21 weeks (630 hours). *Version 3:* 36 weeks (1080 hours).

Exhibit Dates: *Version 1:* 5/68-12/73. *Version 2:* 2/66-4/68. *Version 3:* 11/60-1/66.

Objectives: To train maintenance personnel to supervise flight simulator activities, system analysis, installation and repair of flight simulators.

Instruction: *All Versions:* Lectures and practical exercises in the supervision of flight simulator activities, system analysis, installation and repair of flight simulators, including DC and AC circuit analysis, amplifier fundamentals and circuitry, power supplies, flight systems computer analysis, synchro systems, and management procedures. *Version 1:* Includes solid-state theory and devices; analog principles; passive and active computing devices; servomechanisms; flight computations; digital computer fundamentals; computer timing; programming; storage; block, flow, and logic diagrams for central processor; and peripheral systems logic. *Version 2:* Includes solid-state theory and devices; analog principles; passive and active computing devices; servomechanisms; flight computations; digital computer fundamentals; computer timing; programming; storage; block, flow, and logic diagrams for central processor, peripheral systems logic; and parallel and serial computer analysis. *Version 3:* Includes troubleshooting procedures; landing gear, hydraulic, and fuel systems; mechanical devices; engine operation; specific equipment maintenance and inspection; basic and advanced flying procedures; radio aids; and aerodynamics.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours as an elective in electronics and computers (6/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (12/68).

AF-1715-0577

Ground Radio Systems Supervisor/Technician

Course Number: 3AAR30400; AAR30490.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 46-48 weeks (1380 hours).

Exhibit Dates: 7/65-12/73.

Objectives: To train enlisted personnel as ground radio systems supervisor/technicians.

Instruction: Lectures and practical exercises in the duties of a ground radio systems supervisor/technician. Topics include applied mathematics, DC and AC circuits, vacuum tube and solid-state devices, electronic circuits, data processing, transmitters, receivers, management techniques, multiplex systems, SSB systems, UHF/VHF, ILS, omni-range systems, TACAN, digital theory, television, and missile communications systems.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68).

AF-1715-0579

Electrical Power Production Technician

Course Number: 3AAR54370; AAR54370.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 9-10 weeks (270-300 hours).

Exhibit Dates: 12/62-2/68.

Objectives: To train airmen to maintain diesel-driven generator sets, associated support equipment and control switchgear, or to maintain and operate electrical power generating equipment.

Instruction: Lectures and practical exercises in the maintenance of diesel-driven generator sets, associated support equipment and control switchgear, or the maintenance and operation of electrical power generating equipment, including maintenance management, electrical switchgear arrangements and related wiring diagrams, engine construction and operating procedures, and diesel engine systems analyses. Includes maintenance management.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1715-0587

Electronic Warfare Countermeasures Specialist
(Electronic Counter-Countermeasures Operator)
(ECCM Operator)

Course Number: ALR27332; AZR27370A-14.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 16 weeks (480 hours).

Exhibit Dates: 6/63-12/68.

Objectives: To train enlisted personnel to perform as console operators at radar sites and direction centers.

Instruction: Lectures and practical exercises to supplement the training of enlisted personnel in the duties of a console operator at radar sites and direction centers. Basic electronic principles and their application to basic radar systems, types of electronic and mechanical jamming, and electronic principles are discussed in detail, but no solid-state devices are included in the course.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0588

1. Electronics Systems Officer
   (Ground Electronics Officer)
2. Ground Electronics Officer
3. Ground Electronics Officer
   (Ground Electronics Officer (ECCM))
   (Ground Electronics Officer
   (Electronics))

Course Number: *Version 1:* 3OBR3041. *Version 2:* OBR3041; OBR3041B; OBR3041A. *Version 3:* OB3041.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 38–41 weeks (1140–1230 hours). *Version 2:* 45–49 weeks (1350–1470 hours). *Version 3:* 47–51 weeks (1410–1530 hours).

Exhibit Dates: *Version 1:* 9/68–12/73. *Version 2:* 5/62–8/68. *Version 3:* 3/54–4/62.

Objectives: To train officers to perform as ground electronics officers.

Instruction: Lectures and practical exercises in the duties of ground electronics officers, including electronics fundamentals, electronic test equipment maintenance and application, supervisory procedures, maintenance of ground radar and associated equipment, receivers and transmitters, communications systems, solid-state devices, data processing and computer principles, identification systems, and specific equipment analysis.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in basic electronics, 3 in basic electronics laboratory (6/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68), 3 in basic electronics (6/74), 3 in basic electronics laboratory (6/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in shop management (12/68), 3 in basic electronics laboratory (6/74), and 3 as an elective in basic electronics (6/74).

AF-1715-0598

Electronic Computer Systems
Repairman (EDTCC/SACCS)

Course Number: 3ABR30534B.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 32 weeks (948 hours).

Exhibit Dates: 12/71–12/73.

Objectives: To train enlisted personnel to perform the duties of an electronic computer systems repairman.

Instruction: Lectures and practical exercises in the repair of electronic computer systems, including DC and AC circuits, RLC circuits, solid-state power supplies and amplifiers, wave generation, electron tubes, computer logic, computer components, computer systems, system operation and programming, core memories, drum systems, and input-output devices.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours as an elective in digital electronics (6/74).

AF-1715-0609

Integrated Avionics Component
Specialists
(Communication/Mission and
Traffic Control and
Penetration Aids)

Course Number: 3ABR32631B.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 27–46 weeks (798–1320 hours).

Exhibit Dates: 6/70–12/73.

Objectives: To train airmen as integrated avionics component specialists.

Instruction: Lectures and practical exercises in the maintenance, assembly, disassembly, and alignment of avionics communication and traffic control devices, including mathematics and electronics principles; block-diagram analysis of system pressurization, cooling, and closed cryogenic units, and of the HF and UHF communications, airborne transponder, instrument landing approach, tactical air navigation, countermeasures receiving, track breaker, and radar homing and warning systems; central air data computer; analysis of heterodyne and other modulation schemes; microwave equipment repair; servomechanisms and infrared sensing devices; and alignment and test procedures.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0610

Weapons Control Systems Mechanic
(F-4E:APQ-120)
(Weapons Control Systems Mechanic (F-4E))

Course Number: 3ABR32231Q.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 29–33 weeks (882–912 hours).

Exhibit Dates: 8/68–12/73.

Objectives: To train airmen as weapon control system mechanics.

Instruction: Lectures and practical exercises in the duties of weapon control system mechanics, including weapons control system familiarization and system test equipment; data flow analysis of pulse transmitter and receiver sections, antenna and display systems, transmitter and radar computer functions, power distribution and missile-launching circuits, lead computing optical sight, and weapons release computer; and system tie-in, maintenance management, troubleshooting, and repair and alignment procedures.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0617

Special Training on Radar Bombing
Navigation System, AN/APQ-24A

Course Number: SS32171F-2.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 14 weeks (420 hours).

Exhibit Dates: 3/55–12/68.

Objectives: To train enlisted personnel to perform organizational and field maintenance on radar bombing navigation systems.

Instruction: Lectures and practical exercises in the maintenance of specific radar bombing navigation systems. Course includes functional analysis of various electronic devices such as the transmitter and receiver; line diagram study of oscillators, shapers, and other related equipment not involving solid-state devices; and functional analysis of tilt and rate servo drives; and familiarization with the associated mechanical and electronic hardware.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0621

Primary-Basic Navigator Upgrading

Course Number: 153103.

Location: Air Training Command, Mather AFB, CA.

Length: 26 weeks (714 hours).

Exhibit Dates: 6/56–12/68.

Objectives: To provide previously rated navigators with training in aircraft observation electronics and navigation principles.

Instruction: Lectures and practical exercises in electronics and navigation required for aircraft observation duties, including navigation, Loran and radio principles, meteorology, electricity and magnetism, AC principles, vacuum tubes, radar systems and navigation, aircraft observation equipment, and basic avionics.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in navigation, provided that no credit has previously been awarded in this field (12/68).

AF-1715-0632

Flight Facilities Equipment
Repairman (ILS)

Course Number: ABR30431B.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 28 weeks (750 hours).

Exhibit Dates: 8/58–12/68.

Objectives: To train personnel as flight facilities equipment repairmen.

Instruction: Lectures and practical exercises on the duties of flight facilities equipment repairmen, including AC and DC circuits, generators, motors, instruments, diodes, rectifiers, triodes, special-purpose tubes, transistors, amplifiers, oscillators, modulation, detection, superheterodyne receivers, multivibrators, counters, discrimination, and application to the glide slope and localizer equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electrical and electronics laboratory (6/74).

AF-1715-0634

Air Electronic Systems
Supervisor/Technician

Course Number: *Version 1:* 3AAR30100. *Version 2:* 3AAR30100. *Version 3:* AAR30190.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 44 weeks (1320 hours). *Version 2:* 46 weeks (1320 hours). *Version 3:* 50 weeks (1440 hours).

Exhibit Dates: *Version 1:* 4/71–12/73. *Version 2:* 11/67–3/71. *Version 3:* 6/65–10/67.

Objectives: To train airmen to be air electronic systems supervisors or technicians.

Instruction: Lectures and practical exercises in advanced electronic principles; operational analysis of aircraft electronic systems; analysis and use of test equipment; maintenance data analysis for recognition and solution of maintenance problems; and supervision, administration, and management of maintenance activities.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68), and 2 in electrical laboratory (6/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in maintenance management (12/68), and 2 in electrical laboratory (6/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in maintenance management (12/68), and 2 in electricity or electronics (6/74).

AF-1715-0635

DEFENSE MISSILE GUIDANCE MECHANIC—FALCON (AIM)
(Defense Missile Guidance Mechanic (GARS))
(Guidance Systems Mechanic (GARS))
(Guidance Systems Mechanic (GAR-1/2/3))

Course Number: ABR31131W; ABR31130E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 25–30 weeks (660–810 hours).

Exhibit Dates: 12/59–12/68.

Objectives: To train enlisted personnel to repair Falcon missile guidance systems.

Instruction: Lectures and practical exercises in AC and DC circuit analysis, reactive elements, vacuum tubes and transistors, amplifiers and oscillators, missile hazard reporting, publications and maintenance management, block-diagram analysis, power supply functions, armament propulsion, missile assembly and disassembly, test and ground support equipment, nuclear safety, inspection procedures, and trouble analysis and repair. Instruction includes AC and DC fundamentals, tubes, transistors, power supplies, regulators, amplifiers, oscillators, wave-shaping circuits, AM and FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, hand tools operation, multimeters, oscilloscopes, and microwave principles.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics, and additional credit in electronics on the basis of institutional evaluation (3/74). (3/74).

AF-1715-0637

MISSILE FACILITIES SPECIALIST

Course Number: 3ABR54130G.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL.

Length: 19 weeks (570–710 hours).

Exhibit Dates: 11/72–12/73.

Objectives: To train enlisted personnel in the duties of missile facilities specialists.

Instruction: Lectures and practical exercises in the duties of missile facilities specialists. Course includes principles of electricity, pneudraulics, and hydraulics; operation, inspection, and maintenance of missile facilities, hydraulic and pneudraulic systems, water and sewage systems, air conditioning and cooling systems, electrical power generation systems, and power distribution systems; use of tools and technical publications; and safety and security procedures.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical and mechanical laboratory (6/74).

AF-1715-0638

MISSILE OFFICER TM-76B
(Missile Maintenance Officer TM-76B)

Course Number: OBR3121H; OBR3121B-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 27 weeks (810 hours).

Exhibit Dates: 12/60–12/68.

Objectives: To train commissioned officers to maintain missile guidance systems.

Instruction: Lectures and practical exercises in the maintenance of guided missile systems. Course includes basic electricity, motors and generators, control systems, power supplies, amplifiers and oscillators, servomechanisms, inertial guidance fundamentals, and test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hours in electrical laboratory (6/74).

AF-1715-0641

MISSILE ELECTRONIC EQUIPMENT SPECIALIST (CGM-13B, TEMS)
(Tactical Missile Checkout Equipment Repairman (CGM-13B TEMS))
(Tactical Missile Checkout Equipment Repairman (MACE MGM-13C/TEMS))
(Tactical Missile Checkout Equipment Repairman (TM-76B, TEMS))

Course Number: 3ALR31652N; ALR31652N; ALR31434N.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 18–31 weeks (540–930 hours).

Exhibit Dates: 9/61–12/73.

Objectives: To train maintenance personnel to operate, maintain, and repair specific missile electronic test equipment.

Instruction: Lectures and practical exercises in missile electronic test equipment operation and maintenance, including electronic circuit analysis, flight controls and inertial guidance system, maintenance and launch areas aerospace ground equipment, verification and calibration, test equipment maintenance set, and specialized electronics.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0642

MISSILE SPECIALIST (TM-61C)
(Missile Mechanic (TM-61A/C))

Course Number: ABR43330A.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 17 weeks (480 hours).

Exhibit Dates: 9/58–12/68.

Objectives: To train personnel as missile specialists.

Instruction: Lectures and practical exercises in the duties of missile specialists, including fundamentals of guided missiles; missile structures and materials; aerodynamics, mechanics, and basic physics; propulsion system; fuels, oxidizers, and lubricants; 60-kw generator and engine console; missile systems; systems assembly and disassembly; power plant and missile check-out; launch procedures; missile transfer; and countdown.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in mechanical (fluids) laboratory (6/74).

AF-1715-0646

TACTICAL MISSILE CHECKOUT EQUIPMENT REPAIRMAN (MGM-13B(TEMS))
(Tactical Missile Checkout Equipment Repairman (TM/76A/TEMS))
(Missile Test Equipment Specialist (TM-76A))

Course Number: ALR31434M; ALR31530F.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 18–23 weeks (540–690 hours).

Exhibit Dates: 9/61–12/68.

Objectives: To train airmen to perform as tactical missile check-out equipment repairmen.

Instruction: Lectures and practical exercises in tactical missile check-out equipment repair, including MGM-13B weapon system, specialized electronics, calibration test equipment, flight control system and check-out equipment, flight controls check-out equipment calibration, guidance system and its check-out equipment calibration, missile preflight tester calibration, and launch area check-out equipment. Includes practical exercises on the function of missile test equipment specialist, including TM-76A weapon system, calibration van, basic missile checker calibration, guidance system test set and calibration, missile preflight tester and calibration, and FCT and RFT calibration.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory for non-electrical engineering majors (6/74).

AF-1715-0647

1. MISSILE OFFICER TM-76A
2. GUIDED MISSILE MAINTENANCE OFFICER TM-76A

Course Number: *Version 1:* OBR3121G. *Version 2:* OBR3121B-1.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 27 weeks (810 hours). *Version 2:* 25 weeks (750 hours).

Exhibit Dates: *Version 1:* 5/61–12/68. *Version 2:* 12/60–4/61.

Objectives: To train officers to perform as guided missile maintenance officers (TM-76A).

Instruction: *Version 1:* Lectures and practical exercises in the functions of guided missile maintenance officers, including air weapons management; fundamentals of electricity and alternating current; vacuum tubes and amplifiers; oscillators and wave shaping; weapon, propulsion, flight control, and guidance systems; missile preflight test pack; support area operations; and nuclear weapons orientation. *Version 2:* Lectures and practical exercises in the functions of missile officers, including maintenance management; electricity; electron tubes; amplifiers; wave forming; transmission; radar; missile equipment; power plant, flight controls, guidance systems; system recycle vehicle; missile launch pack; and nuclear weapons orientation.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity and electronics (6/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity and electronics (6/74).

AF-1715-0648

Guidance Systems Officer (Surface-to-Surface) (TM-61C)
(Guidance Systems Officer)
(Pilotless Aircraft Guidance and Control Officer)

Course Number: OB3221C-1; OB3221.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 26-32 weeks (780-960 hours).

Exhibit Dates: 4/54-12/68.

Objectives: To train officers to perform as guidance systems officers.

Instruction: Lectures and practical exercises on the functions of guidance systems officers, including air armament management, fundamentals of electricity, alternating current principles, oscillators and principles of receiving and transmission, radar system components, modern guided missiles and the MARC,ATRAN, and Command guidance systems, ground station guidance, and airborne controls and guidance equipment. Includes oscilloscope analysis; radar system components; airborne shanicle guidance; and superheterodyne receiver and sweep generator. Includes the function of pilotless aircraft guidance and control officers, vacuum and gas-filled tubes, power supplies, and voltage regulators; transmission, and fundamentals tie-in; and B-61A command guidance and controls system and check-out.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in radio and electronics (6/74).

AF-1715-0649

1. Missile Systems Maintenance Specialist (AGM-28)
   (Missile Guidance and Control Specialist (AGM-28))
2. Missile Systems Maintenance Specialist (AGM-28)
   (Missile Guidance and Control Specialist (AGM-28A/B))
3. Air Launch Missile Guidance Mechanic (AGM-28A/B)
4. Air Launch Guidance Mechanic (AGM-28A/B)
   (AGM Guidance Mechanic (AGM-28A/B))
   (GAM Guidance Mechanic, GAM-77)

Course Number: *Version 1:* 3ABR31631Q. *Version 2:* 3ABR31631Q; ABR31631Q; ABR31531Q. *Version 3:* ABR31531Q. *Version 4:* ABR31531Q.

Location: 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 30 weeks (1144 hours). *Version 2:* 30-36 weeks (900-990 hours). *Version 3:* 42-44 weeks (1170-1230 hours). *Version 4:* 33 weeks (900 hours).

Exhibit Dates: *Version 1:* 6/73-12/73. *Version 2:* 11/66-5/73. *Version 3:* 12/62-10/66. *Version 4:* 10/61-11/62.

Objectives: To train technicians to operate and maintain the AGM-22 missile guidance system.

Instruction: *All Versions:* Lectures and practical exercises in AC and DC circuits, resonance, introduction to magnetism, AC and DC motors and synchros, electron tubes, power supplies, regulators, multivibrators, blocking oscillators, AM modulation and demodulation, transmission lines, antennas, transmitters, wave-guides, cavity resonators, UHF and microwave oscillators and amplifiers, use of the oscilloscope in circuit measurement, and operation, maintenance, alignment, troubleshooting, and repair of AGM-22 missile guidance system and associated equipment. *Version 1:* Instruction includes diode and transistor circuits, digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, and storage devices, flight control systems, computer test set, verdan digital computer, and autonavigation component test set operation, alignment and calibration. *Version 2:* Instruction includes solid-state devices (emphasis on tube-type audio, push-pull, and video amplifiers), servo and magnetic amplifiers, oscillators, missile familiarization, bench test equipment, flight control package circuitry and check-out, computer test set, verdan digital computer, and guidance system and test set certification. *Version 3:* Instruction includes solid-state devices (emphasis on tube-type audio, push-pull, and video amplifiers), servo and magnetic amplifiers, oscillators, package check-out, guidance component theory and system check-out, autonavigator component test set, special test equipment, computer test set, and printed circuit card tester. *Version 4:* Instruction includes guidance system familiarization, computer logic expressions and circuitry, verdan computer, digital computer control panel, and application of optical equipment.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour as a technical elective in electrical laboratory for non-electrical engineering majors (6/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour as an technical elective in electrical laboratory for non-electrical engineering majors (6/74). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (6/74). *Version 4:* In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0650

1. Defense Missile Guidance Technician (GAR-1/2/11)
   (Guidance Systems Technician (GAR-1/2/11))
   (Guidance Systems Technician (GAR-1/2))
   (Guidance Systems Technician (GAR-1))
2. Guidance Systems Technician (GAR-1)

Course Number: *All Versions:* AAR31171W. *Version 1:* AAR31170E; AA31170E. *Version 2:* AL31130E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 13-18 weeks (390-540 hours). *Version 2:* 26 weeks (780 hours).

Exhibit Dates: *Version 1:* 9/57-12/68. *Version 2:* 10/55-8/62.

Objectives: To train enlisted personnel to test and maintain the GAR-1 missile guidance system.

Instruction: Lectures and practical exercises in GAR-1 missile guidance system testing and maintenance, including radar circuitry, vacuum tubes, hydraulic systems, block-diagram analysis, signal-flow analysis, guidance unit theory of operation, malfunction procedures and exercises, and electronic fundamentals.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in electronics laboratory (6/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in electronics laboratory (6/74).

AF-1715-0651

Missile Launch/Missile Officer (ATLAS PGM-16E)
(Missile Launch/Missile Officer (SM-65E))

Course Number: OZR1821C; OZR3121C; OZR1821B; OZR3121B-1.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 7 weeks (210 hours).

Exhibit Dates: 12/62-12/68.

Objectives: To train officers to operate and maintain the 107A weapon system (Atlas).

Instruction: Lectures and practical exercises in the operation and maintenance of the 107A weapon system (Atlas), including principles of Atlas subsystems; launch complex facilities; associated aerospace ground equipment; operational analysis of electrical power production and distribution; and electrical propulsion, autopilot, guidance, and hydraulics systems.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0653

Instrument Trainer Specialist (C-11)
(Electronic Instrument Trainer Specialist (C-11 Type))

Course Number: ABR34131A; AB34141A.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 30-34 weeks (810-930 hours).

Exhibit Dates: 12/54-12/68.

Objectives: To train maintenance technicians to service electronic equipment.

Instruction: Lectures and practical exercises in electronic equipment servicing, including aerodynamics and flight principles, electrical and electronic principles, use of electronic measuring instruments, circuit analysis and troubleshooting procedures, engine systems, and radio aids.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0657

Tactical Missile Launch Specialist (CGM-13B)
(Tactical Missile Launch Specialist (Mace, MGM-13C))
(Tactical Missile Launch Specialist (TM-76B))

Course Number: ABR31433N.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 23-25 weeks (600-660 hours).

Exhibit Dates: 9/61-12/68.

Objectives: To train airmen to perform as Mace and TM-76B tactical missile launch specialists.

Instruction: Lectures and practical exercises in the duties of TM-76B tactical missile launch specialists, including electronic fundamentals; direct current; use of meters; series resistance; parallel resistive circuits; series-parallel resistance and bridge circuits; generation of AC and DC voltages; frequency spectrum; inductance, capacitance, reactance, impedance and transformers; alternating current; reactive circuits; series and parallel RC, RL, and RCL circuits and resonance; vacuum tubes and solid-state devices; and amplifiers and oscillators.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0658

Missile Launch Officer (CGM-13B)
(Missile Launch Officer (MACE, MGM-13C))
(Missile Launch Officer (TM-76B))
(Missile Launch Officer (TM-76B))
(Guided Missile Operations Officer (TM-76B))

Course Number: OBR1821N, OBR1821C-2; OBR1821-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 18-19 weeks (540-570 hours).

Exhibit Dates: 12/60-12/68.

Objectives: To qualify officers as MGM-13C missile launch officers or TM-76B guided missile operations officers.

Instruction: Lectures and practical exercises in operation and supervision of MGM-13C MACE tactical missile launch activities, and in the duties of TM-76B guided missile operations officers, including electronic principles; MGM-13C weapon system, missile systems, flight controls, and inertial guidance; LAGG principles; launch familiarization; launch area operations and maintenance; guided missile operations fundamentals; vacuum tubes and circuits; servos controllers; introduction to TM-76B missile systems, flight controls; and inertial guidance; and nuclear weapons orientation.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (6/74).

AF-1715-0663

Missile Launch/Missile Officer (Ballistic Missiles)
(Guided Missile Operations/Maintenance Officer (Ballistic Missiles))

Course Number: OBR1821; OBR3121-3; OBR1821B.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 7-12 weeks (210-360 hours).

Exhibit Dates: 12/60-12/68.

Objectives: To train officers in missile skills as a prerequisite to specialized training in Atlas and Titan missile support.

Instruction: Lectures and practical exercises in missile skills, including missile fundamentals, pneudraulic principles, electrical and electronic fundamentals, guidance systems, and test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0666

Tactical Missile Launch Specialist (MGM-13A)

Course Number: ABR31433M.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 16-26 weeks (438-690 hours).

Exhibit Dates: 5/64-12/68.

Objectives: To train enlisted personnel to operate, maintain, and perform check-out procedures on TM-76A missile systems and associated launch area check-out equipment.

Instruction: Lectures and practical exercises in electronics fundamentals and the operation, maintenance and check-out of TM-76A missile systems and associated launch area check-out equipment, including AC and DC; tubes and transistors; amplifiers and oscillators; principles of missile systems; flight control system; guidance radar system; ground equipment; power distribution; communications systems; and specific equipment components and systems. Includes power supplies, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, and electrical test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electricity and electronics and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0667

Tactical Missile Launch Specialist (MGM-13A)

Course Number: ALR31433M; ALR31453M.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 15-23 weeks (438-690 hours).

Exhibit Dates: 5/64-12/68.

Objectives: To train enlisted personnel to operate, maintain, and perform check-out procedures on TM-76A missile systems and associated launch area check-out equipment.

Instruction: Lectures and practical exercises in electronics fundamentals and the operation, maintenance, and check-out of TM-76A missile systems and associated launch area check-out equipment, including AC and DC; tubes; transistors; amplifiers and oscillators; principles of missile systems; flight control system; guidance radar system; ground equipment; power distribution; communications systems; and specific equipment components and systems. Includes power supplies, wave-shaping circuits, AM, FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, microwave principles, and electrical test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0668

Missile Systems Analyst Specialist (TM-76B)

Course Number: ABR31430G.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 23 weeks (600 hours).

Exhibit Dates: 2/60-12/68.

Objectives: To train basic airmen as apprentice TM-76B missile systems analyst specialists.

Instruction: Lectures and practical exercises in missile systems analysis, including DC, AC and reactive circuits, vacuum tubes and transistors, amplifiers and oscillators, motors and generators, inertial guidance fundamentals, power supplies, flight controls and gyroscopes, test set operation, launch area equipment operation, and troubleshooting techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (6/74).

AF-1715-0671

1. Missile Guidance and Control Specialist (AIM) (ADC)
2. Missile Guidance and Control Specialist (AIM)

Course Number: *Version 1:* 3ABR31631L-2. *Version 2:* ABR31631L-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 21-27 weeks (642-780 hours). *Version 2:* 28 weeks (810 hours).

Exhibit Dates: *Version 1:* 2/68-12/73. *Version 2:* 7/66-1/68.

Objectives: To train enlisted personnel to be missile guidance and control specialists.

Instruction: Lectures and practical exercises in electronic principles, including AC and DC circuit theory, Ohm's law, Kerchoff's law, transistors, vacuum tubes, basic rectifiers, oscillators, and wave-shaping circuits; and missile guidance systems, including circuit analysis, test equipment operation and calibration, missile check-out equipment, ground support equipment, and troubleshooting procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electronics laboratory, and credit in electronics on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in electronics laboratory, and additional credit in electronics on the basis of institutional evaluation (6/74).

AF-1715-0672

Guidance and Control Officer (RIGS) (HGM-25A)
(Guidance and Control Officer (RIGS) (SM-68A))
(Guidance Control Officer (RIGS) (SM-68))

Course Number: OZR3044-6; OZR3044D; OTS3044-4.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 15 weeks (450 hours).

Exhibit Dates: 4/61-12/68.

Objectives: To train guidance control officers in the operation, maintenance, and logistics of the Titan I ground guidance system.

Instruction: Lectures and practical exercises in the operation, maintenance, and applicable logistics of the Titan I ground guidance system, including missile familiarization, computer fundamentals (digital computers, Boolean algebra, digital electronics, basic programming), computer control and storage, input/output power, ground equipment, data flow, guidance radar, and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in data processing or computer principles (12/68).

AF-1715-0677

Electronic Computer Repairman BUIC AN/GSA-51A

Course Number: 3ABR30533C.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 42 weeks (1200 hours).

Exhibit Dates: 8/70-12/73.

Objectives: To train enlisted personnel to repair computer systems.

Instruction: Lectures and practical exercises in the repair of computer systems. Course includes computer system operation, memory function, timing, and logic; programming and machine language; hardware routines and basic instructions, input-output timing, and tape and drum systems; and troubleshooting.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in digital technology on the basis of institutional evaluation (7/74).

AF-1715-0683

Weather Equipment Superintendent

Course Number: AAR30290; AA25100.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 19–28 weeks (570–840 hours).

Exhibit Dates: 3/55–12/68.

Objectives: To train weather equipment supervisors and technicians to perform as weather equipment superintendents.

Instruction: Lectures and practical exercises in the installation, maintenance, and operation of meteorological equipment, including electrical mathematics, theory and application of meteorological measurements, staff technical writing and composition, advanced electronics, current weather equipment, maintenance and installation management, and site surveying and installation of equipment. Topics include mathematics, advanced radar component circuit analysis, advanced radar circuit analysis, telemetering systems and familiarization with specific new weather equipment, administrative practices, and site surveying.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in business and management (12/68).

AF-1715-0687

Aircraft Control and Warning
Radar Repairman

Course Number: *Version 1:* 3ABR30332. *Version 2:* 3ABR30332; ABR30332. *Version 3:* ABR30332.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 35–37 weeks (1050 hours). *Version 2:* 39–41 weeks (1162–1170 hours). *Version 3:* 44–45 weeks (1230–1260 hours).

Exhibit Dates: *Version 1:* 6/71–12/73. *Version 2:* 2/64–5/71. *Version 3:* 5/59–1/64.

Objectives: To train airmen to perform as aircraft control and warning radar repairmen.

Instruction: *All Versions:* Lectures and practical exercises in the duties of aircraft control and warning radar repairmen and in electronic principles, including DC and AC circuits, magnetism, resonance, diodes, transistors and solid-state systems, vacuum tubes, amplifiers and oscillators motors, multivibrators, microwave principles, receiver principles, cavity resonators, UHF and microwave oscillators, electrical test equipment, various modulation and demodulation systems, transmission lines, synchros, pulsed and blocking oscillators, regulators, radar principles, transmitters, antenna positioning and indicator systems, and systems maintenance and associated equipment. *Version 1:* Includes binary and octal numbers, truth tables, Boolean algebra, logic function diagrams, circuits, counters and storage devices, magnetron transmitters and linear receivers, Klystron transmitter, clutter elimination, and identification systems. *Version 2:* Includes clutter elimination and special-purpose tubes. *Version 3:* Includes reactive circuits, special-purpose tubes, principles of IFF and coder systems, and SIF passive and active systems.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in electronic instrumentation laboratory, 1 in electronics laboratory (6/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in electronic instrumentation laboratory (6/74). *Version 3:* In the upper-division baccalaureate category, 3 semester hours as a technical elective in electronics for non-engineering majors, or 2 in electricity or electronic laboratory (6/74).

AF-1715-0688

Fire Control Systems Mechanic (MA-7
System)

Course Number: AB32230K.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 32 weeks (870 hours).

Exhibit Dates: 8/57–12/68.

Objectives: To train airmen to operate, troubleshoot, maintain, and repair the MA-7 fire control systems installed in the F-101 aircraft.

Instruction: Lectures and practical exercises in fire control system maintenance, including fundamentals of electricity; amplifiers, oscillators, and sweep generators; radar principles; servomechanism principles; general operation and service section; transmitter and receiver; video and range loops; antenna-positioning loop; sight and attack display; bombing computers; MA-7 fire control system tie-in; and field exercises.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical or electronics laboratory (6/74).

AF-1715-0689

Weapons Control Systems Mechanic
(E-9, MG-12 Systems)

Course Number: AL32231E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 23 weeks (690 hours).

Exhibit Dates: 3/58–9/60.

Objectives: To train personnel as weapons control systems mechanics for the E-9 and MG-12 systems.

Instruction: Lectures and practical exercises in weapons control systems repair, including introduction to channel B; service function; intelligence gathering; antenna positioning; computer; optics and self-tests; fighter missile system; system tie-in; and field exercises.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hours in electrical laboratory (6/74).

AF-1715-0690

1. Weapons Control Systems
Mechanic (MG-12 System)
2. Weapons Control Systems
Mechanic (E-9 System)
(Weapons Control Systems Mechanic
(E-9, MG-12 Systems))

Course Number: *Version 1:* ABR32231E-2. *Version 2:* ABR32231E-1; AB32231E.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 37–39 weeks (1110–1170 hours). *Version 2:* 42 weeks (1170 hours).

Exhibit Dates: *Version 1:* 10/60–12/68. *Version 2:* 8/57–9/60.

Objectives: To train personnel as weapons control systems mechanics for the E-9 and MG-12 systems.

Instruction: Lectures and practical exercises in weapons control systems repair, including fundamentals of electricity; fundamentals of AC and DC; vacuum tubes and power supplies; amplifiers, oscillators and sweep generators; radar principles; servomechanism principles; introduction to channel B; service function; intelligence gathering; antenna positioning; computer; optics and self-tests; fighter missile system; system tie-in; reactive circuits; special circuits; microwave operation; timing and firing function; attack steering function; attack display function; optical steering and tracking; field exercises; and system troubleshooting.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in electrical laboratory (6/74).

AF-1715-0692

Missile Launch Officer, LGM-25
(Missile Launch/Missile Officer (LGM-25))

Course Number: 3OBR1821F, 3OBR3121F; OBR3121F; OBR1821F.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 13–14 weeks (378–420 hours).

Exhibit Dates: 8/66–12/73.

Objectives: To train officers in Titan II missile systems support.

Instruction: Lectures and practical exercises in Titan II missile systems support, including ballistic missile theory, weapon system familiarization, electronic principles (DC, AC, components theory), inertial guidance principles, guidance systems, propulsion, flight control and hydraulic systems, systems integration, launch control operation and troubleshooting, facility pneudraulics and associated equipment, various missile subsystems, and power generation and distribution. Includes communications system and components.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electrical laboratory (6/74).

AF-1715-0693

Missile Mechanic (AGM-28A/B)
(Missile Mechanic (GAM-77))

Course Number: 3ABR44330Q; ABR44330Q-1; ABR44330Z-1; ABR43330-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 18–23 weeks (510–600 hours).

Exhibit Dates: 4/61–12/73.

Objectives: To train enlisted personnel to maintain the AGM 28A/B missile.

Instruction: Lectures and practical exercises in the maintenance of the AGM 28A/B missile, including missile mechanics, electrical and electronic fundamentals, maintenance management, missile hydraulic systems, fundamentals of jet propulsion, and planned inspections.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in electronics, 2 in hydraulics, and 2 as an elective in vocational/technical programs (7/74).

AF-1715-0696

Ground Communications Equipment
Repairman (Light)

Course Number: ABR30432.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 32–38 weeks (870–1050 hours).

Exhibit Dates: 9/58–12/68.

Objectives: To train enlisted personnel to operate, adjust, maintain, and repair low-power ground communications equipment.

Instruction: Lectures and practical exercises in electronic principles, circuit analysis, UHF and HF transmitters and receivers, radio teletype, direction finding, TV systems and associated test equipment, vacuum tube and transistor principles, multichannel tranceivers, and communications systems. Instruction is descriptive rather than analytical.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in electronics, and credit in electrical laboratory on the basis of institutional evaluation (12/68).

AF-1715-0699

WEAPONS CONTROL SYSTEMS TECHNICIAN (MG-13 DATA FLOW)

Course Number: AAR32271F-2.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 29 weeks (870 hours).

Exhibit Dates: 11/58–12/68.

Objectives: To train enlisted personnel to troubleshoot and repair weapons control systems; repair and harmonize weapons control systems; perform weapons control systems inspections; and supervise weapons control systems personnel.

Instruction: Lectures and practical exercises in the maintenance, inspection, and repair of weapons control systems. Course includes fundamentals of electronics, systems and computer self-tests, power generation and distribution, radar ranging function, antenna positioning, flight sensing function, and ballistic functions.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in basic electronics (7/74).

AF-1715-0701

ELECTRONIC DIGITAL DATA PROCESSING EQUIPMENT REPAIRMAN (BALLISTIC MISSILE GUIDANCE COMPUTER) (SM-65D)

Course Number: ABR30531E-1.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 38 weeks (1050 hours).

Exhibit Dates: 9/61–12/68.

Objectives: To train enlisted personnel to operate, maintain, and repair the AN/GSQ-33 ground guidance digital computer and specialized computer test equipment.

Instruction: Lectures and practical exercises in the AN/GSQ-33 ground guidance digital computer and specialized computer test equipment operation, maintenance, and repair, including program, memory, and arithmetic units; inputs, outputs, simulator, and printer; computer checks and troubleshooting; test console; plug-in unit test set and power supply tester; and computer and package troubleshooting. Additional instruction in electronic fundamentals for digital data processing equipment repairmen, including DC electrostatic principles through series-parallel circuits; AC principles through series-parallel resonant circuits; motors; saturable reactors; magnetic amplifiers; servos, synchros, and servo amplifiers; fundamentals of tubes and transistors; rectifiers; filters; time constants; power supplies; voltage regulators; soldering techniques; triodes; tetrodes; pentodes; transistors; special-purpose tubes; amplifiers and oscillators, including blocking oscillators, passive and active limiters, clampers, and amplifier circuits; synchroscope; transients; shock-excited Hartley, Astabel, oneshot, and bistabe multivibrators; thyratron, sawtooth, trapezoidal, and transistor sweep circuits; computer circuits and computing techniques; binary, octal, and binary excess-three codes; computer history, AN-OR gates, matrices, Boolean algebra, logic generators, and associated circuits; special-purpose amplifiers and gating circuits; counters, count detection, decoders, encoders, registers; conversion circuits, memory circuits and storage devices; input/output devices; and coding principles.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in electricity or electronics (4/74).

AF-1715-0705

GROUND RADIO REPAIRMAN

Course Number: AB30430.

Location: 3310th Technical School, Scott AFB, IL.

Length: 33 weeks (960 hours).

Exhibit Dates: 12/54–12/68.

Objectives: To train airmen to operate, maintain, and repair ground radio and related navigational equipment.

Instruction: Lectures and practical exercises in the operation, maintenance, and repair of ground radio and related navigational equipment, including basic radio electronics, electron tubes, receivers and transmitters, circuit applications, pulse techniques, air traffic control, radio relay equipment, point-to-point communications, and teletype and teletypewriter equipment.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory on the basis of institutional evaluation (7/74).

AF-1715-0706

1. FLIGHT SIMULATOR SPECIALIST
2. FLIGHT SIMULATOR SPECIALIST
3. FLIGHT SIMULATOR SPECIALIST
4. FLIGHT SIMULATOR SPECIALIST
5. FLIGHT SIMULATOR FUNDAMENTALS

Course Number: *Version 1:* 3ABR34230. *Version 2:* 3ABR34230. *Version 3:* ABR34230. *Version 4:* ABR34230. *Version 5:* AF34220.

Location: *Version 1:* School of Applied Aerospace Sciences, Chanute AFB, IL. *Version 2:* 3345th Technical School, Chanute AFB, IL. *Version 3:* 3345th Technical School, Chanute AFB, IL. *Version 4:* 3345th Technical School, Chanute AFB, IL. *Version 5:* 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 32 weeks (1230 hours). *Version 2:* 32 weeks (960 hours). *Version 3:* 35-36 weeks (960-990 hours). *Version 4:* 23 weeks (600 hours). *Version 5:* 25 weeks (750 hours).

Exhibit Dates: *Version 1:* 7/73–12/73. *Version 2:* 8/72–6/73. *Version 3:* 7/65–7/72. *Version 4:* 12/59–6/65. *Version 5:* 2/54–11/59.

Objectives: To train airmen to perform as flight simulator specialists.

Instruction: *All Versions:* Lectures and practical exercises in the maintenance and repair of flight simulators, including AC and DC circuits, electron tubes, servo systems, power supplies, amplifiers and oscillators; principles and applications of aerodynamics; radio procedures; navigation; engine systems; troubleshooting procedures; and flight simulator operation, components, and test equipment. *Version 1:* Includes missile systems fundamentals, electrical circuits, inspection, and maintenance; vacuum tube and transistor circuits; basic digital computers; missile airborne motor operation and check-out, generators, frequency controllers and servo systems, radio guidance principles, and inertial guidance; motors and synchros; velocities, rates, and angles; soldering; digital computer mathematics and logic devices, Boolean algebra, input/output devices, programming principles, general purpose computer, and radar and closed-circuit TV principles and applications to flight simulators. *Version 2:* Includes diodes and transistor circuits, resonance, introduction to magnetism, motors and synchros, multivibrators, blocking oscillators, AM systems, transmission lines and antennas, transmitters, wave-guides, cavity resonators, and UHF and microwave equipment; digital techniques; binary and octal numbers; logic functions; Boolean algebra; logic diagrams; circuits; counters and storage devices; programming principles; input/output devices; jet engine computer theory; velocities, rates, and angles; maintenance management; and radar and closed-circuit TV principles and applications to flight simulators. *Version 3:* Includes resonance, introduction to magnetism, motors and synchros, multivibrators, blocking oscillators, AM systems, transmission lines and antennas, transmitters, wave-guides, cavity resonators, UHF and microwave equipment; computer mathematics (rate and functions), digital computer logic and circuit diagrams; maintenance management; and radar and closed-circuit TV principles and applications to flight simulators. *Version 4:* Includes motors and generators, special-purpose tubes, and computer circuits. *Version 5:* Includes special circuits, synchros, and magnetism.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in computer fundamentals, 3 in electricity or electronics, 1 in electrical laboratory (7/74). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in electrical or electronics laboratory (7/74). *Version 3:* In the upper-division baccalaureate category, 1 semester hour in electrical or electronics laboratory, 1 in analog and digital computer fundamentals, 1 as a technical elective in applied mathematics (7/74). *Version 4:* in the upper-division baccalaureate category, 1 semester hour in electrical laboratory (7/74). *Version 5:* in the upper-division baccalaureate category, 1 semester hour in electrical laboratory (7/74).

AF-1715-0708

FIRE CONTROL SYSTEMS MECHANIC (MG-10 SERIES DATA FLOW SPECIALIST)

Course Number: AB32231.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 36 weeks (1080 hours).

Exhibit Dates: 1/56–12/68.

Objectives: To train airmen to perform data flow system analysis, and to align, adjust, and troubleshoot the MG-10 fire control system.

Instruction: Lectures and practical exercises in data flow system analysis and the alignment, adjustment, and troubleshooting of the MG-10 fire control system, including DC and AC fundamentals, vacuum tube electronics, and block-diagram analysis and signal flow theory as related to intelligence gathering, antenna positioning, and computer loops and system tie-in.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory for technical students (7/74).

AF-1715-0709

Airborne Command Post Communications Equipment (CE) Repairman

Course Number: 3ALR32850A-1; 3ALR30150A-1.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3380th Technical School, Keesler AFB, MS.

Length: 23–24 weeks (690–720 hours).

Exhibit Dates: 9/70–12/73.

Objectives: To train airmen to maintain airborne command post communications equipment.

Instruction: Lectures and practical exercises in the maintenance of airborne command post communications equipment, including digital and solid-state techniques, Boolean algebra, UHF radio system analysis, multiplex system analysis and accessories, switchboard analysis CSA and APM, SATCOM system analysis, and specific transmit and receive systems equipment analysis.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical or electronics laboratory (7/74).

AF-1715-0711

Missile Electronic Equipment Specialist, WS-133A-M

Course Number: 3ABR31632G-1.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 34–38 weeks (1020–1307 hours).

Exhibit Dates: 1/71–12/73.

Objectives: To train airmen as missile electronic equipment specialists.

Instruction: Lectures and practical exercises in the operation, maintenance, and repair of missile electronic launch equipment and in electronic principles, including AC and DC circuits, resonance, introduction to magnetism, motors and synchros; electron tubes, power supplies, regulators, multivibrators, blocking oscillators, and AM systems; transmission lines, antennas, transmitters, wave-guides, cavity resonators, and UHF and microwave oscillators and amplifiers; electrical test equipment; diode and transistor circuits, digital techniques, binary and octal numbers, logic functions, truth tables, Boolean algebra, logic diagrams, circuits, counters, and storage devices; analysis of launch equipment, test equipment malfunctions, removal and installation of modules and components of WS-133A-M launch equipment, weapon system logic, UHF command radio system, voice reporting signal assembly, control guidance coupler, data analysis central equipment, and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical or electronic laboratory (7/74).

AF-1715-0712

Missile Guidance and Control Specialist (AGM/AIM)TAC

Course Number: *Version 1:* 3ABR31631L-3. *Version 2:* 3ABR31631L-3. *Version 3:* ABR31631L-3.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 19 weeks (582 hours). *Version 2:* 24 weeks (690 hours). *Version 3:* 26 weeks (750 hours).

Exhibit Dates: *Version 1:* 1/71–12/73. *Version 2:* 5/68–12/70. *Version 3:* 7/67–4/68.

Objectives: To train technicians to operate, maintain, and reapir AGM/AIM TAC guided missile systems.

Instruction: Lectures and practical exercises in electronic principles, including AC and DC fundamentals, tubes, transistors, power supplies, regulation, amplifiers, oscillators, wave-shaping circuits, AM and FM, single sideband, transmission lines and antennas, servomechanisms, cavity resonators, hand tools operation, multimeters, oscilloscopes, and microwave principles; and guided missile systems operation, maintenance, and repair, including components, block-diagram analysis, and troubleshooting techniques.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 7 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (7/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in electronics, 2 in electronics as a technical elective for non-technical students, and additional credit in electronics on the basis of institutional evaluation (7/74). *Version 3:* In the upper-division baccalaureate category, 7 semester hours in electronics and additional credit in electronics on the basis of institutional evaluation (7/74).

AF-1715-0713

1. Missile Control Communications Systems Repairman
2. Missile Control Communications Systems Repairman
3. Telephone Switching Equipment Specialist (Combat Operations Support)

Course Number: *Version 1:* 3ABR36233. *Version 2:* 3ABR36233; ABR36233. *Version 3:* ABR36231B.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 27 weeks (810 hours). *Version 2:* 28–30 weeks (810 hours). *Version 3:* 33 weeks (900–990 hours).

Exhibit Dates: *Version 1:* 9/71–12/73. *Version 2:* 4/65–8/71. *Version 3:* 1/64–3/65.

Objectives: To train airmen as missile control communications systems repairmen or as telephone switching equipment specialists.

Instruction: *All Versions:* Lectures and practical exercises in electronics fundamentals and the repair of missile control communications systems or telephone switching equipment, including DC and AC circuits, reactance, principles of vacuum tubes and transistors, amplifiers and oscillators, relays and relay adjustment, Titan II communications equipment, and maintenance management and troubleshooting techniques. *Version 1:* Includes computer principles, airborne power supplies and controllers, missile systems principles; soldering equipment, test equipment, solid-state application in wave generation, digital techniques (Boolean equations, number systems, truth tables, counters and storage devices, and logic diagrams and circuits), SAC and CTE equipment analysis, maintenance of Minuteman wire communications, and Titan II radio signaling control equipment. *Version 2:* Includes computer principles, airborne power supplies and controllers, missile systems principles, soldering techniques, test equipment, multivibrators, logic mathematics, symbols and circuits, Minuteman wire communications and cable monitor equipment, and SAT and CTE equipment analysis. *Version 3:* Includes switching center principles, cable procedures, switchboard circuitry, ground telephone assembly and operation, Atlas switching equipment, and Atlas and Titan I launch-enable system equipment analysis.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, 1 in electrical laboratory, 1 as a technical elective for non-engineering majors, and additional credit in electronics laboratory on the basis of institutional evaluation (7/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in electricity or electronics, 1 in electrical laboratory, 1 as a technical elective for non-engineering majors, and additional credit in electronics laboratory on the basis of institutional evaluation (7/74). *Version 3:* In the upper-division baccalaureate category, 1 semester hour in electrical laboratory, 1 as a technical elective for non-engineering majors (7/74).

AF-1715-0714

Missile Electronic Equipment Technician WS-133(CDB)

Course Number: 3AZR31672G-1.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL.

Length: 5 weeks (253 hours).

Exhibit Dates: 9/73–12/73.

Objectives: To train electronics technicians to maintain and repair missile support equipment.

Instruction: Lectures and practical exercises in the repair and maintenance of missile support equipment. Course includes circuit and block-diagram analysis of electronic equipment, troubleshooting procedures, and alignment techniques.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electronics laboratory as an elective for non-engineering students (7/74).

AF-1715-0715

Missile Launch/Missile Officer (SM-65D)

Course Number: OZR1821B; OZR3121B-3.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 8 weeks (240 hours).

Exhibit Dates: 1/62–12/68.

Objectives: To train officers to be missile officers.

Instruction: Lectures and practical exercises in missile systems and associated ground equipment, flight and launch control systems, and facility systems familiarization and operation.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour as a technical elective in electricity for non-technical students (7/74).

AF-1715-0719

Instrumentation Mechanic

Course Number: ABR31730.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 30–35 weeks (810–960 hours).

Exhibit Dates: 2/63–4/68.

Objectives: To train enlisted personnel to calibrate, maintain, troubleshoot, and repair time-and-frequency multiplexing and demultiplexing systems and digital data-acquisition equipment.

Instruction: Lectures and practical exercises in electronics fundamentals and the calibration, maintenance, troubleshooting, and repair of time-and-frequency multiplexing and demultiplexing systems and digital data-acquisition equipment, including AC and DC fundamentals, modulation systems, vacuum tubes and transistors, and amplifiers; frequency-and-time multiplexing components; airborne data-acquisition-set components; airborne and ground analog and digital equipment; signal conditioning and time-division multiplexing; telemetric systems components; spectrum analysis; digital, oscillographic, and magnetic tape recording, video recording, closed-circuit television procedures and equipment; and special test equipment. Includes power supplies, wave-shaping circuits, single sideband, transmission lines and antennas, cavity resonators, servomechanisms, and microwave principles; physics, transducers, and signal conditioners; transmitters, receivers, sensors, and monitoring principles; optics and photography; height-finder equipment; commutation and decommutation; theodolites; integrated systems; and electrical test equipment.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in electronics and credit in electronics and electrical laboratory on the basis of institutional evaluation (7/74).

AF-1715-0721

Weapons Controller (ECCM Operations Officer)/Electronic Warfare Countermeasures Specialist

(Weapons Controller (ECCM Operations Officer))

Course Number: 3ALR27631; 3OLR1741D; OBR1741D.

Location: School of Applied Aerospace Sciences, Keesler AFB, MS; 3380th Technical School, Keesler AFB, MS.

Length: 10–44 weeks (394–1320 hours).

Exhibit Dates: 2/64–12/73.

Objectives: To train personnel as weapons controllers.

Instruction: Lectures and practical exercises in the basic application of electronic principles, description and principles of electronic circuitry included in typical current radars, data processing and data transmission equipment, comprehensive theory of electronic countermeasures and counter-countermeasures, circuits used to effect ECM and ECCM, duties of Radar Inputs and Countermeasures Officer position, and practical applications of ECCM equipment in a simulated ECM environment. Topics include development of electronic principles and applications to electronic equipment, technical publications, functional block diagrams, including operational adjustments of modern AC & W radar equipment, principles of data processing equipment, recognition and identification of jamming and the use, application, and operation of appropriate ECCM devices available to counteract the effects of undesirable signals.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electrical laboratory on the basis of institutional evaluation (7/74).

AF-1715-0722

1. Computer Maintenance Officer
   (Electronic Computer Maintenance Officer)
2. Electronic Computer Maintenance Officer

Course Number: *Version 1:* 3OBR3061. *Version 2:* OBR3061.

Location: 3380th Technical School, Keesler AFB, MS.

Length: *Version 1:* 34–41 weeks (1020–1230 hours). *Version 2:* 46 weeks (1380 hours).

Exhibit Dates: *Version 1:* 11/65–1/88. *Version 2:* 9/62–10/65.

Objectives: To train computer maintenance personnel in computer systems maintenance programming and functional analysis.

Instruction: *All Versions:* Lectures and practical exercises in introductory computer programming, solid-state computer system electrical and mechanical components analysis, central processor logic analysis and maintenance programming, and communications security. *Version 2:* Instruction emphasizes vacuum tube electronics.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 5 semester hours in computer principles, and credit in basic electronics on the basis of institutional evaluation (6/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in computer principles, 2 in maintenance management, 4 in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (6/74).

AF-1715-0740

Microwave Measurement and Calibration

Course Number: G3AZR32470.

Location: Technical Training Center, Lowry AFB, CO.

Length: 6 weeks (256 hours).

Exhibit Dates: 10/84–Present.

Learning Outcomes: Upon completion of the course the student will be able to maintain and calibrate frequency counters, phase locking sychronizers, attenuator calibrators, power measuring equipment and sweep oscillators.

Instruction: Lectures and practical exercises on mathematics, transmission and line theory, and the maintenance and calibration of microwave test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in transmission line theory and 3 in microwave test equipment (2/87).

AF-1715-0741

Audiovisual Equipment Repairer

Course Number: G3ABR40430005.

Location: Technical Training Center, Lowry AFB, CO.

Length: 6–7 weeks (233 hours).

Exhibit Dates: 8/86–Present.

Learning Outcomes: Student will be able to repair precision imagery, audiovisual, darkroom, and film developing equipment.

Instruction: Lectures and practical exercises on the repair and maintenance of darkroom equipment, including timers, dryers, enlargers, densitometers, and sensitometers. Includes repair of slide and motion picture projectors, and still and motion picture cameras.

Credit Recommendation: In the vocational certificate category, 2 semeter hours in still camera repair, 2 in motion picture camera repair, 2 in slide and motion picture projector repair and 2 in darkroom equipment repair (2/87).

AF-1715-0742

Television Equipment Specialist

Course Number: G3ABR30435.

Location: Technical Training Center, Lowry AFB, CO.

Length: 12–13 weeks (484 hours).

Exhibit Dates: 10/85–Present.

Learning Outcomes: Upon completion of the course the student will be able to install, perform preventive maintenance and troubleshoot television systems. The student will demonstrate knowledge of the theory of television and video systems, ability to correctly use television test instruments, perform routine maintenance and install and troubleshoot video systems.

Instruction: Training includes the theory of television, television test instruments, video camera, distribution systems, color TV principles, studio audio and video equipment, television receiver and transmitter principles, maintenance, video tape recording alignment and troubleshooting procedures. Method include readings, lectures, exercises, and laboratory experience with TV equipment. Evaluation is by test and performance checks. 70% accuracy is required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic test instruments and 3 in television and video theory (2/87).

AF-1715-0743

Physical Measurement and Calibration

Course Number: G3AZR32470.

Location: Technical Training Center, Lowry AFB, CO.

Length: 4 weeks (159 hours).

Exhibit Dates: 4/87–Present.

Learning Outcomes: The student will be able to perform duties in physical measurement and calibration of instruments.

Instruction: Personnel are trained in linear, torque, mass, weight, temperature, pressure, vacuum, laser, and intercomparison measurements. Emphasis is placed on error analysis, applied mathematics, use of test equipment and calibration standards.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of metrology (2/87).

AF-1715-0744

Enemy Defense Penetration Aids

Course Number: T1115005.

Location: Air National Guard, A-7 Fighter Weapons School, Tucson, AZ.

Length: 2 weeks (69–70 hours).

Exhibit Dates: 3/85–Present.

Learning Outcomes: Upon completion of the course the student will be able to assist in the establishment, development, and execution of a unit Electronic Combat (EC) program. Designed for Mission Ready (MR) A-7, A-10, and F-16 pilots.

Instruction: Classroom lectures and working group assignments. The academics include a detailed study of the history and future trends of the use of the electromagnetic spectrum as a medium of warfare. Particular emphasis is directed at Radar principles, tracking techniques, countermeasures, electro-optical techniques and EM tactics. Students will develop a practical application problem of real world target environments.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced electronics/radar systems (3/88).

AF-1715-0745

BIOMEDICAL EQUIPMENT MAINTENANCE SPECIALIST BY CORRESPONDENCE

Course Number: 91850.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/87–Present.

Learning Outcomes: Upon completion of the course, the student will understand the theory and basic fundamentals of biomedical electronics including the repair and evaluation of clinical laboratory equipment and computers.

Instruction: Monitored home study course including reading and written exercise and written proctored examination. Topics include theoretical concepts of repair and evaluation of clinical and medical equipment, the basic and advanced principles of electronics and troubleshooting procedures, and introductory and intermediate concepts in computer technology.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic electronic principles, 3 in advanced electronics, 3 in theory of maintenance and therapeutic equipment, 3 in fundamentals of X-ray and imaging systems, 3 in theory of cardiac equipment and computer applications of biomedical equipment (5/88).

AF-1715-0746

ELECTRONICS FUNDAMENTALS BY CORRESPONDENCE

Course Number: 3025.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/84–Present.

Learning Outcomes: Upon completion of the course, the student, with a minimum of supervision, would be able to perform maintenance and repair of basic navigation communications and pulse equipment including antenna installation and repair.

Instruction: This is a supervised, self-paced, extension course covering direct and alternating current theory; electronic device theory, motion conversion and behavior of electrons; communication principles, dealing with characteristics and functional operations of AM transmitters, single side band transmitters and receivers, frequency and phase modulated transmitters and FM receivers; transmission lines, antennas, and wave propagation fundamentals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic fundamentals (10/88).

AF-1715-0747

COMMUNICATIONS-ELECTRONICS SYSTEMS TECHNOLOGY BY CORRESPONDENCE

Course Number: 3026.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/84–Present.

Learning Outcomes: Upon completion of the course, the student will understand radio and radar theory and applications necessary for intermediate management of a communications and electronics organization.

Instruction: This is a self-paced follow on course which goes into radio and radar theory and application. Radio bands from extremely low (ELF) to extremely high (EHF) are examined. Emphasis includes line of sight considerations, tropospheric scatter and safety. Probability (distribution), reliability, maintainability, application and multiplex operations are also included. The course is structured for admininstration with limited previous experience.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in radio wave theory and applications (10/88).

AF-1715-0748

COMMUNICATIONS-ELECTRONICS EMPLOYMENT BY CORRESPONDENCE

Course Number: 3028.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/84–Present.

Learning Outcomes: Upon completion of the course, the student will have acquired a basic knowledge of the related subject materials which cover telephone principles, signaling and inside plant support equipment, telephone switching system, and outside plant and traffic engineering, air traffic control systems and traffic control and landing systems.

Instruction: This is a self-paced supervised extension course including automatic telephone systems, supervision and signaling, basic switching techniques and terminology, inside plant support, telephone and wire maintenance documents, automatic telephone - direct control, automatic telephone - common control system, tactical switching systems, multi-line subscriber equipment, outside plant, outside-plant in-place records, traffic engineering, control of air traffic, navigational aids, air traffic control (ATC), tower, radar principles, facilities and equipment, omnirange, instrument landing system. The course is geared mostly to telephone systems with very little on air traffic control other than principles of air traffic control and their related systems.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic telephone principles (10/88).

AF-1715-0749

ELECTRONIC TUBES AND SPECIAL PURPOSE TUBES BY CORRESPONDENCE

Course Number: 3031.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/86–Present.

Learning Outcomes: Upon completion of the course,the student will understand vacuum tube principles and operation. Designed as a review for a person who has previously completed more extensive training in the area or for a brief overview of this equipment.

Instruction: Self-paced extension course which serves as an overview of electron tues (diodes, triodes and multigrid), tube checking and circuits, including amplifiers, cathode ray tubes (cold and hot). Also covered are oscillators (lighthouse, reflex klystron, and magnetron.

Credit Recommendation: Credit is not recommended as the course is a review of limited material (10/88).

AF-1715-0750

FUNDAMENTALS OF SOLID STATE DEVICES BY CORRESPONDENCE

Course Number: 3032.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/71–Present.

Learning Outcomes: Upon completion of the course, the student understand principles and concepts of semiconductors. A comprehensive understanding of fundamental circuitry will have been acquired.

Instruction: Self-paced extension course which begins with an over-view of solid state devices from fundamental physics and mathematics to theory of simple rectifying and special solid state devices and transistors. Material goes through functional principles of electronic circuits and applications for solid state equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in semiconductor theory and application (10/88).

AF-1715-0751

SINEWAVE OSCILLATORS-MODULATION/DEMODULATION BY CORRESPONDENCE

Course Number: 3034.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to better understand the principles of sinewave oscillators and modulation/demodulation techniques, concepts of amplitude modulation, single-sideband, frequency modulation, phase modulation and pulse modulation reduced to a basic knowledge.

Instruction: Self-paced extension course covers principles of oscillation theory, operations and troubleshooting concepts of common oscillators. The course discusses frequency synthesizers, AM modulation and demodulation as well as principles of single sideband and FM . The material is constructed to include a block diagram and brief review in each stage.

Credit Recommendation: Credit is not recommended due to the limited application and coverage of content (10/88).

AF-1715-0752

POWER SUPPLIES BY CORRESPONDENCE

Course Number: 3038.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to better understand details of power supply's relationship to circuits for more efficient troubleshooting of power supply circuits.

Instruction: Self-paced extension course designed for the person with prior theoretical and practical training and experience, the course discusses operation of transformers, rectifiers, and filters, and principles and uses of voltage dividers and regulators. The course concludes with polyphase power supply concept review.

Credit Recommendation: Credit is not recommended as the course contains a very limited review of material (10/88).

AF-1715-0753

COMMUNICATION-ELECTRONICS SYSTEMS ACQUISITION AND MANGEMENT BY CORRESPONDENCE

Course Number: 3027.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.
Exhibit Dates: 7/80–Present.

Learning Outcomes: Upon completion of the course, the student will understand the steps required to plan, program, and budget for major government systems acquisition. This is a foundation course for middle managers.

Instruction: A self-paced extension course for managers and prospective managers with an overview of planning on the national level with specific applications to the Department of Defense, this course offers a more detailed view of communications and electronics planning, programming, and documentation. Standard and nonstandard programming involving program management, action agencies, integration of logistics support and operational test and evaluation, resources management, and the budgeting process are all included.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in acquisition and management of government systems (10/88).

AF-1715-0754

Aerospace Control and Warning Systems Operator by Correspondence

Course Number: 27650.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to qualify for upgrade training as an aerospace control and warning systems operator. He will be familiar with the principles of operation, system limitations and the equipment applicable to both atmospheric and space radar detection systems.

Instruction: The three volumes that comprise the study materials for this course provide a broad survey of radar applications to the aerospace control and warning field. The basic theory of radar, weather effects, related communication systems as well as computer integration is presented. An overview of major military radar as applied to space and space related systems, are considered. Atmospheric radar systems, both airborne and ground based, are described and their performance evaluated.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to radar systems (12/89).

AF-1715-0755

Space Systems Operations Specialist by Correspondence

Course Number: 27750.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain digital computers and micro-processors under medium supervision in support of space systems.

Instruction: The student will recieve instruction concerning basic electricity and electronics, basic communication systems, digital computer operation and fundamental space mechanics.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer system troubleshooting and maintenance (12/89).

AF-1715-0756

Avionics Test Station and Component Specialist (F-16/A-10) by Correspondence

Course Number: 45155.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 9/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain, troubleshoot, repair or replace electronic equipment using computerized testing and maintenance equipment, and will test and repair flight control and instrument systems.

Instruction: The student will receive instruction concerning electronic theory and application, test equipment operation and maintenance and test and maintenance of flight control systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and 2 semester hours in electronic test station operation (12/89).

AF-1715-0757

Integrated Organizational Avionics Systems Specialist by Correspondence

Course Number: 45250.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 11/87–8/89.

Learning Outcomes: Upon completion of the course, the student will comprehend material management proceedures, identify aircraft tools and hardware, perform solderless wire connections and understand the basic use of an ammeter, voltameter and ohmmeter. Fundamentals of D.C. and A.C. electricity, magnetism, transformers, generator, motors and electrical circuit interpretation; solid state electrical circuits, numbering, computation and digital logic systems and digital computer theory, logic and operation, are covered.

Instruction: The student will receive instructions concerning the use of handtools, soldering principles, solderless connections and operating principles and use of electrical measuring instruments. Course will also cover basic electricity, transformers, generators, motor and electric circuit computation, solid state electronics and associated systems and digital computer theory and operation. Will also cover material management procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in materials management, 2 in basic electricity and 2 in solid state electronics and digital computer fundamentals (12/89).

AF-1715-0758

Integrated Organizational Avionic System Specialist by Correspondence

Course Number: 45250B.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/89–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the fundamentals of D.C. and A.C. electricity, magnetism, transformers, generator, motors and electrical circuit interpretation, and will understand and work with solid state electronics systems and circuits, numbering systems, digital logic and computation systems, digital computer theory and operation.

Instruction: The student will receive instructions concerning the use of OHM's and Kirchhoff's Laws to compute electrical circuits, the operating principles and uses of transformers and theory of operation of generators and motors. Course also covers solid state electronics and associated systems, digital computer theory and operation and material management.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electricity and 2 in solid state electronics and digital computer fundamentals (12/89).

AF-1715-0759

Integrated Avionic Attack Control Systems Specialist by Correspondence

Course Number: 45252A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 8/89–Present.

Learning Outcomes: Upon completion of the course, the specialist who is at the skilled or advanced level will obtain the basic knowledge to maintain the integrated avionic attack control system installed on the F-16 aircraft.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content areas cover an orientation to the F-16 series aircraft with particular reference to the integrated avionic attack control system. Specific topics include head-up and head-down systems, fire control sensing, pulse doppler radar, inertial navigation, synchronizer, transmitter and modulator circuits, radio waves and receives, transmission lines, wave guides, antennas and radar displays.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronics - radar system (12/89).

AF-1715-0760

Integrated Avionics Attack Control Systems Specialist (F/FB-111) by Correspondence

Course Number: 45253A.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 11/87–Present.

Learning Outcomes: Upon completion of the course, the student who is at the skilled or advanced level will obtain the basic knowledge to maintain the integrated avionic attack control system installed on the F-111 Aircraft.

Instruction: The course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content area covers an orientation to the F-111 series aircraft with particular reference to the integrated avionic attack control system. Specific topics include navigation computers-including computer complexes and multiplex busses, control and display systems (optical and integrated), airborne video tape recording, terrain following, navigation and altmeter radar, and inertial navigation systems.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electronics radar systems (12/89).

AF-1715-0761

Avionics Guidance and Control
Systems Technician by
Correspondence

Course Number: 45571.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/88–Present.

Learning Outcomes: Upon completion of the course, the student will comprehend the necessity of personnel and shop safety around aircraft, comprehend maintenance and material compleses and tracking, understand and use basic electrical theory, synchro-indicating systems, electronic systems to include solid state,and understand the use of avionics fundamentals for flight and navigation, data processing methods and use of the test equipment.

Instruction: The student will receive information concerning personnel and shop safety, maintenance and materials complexes and tracking, basic electricity, electronic, solid state electronic and avionics fundamentals. Also basic theory of flight, navigation principles, principles of data processing and test equipment use are covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic electricity and 2 semester hours in electronics and avionics (12/89).

AF-1716-0001

Fabric and Rubber Products
Specialist

(Fabric, Leather and Rubber Products
Repairman)

Course Number: 3ABR58230; AB58230.

Location: Chanute Technical Training Center, Chanute AFB, IL.

Length: 11–18 weeks (330–510 hours).

Exhibit Dates: 5/58–12/73.

Objectives: To train airmen to inspect, maintain, repair, and fabricate items made of fabric, leather, rubber, and other materials.

Instruction: Lectures and practical exercises in the inspection, maintenance, repair, and fabrication of items made of fabric, rubber, and other materials, including operation and maintenance of sewing machines; repair and alteration of flying and aircrew protective clothing and survival equipment; covering and doping of aircraft control surfaces; repair and fabrication of protective covers for ground support equipment; repair of life preservers and rafts; and practical work with leather. Includes maintenance of fire-fighter and high-altitude clothing and the identification, construction, handling and storage of aircraft fuel cells, bladder cells, tires and tubes, deicer shoes, and ground radomes.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in textile fabrication (6/74).

AF-1717-0001

Propulsion Shop Management

Course Number: AZR43270-9.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 3-4 weeks (114 hours).

Exhibit Dates: 1/67–6/68.

Objectives: To train enlisted personnel to manage a propulsion shop.

Instruction: Lectures and practical exercises in forecasting, work authorization, product and process planning, material control and management, scheduling and loading, dispatching, progress reporting, and corrective actions.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0002

Aircraft Maintenance Staff Officer

(Aircraft Maintenance Management Officer)

(Aircraft Maintenance Officer)

Course Number: 3OAR4311; OAR4311; OA4311.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 6–9 weeks (168–270 hours).

Exhibit Dates: 5/56–12/73.

Objectives: To train enlisted personnel to perform as aircraft maintenance staff officers.

Instruction: Lectures and practical exercises in personnel management, human relations, maintenance policies, communicative skills, statistics and maintenance data collection, material control, quality control, aircraft accident investigation procedures, records and reports, and administrative and technical publications familiarization.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in shop management (12/68).

AF-1717-0003

Aircraft Maintenance Officer

Course Number: *Version 1:* 3OBR4021. *Version 2:* 3OBR4341; OBR4341. *Version 3:* OBR4341. *Version 4:* OBR4341.

Location: *Version 1:* School of Applied Aerospace Sciences, Chanute AFB, IL. *Version 2:* 3345th Technical School, Chanute AFB, IL.

Length: *Version 1:* 20–21 weeks (600–630 hours). *Version 2:* 30–31 weeks (900–918 hours). *Version 3:* 32 weeks (960 hours). *Version 4:* 35 weeks (1050 hours).

Exhibit Dates: *Version 1:* 3/71–12/73. *Version 2:* 6/62–2/71. *Version 3:* 12/60–5/62. *Version 4:* 3/55–11/60.

Objectives: To provide officers with training in aircraft maintenance procedures and management.

Instruction: *All Versions:* Lectures and practical experience in aircraft maintenance and management, including aircraft systems, components, and equipment familiarization; management and supervision; oral and written communications skills; human relations; and aircraft maintenance officer organizational and administrative duties and responsibilities. *Version 2:* Theory of flight; management principles. *Version 3:* Theory of flight; management principles. *Version 4:* Theory of flight; management principles.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 5 semester hours in business organization and management and additional credit in business organization and management on the basis of institutional evaluation (3/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in business organization and management, 2 in personnel management (12/68). *Version 3:* In the upper-division baccalaureate category, 6 semester hours in business organization and management, 2 in personnel management (12/68). *Version 4:* In the upper-division baccalaureate category, 7 semester hours in business organization and management and additional credit in business organization and maintenance on the basis of institutional evaluation (12/68).

AF-1717-0004

Aircraft Maintenance/Avionics
Officer Accelerated

Course Number: 3OBR4021, 3OBR4041-1.

Location: School of Applied Aerospace Science, Chanute AFB, IL.

Length: 6 weeks (168–222 hours).

Exhibit Dates: 8/72–12/73.

Objectives: To train officers in aircraft maintenance and avionics maintenance management.

Instruction: Lectures and practical exercises in the principles and concepts of maintenance management; personnel relations; maintenance organizations; planning and scheduling; manpower utilization and control; analysis; communicative skills; and associated supply and materiel functions.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in business organization and management (3/74).

AF-1717-0005

Aircrew Egress Systems Mechanic by
Correspondence

Course Number: 42352.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform general maintenance duties following appropriate technical orders and publications while applying good maintenance management concepts. Emphasis is placed on proper handling of explosives, and on demonstrating intermediate knowledge of electrical and pneumatic principles.

Instruction: The student works under indivudual supervision and with a trainer or training manager to control progress in the areas of: aircrew egress systems mechanical fundamentals; management and supply fundamentals; fundamentals and specific knowledge of egress systems (B52,F-4, F015, F-111, and F-38). Test equipment such as multimeters and common hand tools are used.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in maintenance principles, 1 in industrial safety (10/88).

AF-1717-0006

Aircraft Maintenance Technician, Jet
Engine Aircraft

(Aircraft Maintenance Technician, Jet
Engine Type Aircraft)

Course Number: AAR43171E; AAR43171D; AA43171D.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 14–16 weeks (420–480 hours).

Exhibit Dates: 11/55–12/68.

Objectives: To train aircraft mechanics in maintenance management of jet engine aircraft.

Instruction: Lectures and practical exercises in supervision of maintenance personnel; publications and aircraft records; aircraft electric, hydraulic, fuel, indicator, and flight control systems; structural maintenance; corrosion control; weight and balance instruments; and jet engines, starters, and ground equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0008

GCA Radar Officer

Course Number: OB3041A.

Location: 3380th Technical School, Keesler AFB, MS.

Length: 12 weeks (360 hours).

Exhibit Dates: 5/54–12/68.

Objectives: To train officers in radar system operation and maintenance.

Instruction: Lectures and practical exercises in radar system operation and maintenance, including radar system general characteristics, AC and DC circuit fundamentals, electron tubes and amplifiers, transmitters and receivers, transient circuits, microwave propagation, and management and security concepts and practices.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in maintenance management (4/74).

AF-1717-0009

1. Programs and Work Control Specialist
2. Maintenance and Control Specialist

Course Number: 3ALR55530-3.

Location: *Version 1:* School of Applied Aerospace Sciences, Sheppard AFB, TX. 3750th Technical School, Sheppard AFB, TX.

Length: *Version 1:* 8–9 weeks (240–320 hours). *Version 2:* 10 weeks (300 hours).

Exhibit Dates: *Version 1:* 5/69–12/73. *Version 2:* 11/67–4/69.

Objectives: To train airmen to perform as programs and work control or maintenance and control specialists.

Instruction: Lectures and practical exercises in programs and work control or maintenance and control, including planning or maintenance of plumbing and interior electric systems, scheduling procedures, and use of automatic data management systems. Includes program planning with emphasis on automation; planning structural, protective coating, masonry, and multishop work; production control, repair and maintenance of buildings and installed appliances; trouble analysis of low voltage electrical circuits; and planning fundamentals.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 2 semester hours in engineering management (5/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68).

AF-1717-0011

Consolidated Maintenance Management (ADC)

Course Number: OZR4341.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 3 weeks (78–90 hours).

Exhibit Dates: 6/59–12/68.

Objectives: To train commissioned and warrant officers to manage and administrate a consolidated maintenance program.

Instruction: Lectures and practical exercises in consolidated maintenance management. Course includes administration procedures, organization, documentation, production control, performance standards and review, workloads and schedules, property and financial management, and quality control.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68).

AF-1717-0012

Aerospace Ground Equipment Repair Technician
(Aircraft and Missile Ground Support Equipment Repair)

Course Number: 3AAR42173; AAR42173; AAR42172.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 8–12 weeks (240–480 hours).

Exhibit Dates: 2/61–6/73.

Objectives: To train airmen to repair and maintain aerospace ground equipment at the intermediate level.

Instruction: Lectures and practical exercises in the repair and maintenance of aerospace ground equipment, including electrical and electronic circuits, components, and test equipment, and the troubleshooting and maintenance of electric motors, gasoline engines, gas turbines, motors, engines, turbine-driven generator sets, air compressors, hydraulic support equipment, cabin leakage testers, ground heaters, and equipment coolers. Includes pressurizing equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0013

Corrosion Control Specialist by Correspondence

Course Number: 42751.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/84–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance, and supervise subordinates, in missiles, aircraft, and support systems, and in corrosion control procedures.

Instruction: This is a supervised, self-paced extension course covering security training publications; maintenance equipment and supply; supervision, management, inspection systems; preparation for corrosion control, corrosion removal, and the application of organic coatings (10/88).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in corrosion control (10/88).

AF-1717-0014

Aircraft Maintenance Officer Accelerated

Course Number: 3OBR4021-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 8 weeks (240 hours).

Exhibit Dates: 3/71–12/73.

Objectives: To train selected commissioned officers to maintain aircraft.

Instruction: Lectures and practical exercises in the duties and responsibilities of an aircraft maintenance officer. Course includes instruction in aircraft maintenance management policies and techniques; personnel relations; maintenance organizations; planning and scheduling; manpower utilization and control; maintenance data collection and analysis; communicative skills; associated supply and material functions; and related aircraft activities.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in aircraft maintenance management (6/74).

AF-1717-0015

Missile Officer, WS-133A
(Missile Officer, SM-80)

Course Number: OZR3121G-1; OZR3121D-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 7–9 weeks (222–270 hours).

Exhibit Dates: 7/62–12/68.

Objectives: To train officers to supervise missile maintenance and alignment on the WS-133A weapon system.

Instruction: Lectures and practical exercises in WS-133A weapons system familiarization, missile facility systems, electronics, missile alignment, missile targeting, launch control and launch facilities, and maintenance management and responsibilities.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0016

Missile Officer, WS-133A

Course Number: 3OBR3121G; OBR3121G; OBR3121G-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 12–15 weeks (360–450 hours).

Exhibit Dates: 12/64–12/73.

Objectives: To train officers as missile officers for 133A weapons systems.

Instruction: Lectures and practical exercises in 133A weapons systems, including DC and AC circuits, generators and motors, solid-state devices, communications, power systems, guidance and control systems, operation and control of launch complex mechanical systems, maintenance management, weapon systems and electrical test equipment and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0017

Missile Officer, WS-133A

Course Number: OZR3121G.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 8–9 weeks (240–270 hours).

Exhibit Dates: 11/65–12/73.

Objectives: To train officers as missile officers for 133A weapons systems.

Instruction: Lectures and practical exercises in 133A weapons systems, including DC and AC circuits, generators and motors, solid-state devices, communications, power systems, guidance and control systems, operation and control of launch complex mechanical systems, maintenance management, aerospace ground equipment and testing equipment, and troubleshooting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop managment (12/68).

AF-1717-0018

Missile Officer, WS-133B

Course Number: OZR3121G-2.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 8 weeks (240 hours).

Exhibit Dates: 4/65-12/68.

Objectives: To train officers as missile officers for WS-133B systems.

Instruction: Lectures and practical exercises in the duties of missile officers, including missile maintenance management; transportation and handling; troubleshooting and maintenance of WS-133B missile systems; logistics and administrative procedures; aerospace ground equipment and electronics; test equipment; launch facility equipment; and missile alignment and targeting procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0019

Missile Officer, WS-133A-M

Course Number: OBR-3121G-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 13 weeks (390 hours).

Exhibit Dates: 6/67-12/68.

Objectives: To train officers as WS-133A-M missile maintenance officers.

Instruction: Lectures and practical exercises in WS-133A-M missile maintenance activities, including fundamentals and theory of missile electrical and electronic systems, operation and control of launch complex mechanical systems, maintenance management, transport and handling, aerospace ground equipment, test equipment and troubleshooting procedures, targeting and alignment tasks of the weapon system, system configuration to the block-diagram level, and principles of guidance and control systems.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop management (12/68).

AF-1717-0021

Ground Equipment Maintenance Officer

Course Number: OBR4381; OB4381.

Location: *Version 1:* 3345th Technical School, Chanute AFB, IL. *Version 2:* 3450th Technical School, Warren AFB, WY.

Length: 9-10 weeks (270-300 hours).

Exhibit Dates: 4/54-12/68.

Objectives: To train officers to perform as ground equipment maintenance officers.

Instruction: Lectures and practical exercises in the duties of ground equipment maintenance officers, including motorized and miscellaneous equipment and maintenance functions; maintenance shop organization and layout; and personnel management, supervision and training.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in shop managment (12/68).

AF-1717-0023

Maintenance Management

Course Number: OZR0066-2.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 4 weeks (108 hours).

Exhibit Dates: 1/63-12/68.

Objectives: To train enlisted personnel to understand maintenance management concepts and procedures.

Instruction: Lectures and practical exercises in maintenance management concepts and procedures. Course includes reporting, principles of management, managerial analysis and control, materials management, quality control and inspection procedures.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in maintenance management (12/68).

AF-1717-0024

Aerospace Munitions Staff Officer

Course Number: *All Versions:* 3OAR4611. *Version 2:* OAR4611.

Location: 3415th Technical School, Lowry AFB, CO.

Length: *Version 1:* 4-8 weeks (120-240 hours). *Version 2:* 13 weeks (390 hours).

Exhibit Dates: *Version 1:* 8/68-12/73. *Version 2:* 8/66-7/68.

Objectives: To train commissioned officers to perform as aerospace munitions staff officers.

Instruction: Lectures and practical exercises in the duties of an aerospace munitions staff officer. Course includes munitions management, budget estimating, research and development, and special military subjects.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in principles of management (8/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in principles of management, and credit in oral and written communication on the basis of institutional evaluation (12/68).

AF-1717-0025

Air Force Base Level Maintenance Management

Course Number: 212.

Location: School of Systems and Logistics, Wright-Patterson AFB, OH.

Length: 2-3 weeks (84-90 hours).

Exhibit Dates: 12/69-6/74.

Objectives: To train base-level maintenance supervisors in management skills and maintenance management techniques.

Instruction: Lectures and practical exercises in management skills and maintenance management techniques, including maintenance in the USAF, management overview, equipment readiness, manpower management, configuration control, EOQ, remote terminal exercise, maintenance data collection, integrated logistics support, data processing and computer science, repair-cycle asset control, management engineering, Comm/Acft Main-Man-X, review management survey and management improvements, decision making, motivation, interrelations-supply/maintenance, and Log-Man-X Policy.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in principles of management (8/74); in the upper-division baccalaureate category, 1 semester hour in principles of management (8/74).

AF-1717-0026

Missile Facilities Specialist by Correspondence

Course Number: 44550G.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance and supervise subordinates in inspecting, monitoring, troubleshooting, operating, maintaining and repairing missile weapons system support facilities and equipment.

Instruction: This is a supervised self-paced extension course covering missile maintenance, technical orders, maintenance data collections systems, security and safety, corrosion, hand tools, aerospace hardware, principles of electricity and pneudraulics, layout of Minuteman facilities, hardness assurance and contruction and maintenance of missile, maintaining Minuteman facilities, operation and maintenance of equipment and special purpose vehicles, missile handling and transporting vehicles, equipment, and operation and proofload testing equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in plant maintenance (10/88).

AF-1721-0007

Precision Physical Measuring Technician

Course Number: 3AZR2470-7.

Location: 3415th Technical School, Lowry AFB, CO.

Length: 8 weeks (240 hours).

Exhibit Dates: 3/69-12/73.

Objectives: To train personnel to perform requisite duties as precision physical measuring technicians.

Instruction: Lectures and practical exercises to include applied mathematics; principles of heat and temperature, force, weights and balances, and rotary motion; measurements and calibration techniques; metrology and physical concepts; principles of pressure, humidity and specific gravity, and viscosity and flow.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in metrology (5/74).

AF-1723-0001

Machinist

Course Number: 3ABR53130; ABR53130; AB53130.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 14-20 weeks (420-570 hours).

Exhibit Dates: 2/55-12/73.

Objectives: To train enlisted personnel to be machinists.

Instruction: Lectures and practical exercises in drawing interpretation; applied shop mathematics; use of technical manuals; bench work and assembly practice; use of hand tools and precision measuring instruments; heat treatment; machine tool operations on drill presses, lathes, shapers, milling machines, contour machines, and precision grinders; and weapons and ground support equipment maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in machine trades or machine technology (5/74).

AF-1723-0002

Machinist

Course Number: 3AZR53150-1; AZR53150-1.

Location: School of Applied Aerospace Sciences, Chanute AFB, IL; 3345th Technical School, Chanute AFB, IL.

Length: 6 weeks (180-226 hours).

Exhibit Dates: 8/66-12/73.

Objectives: To train enlisted personnel having technical backgrounds at the craftsman level to design and fabricate tools, dies, jigs, and fixtures for weaponry maintenance.

Instruction: Lectures and practical exercises in metals analysis; drawing interpretation; precision measurement; bench work; heat treatment; machine tool operations on gear cutters, lathes, milling machines, shapers, and tool and cutter grinders; and design and fabrication of jigs, fixtures, punches and dies for weaponry maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in machinist trades or mechanical technology (5/74).

AF-1723-0005

NONDESTRUCTIVE INSPECTION SPECIALIST BY CORRESPONDENCE

Course Number: 42752.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 3/84–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance, and to supervise subordinates in the methods and techniques of nondestructive testing.

Instruction: This is a supervised, self-paced extension course covering topics of terminology, technique, Air Force safety, metallurgy, optical, liquid penetrant, magnetic particle inspection, ultrasonics, eddy current, oil analysis, radiography, techniques development, and bonding test.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in nondestructive inspection (10/88).

AF-1723-0006

METAL FABRICATING SPECIALIST BY CORRESPONDENCE

Course Number: 55252.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: 52 weeks maximum.
Exhibit Dates: 6/83–Present.

Objectives: This course is intended to train individuals to be sheet metal fabrication specialists.

Instruction: On-the-job supervision and at-home studies. The home study provides basic knowledge regarding sheet metal tools and equipment, layout and duct work systems, installed metal equipment and doors, and oxycetylene, electric, and metallic arc welding. Basic shop math and military contingency planning are also covered.

Credit Recommendation: In the vocational certificate category, 4 semester hours in sheet metal fabrication and installation (9/86).

AF-1723-0007

METALS PROCESSING SPECIALIST BY CORRESPONDENCE

Course Number: 53151.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 9/75–Present.

Objectives: This course is intended to train individuals in the fabrication and repair of metal parts and components.

Instruction: This correspondence course of instruction consists of on-the-job training and at-home study. The at-home study provides basic knowledge regarding metal repair and fabrication operations. Oxyacetylene welding, electric welding, metallic arc equipment, gas-shielded welding, TIG welding and resistence welding are covered. Also taught is metal processing, heat treatment, testing and inspection, and metal treatment.

Credit Recommendation: In the vocational certificate category, 6 semester hours in welding (9/86).

AF-1723-0008

MACHINIST BY CORRESPONDENCE

Course Number: 42750.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 12/84–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance and supervise subordinates, and to operate metal working machines in fabricating, reworking and repairing metal parts.

Instruction: This is a supervised, self-paced extension course covering manufacturing and reworking mechanical parts, assembling and fitting machine parts, maintaining hand and machine tools, and supervising machine shop personnel. Course does not require proficiency in computer assisted machinery.

Credit Recommendation: In the vocational certificate category, 3 semster hours in basic machine shop, and 3 in advanced machine tools (10/88).

AF-1723-0009

METALS PROCESSING SPECIALIST BY CORRESPONDENCE

Course Number: 42754.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 11/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to test, inspect and treat metals; identify metals to determine appropriate process (eg. lead on silver, solder, oxyacetylene or electric welding); work with assorted handtools from pliers, nippers, wrenches, files and chisels to measuring devices such as micrometers and calipers; also work with some power equipment such as grinders and buffers, and will have basic knowledge of mechanical drawing, maintenance documentation and management, and maintenance safety.

Instruction: The student in this course works under supervision and with a trainer or training manager to control progress in areas of knowledge related to the use of assorted handtools and limited power tools. Extensive coverage of metal work from the most basic grinding to more sophisticated efforts with gas-shielded, tungsten-inert gas, and resistence welding, carbon steel, ferrous alloys, pipes, castings, and forgings are all included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in welding, and 3 in metal fabrication (10/88).

AF-1723-0010

AIRFRAME REPAIR SPECIALIST BY CORRESPONDENCE

Course Number: 42755.
Location: Extension Course Institute, Gunter Air Force Station, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide technical assistance and to supervise subordinates in the repair and maintenance of sheet metal and composite aircraft structure.

Instruction: This is a supervised, self-paced extension course covering topics of operation of an airframe repair shop; composition and processing of aluminum, titanium, steel, and magnesium to obtain a desired end-product; general repair techniques and procedures; methods of fastening including many types of blind fasteners, installation, and removal; and general repair techniques and procedures for fiberglass, advanced composites, and metal bonded components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in sheet metal repair, 3 in production processes, and 3 in composite structures repair (10/88).

AF-1724-0002

NON-DESTRUCTIVE TESTING OF AIRCRAFT AND RELATED EQUIPMENT COMPONENTS

(Non-Destructive Testing)

Course Number: ATS53270-3.
Location: 3345th Technical School, Chanute AFB, IL.
Length: 3 weeks (90 hours).
Exhibit Dates: 8/58–12/68.

Objectives: To train enlisted personnel in the procedures or techniques used in performing nondestructive testing.

Instruction: Lectures, demonstrations, and practical exercises in nondestructive testing. Topics include: principles, types, causes, and characteristics of discontinuities; preparation and cleaning of parts for testing; protective finishes; theory and methods of magnetic particle, penetrant, ultrasonic, and industrial x-ray and gamma ray (radio isotopes) inspection methods applied to the fabrication, overhaul, and periodic inspection of aircraft parts.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in materials testing, nondestructive testing, machine trades, or industrial technology (5/74).

AF-1724-0003

NON-DESTRUCTIVE INSPECTION SPECIALIST

Course Number: *Version 1:* 3ABR53630. *Version 2:* 3ABR53630; ABR53630.
Location: *Version 1:* School of Applied Aerospace Sciences, Chanute AFB, IL. *Version 2:* 3345th Technical School, Chanute AFB, IL.
Length: *Version 1:* 12 weeks (432 hours). *Version 2:* 12–13 weeks (360 hours).
Exhibit Dates: *Version 1:* 7/73–12/73. *Version 2:* 6/67–6/73.

Objectives: To train enlisted personnel as nondestructive inspection specialists.

Instruction: Lectures and practical exercises in maintenance and inspection systems, magnetic particle and liquid penetrant inspection methods, radiography, x-ray equipment operation, radiographic inspection and film processing, ultrasonic flaw and leak detection, and thickness measurement and eddy current inspection.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in materials testing, nondestructive testing, machine trades, and industrial technology (5/74). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in materials testing, nondestructive testing, machine trades, and industrial technology (5/74).

AF-1724-0004

Non-Destructive Inspection (T/A 455)

Course Number: AZR53250-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 12 weeks (360 hours).

Exhibit Dates: 2/66–12/68.

Objectives: To train enlisted personnel in nondestructive inspection of weapons and equipment.

Instruction: Lectures and practical exercises in nondestructive inspection techniques. Topics include the preparation of metals and parts for inspection; procedures used in the nondestructive inspection of parts; magnetic particle, penetrant, ultrasonic, eddy current, conductivity meter, ultrasonic leak and radiographic inspection methods; types, causes and characteristics of discontinuities and defects; scope and conditions requiring nondestructive inspection; interpretation and evaluation of indications found by various methods of inspection; specifications and standards for inspection regulations governing radioisotopes; and applicable safety methods.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in materials testing, nondestructive testing, machine trades, or industrial technology (5/74).

AF-1724-0006

Apprentice Nondestructive Inspection
Specialist by Correspondence

Course Number: 45851.

Location: Extension Course Institute Gunter Air Force Station,AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to accomplish nondestructive testing procedures using magnification, penetrant, ultra sonic, eddy current and X-ray techniques and to evaluate the results under supervision.

Instruction: Student will receive instructions concerning the use of visual, dye penetrant, ultrasonic, eddy current and X-ray equipment and methods as well as development and evaluate the results.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in Nondestructive Inspection (12/89).

AF-1724-0007

Aircraft Metals Technology
(Welding) by Correspondence

Course Number: 45870B.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 8/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to construct components using oxy-acetrlene, electrical arc or resistance welding methods. Cut metals using flame cutting equipment. Identify of both steel and aluminum. Heat treat metals and test for hardness. Treat metal surfaces to resist corrosion. Be able to supervise others in metal processing using welding for joining.

Instruction: Through correspondence the student will receive information on types of metals, welding using oxy-acetrlene, electrical arc and resistance methods. Metals processing by heat treating to develope strength and plating to prevent corrosion, metal testing to provide quality control of welding.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in metals joining and processes (12/89).

AF-1728-0001

Air Police Noncommissioned Officer
(NCO)
(Air Police Supervisor)

Course Number: AA77170; 96170.

Location: 3625th Training Group, Parks AFB, CA.

Length: 8–12 weeks (240–390 hours).

Exhibit Dates: 3/54–12/68.

Objectives: To train air policemen to become air police supervisors.

Instruction: Lectures and practical experience in the principles of supervision and management, ethics and leadership, organization of air police units, basic air police weapons, unarmed combat, physical apprehension and restraining techniques, internal security, and law enforcement and correction.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in police science or police administration (2/74).

AF-1728-0002

Security Specialist by Correspondence

Course Number: 81150.

Location: Extension Course Institute, Gunter AFB, AL.

Length: Maximum of 52 weeks.

Exhibit Dates: 8/82–11/86.

Objectives: To provide education and training in the techniques and applications of skills related to the physical protection of property, resources, and information.

Instruction: This correspondence course of instruction consists of on-the-job supervision and at-home studies. The home study provides the basic knowledge of security police functions and the on-the-job supervision provides the training to reinforce the home studies as well as provides for special requirements at the installation. The course contains security police history; legal considerations and provisions; communications; community relations; system security operations; protection of resources; accident, disaster, and incident scenes; security police duties, procedures, and tactics. There is a proctored final exam.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in industrial security, law enforcement, police science, or practicum in any of the above categories (7/84).

AF-1728-0003

Security Supervisor by
Correspondence

Course Number: 81170.

Location: Extension Course Institute, Gunter AFB, AL.

Length: Maximum of 52 weeks.

Exhibit Dates: 4/82–10/87.

Objectives: To provide educaton and training for a supervisory role in the techniques and applications of skills related to the physical protection of property, resources, and information.

Instruction: This correspondence course of instruction consists of on-the-job supervision and at-home studies. The home study provides advanced knowledge of security police functions and the on job supervision provides the training to reinforce the home studies as well as provides for special requirements of the installation. The course covers fundamental definitions in military security; access control; crime prevention; and human and community relations in an industrial security context; general security duties; jurisdiction and systems operations as related to the functions of a first level supervison. There is a proctored final examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial security supervision, law enforcement supervision, or police science supervision (7/84).

AF-1728-0004

Traffic Management and Accident
Investigation

Course Number: 3AZR81271-1.

Location: School of Applied Aerospace Sciences, Lackland AFB, TX.

Length: 4 weeks (150 hours).

Exhibit Dates: 3/73–12/73.

Objectives: To train airmen as traffic enforcement officers and accident investigators.

Instruction: Development of installation vehicle codes and traffic flow plans; traffic trends analysis; planning of traffic accident investigations; procedures for preparing and maintaining traffic reports and records, and utilizing graphs, charts, and maps.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in police traffic enforcement (1/74).

AF-1728-0005

Reserve Special Investigations and
Counterintelligence Training
(Reserve Refresher)

Course Number: None.

Location: Special Investigations School (AFOSI), Washington, DC.

Length: 2 weeks (66 hours).

Exhibit Dates: 1/76–1/88.

Objectives: To provide update training in current Special Investigations policies.

Instruction: Student learns the AFOSI reporting system and terminology used in criminal and counterintelligence matters, learns current policy in interviews and interrogations, and learns military law. Subjects covered include investigative administration and management, criminal and fraud investigations, investigative techniques, and counterintelligence.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in police administration/physical security (11/77).

AF-1728-0006

Reserve Special Investigator

Course Number: None.

Location: Special Investigations School (AFOSI), Washington, DC.

Length: 4 weeks (258 hours).

Exhibit Dates: 1/76–1/88.

Objectives: To teach the student to conduct investigations.

Instruction: Student will learn the legal responsibilities imposed on him by military law and authority, to obtain information in accordance with current policies, and to incorporate data into reports of investigation. Topics include investigative orientation, communication skills, law, report writing, interviews and interrogation, criminal and fraud investigations, counterintelligence investigations, and investigative techniques. Course is taught in two 2-week segments.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in police administration/physical security (11/77).

AF-1728-0007

Security Police Staff Officer

Course Number: 3OAR8111.
Location: School of Applied Aerospace Sciences, Lackland AFB, TX.
Length: 3 weeks (91–118 hours).
Exhibit Dates: 6/72–12/73.
Objectives: To provide officers with advanced career training in police management and administration.
Instruction: Planning and programing of aerospace systems security; administration and management of security programs; functions of law enforcement; Air Force corrections program; duties and responsibilities of the security police chief.
Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in police administration and management or public administration (1/74).

AF-1728-0008

Security Specialist

Course Number: 3ABR81130-1.
Location: School of Applied Aerospace Sciences, Lackland AFB, TX.
Length: 5 weeks (150 hours).
Exhibit Dates: 9/72–12/73.
Objectives: To train airmen to perform basic duties as security specialists.
Instruction: Aerospace systems security; local ground defense of Air Force installations; use of security police and ground defense weapons.
Credit Recommendation: In the upper-division baccalaureate category, credit in police science or physical security on the basis of institutional evaluation (2/74).

AF-1728-0009

Law Enforcement Specialist by Correspondence

Course Number: 81152.
Location: Extension Course Institute, Gunter AFB, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 7/82–1/87.
Objectives: To provide basic education and training for an entry-level law enforcement officer.
Instruction: This correspondence course of instruction consists of on-the-job supervision and at-home studies. The home study provides the basic knowledge of law enforcement functions and the on job supervision provides training to reinforce the home studies as well as provides for special requirements at the installation. The course contains arrest, search, and interrogation procedures, procuring statements from witnesses and suspects; basic rules of evidence; crime scene searches; note taking; collection of evidence; confrontation management; elementary corrections (custodial) procedures; accident, disaster, and incident scene investigations. Course has proctored final examination.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in law enforcement, police science, or practicum in either of these categories (7/84).

AF-1728-0010

Law Enforcement Supervisor by Correspondence

Course Number: 81172.
Location: Extension Course Institute, Gunter AFB, AL.
Length: Maximum 52 weeks.
Exhibit Dates: 6/81–7/85.
Objectives: To provide advanced education and training for a first-level law enforcement supervision.
Instruction: This course of instruction consists of on-the-job supervision and at-home studies. The home study provides advanced knowledge of law enforcement functions and the on job supervision provides the training to reinforce the home studies as well as provides for special requirements at the installation. The course consists of law enforcement duties; operations; resources protection; basic management; corrections (custodial); career training; protective measures; security operations and tactics; confrontation management; nuclear, biological, and chemical effects. Course has a proctored final examination.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in law enforcement supervision or police science supervision (7/84).

AF-1728-0016

Security Police Administration
(Police Administration)

Course Number: 3AZR81291.
Location: School of Applied Aerospace Sciences, Lackland AFB, TX.
Length: 3 weeks (85–113 hours).
Exhibit Dates: 10/72–12/73.
Objectives: To train noncommissioned officers and civilians in police administrative duties.
Instruction: Administration; policy formulation; activities coordination; monitoring and inspection of security policy programs; protection and management of resources; installation security and USAF corrections.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in criminal justice or physical security (1/74).

AF-1728-0018

Security Police Officer
(Air Police Officer)

Course Number: 3OBR8121; OBR8121; OBR7721; OB7721.
Location: Lackland Military Training Center, Lackland AFB, TX; 3625th Training Group (ABD), Parks AFB, CA.
Length: 5–13 weeks (150–390 hours).
Exhibit Dates: 3/54–12/73.
Objectives: To train officers to manage security and law enforcement programs.
Instruction: Lectures and field exercises in installation security, training and operating local ground forces, maintenance of law and order, and confining and retraining prisoners.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in police administration (2/74).

AF-1728-0019

Security Policeman
(Air Policeman)
(Air Police (Basic))
(Air Policeman (Basic Air Police))

Course Number: 3ABR81130; ABR81130; ABR77130; AB96150; AB77130.
Location: Military Training Center, Lackland AFB, TX; 3625th Training Group (ABD), Parks AFB, CA.
Length: 6–13 weeks (155–372 hours).
Exhibit Dates: 3/54–12/73.
Objectives: To train airmen to perform duties as security policemen.
Instruction: Lectures and practical exercises in security, law enforcement, corrections, local ground defense, weapons, and field training.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in police administration or physical security (2/74).

AF-1728-0020

Special Investigators
(Special Investigations and Counterintelligence Specialist)
(Special Investigations and Counterintelligence Officer)

Course Number: 5ALO82130; 5OBO8221.
Location: Special Investigations School, Washington, DC.
Length: 10 weeks (336 hours).
Exhibit Dates: 9/62–1/90.
Objectives: To train officers and enlisted personnel in the basic fundamentals and procedures of conducting investigations.
Instruction: Legal considerations; interviews; files and case management systems; formal reports of investigations; criminal, fraud, personnel security, and counterintelligence investigations; investigative techniques.
Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in police administration/physical security (2/74).

AF-1728-0026

Legal Service Specialist

Course Number: 3ALR70530.
Location: School of Applied Aerospace Sciences, Keesler AFB, MS.
Length: 6 weeks (178 hours).
Exhibit Dates: 1/73–12/73.
Objectives: To train personnel as legal services specialists.
Instruction: Lectures and practical exercises on the function of legal services specialists, including military justice and closed-microphone court reporting, legal administration, civil law, and Air Force claims.
Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in court reporting, 3 in criminal justice or criminology (7/74).

AF-1728-0027

Judge Advocate Staff Officer

Course Number: None.
Location: Institute for Professional Development, Maxwell AFB, AL.
Length: 6 weeks (187 hours).
Exhibit Dates: 8/72–1/88.
Objectives: To orient newly commissioned lawyers to the military system of justice and to provide an overview of the applications of legal principles in the military establishment.
Instruction: Topics include: jurisdiction; court structure; legal processes; criminal

and civil litigation, torts, claims, and forensic practices.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in criminal justice or criminology (7/74).

AF-1728-0028

SECURITY POLICE SUPERVISOR

Course Number: 3AZR81170, 3AAR81170.

Location: School of Applied Aerospace Sciences, Lackland AFB, TX; 3275th Technical School, Lackland AFB, TX.

Length: 4 weeks (120 hours).

Exhibit Dates: 5/70–12/73.

Objectives: To train enlisted personnel to supervise a small police organization.

Instruction: Lectures and practical exercises in the administration and supervision of a small police organization. Course includes a review of police organizational procedures to include report writing, public speaking, investigative techniques, legal studies, drug abuse, traffic control, crash investigation, physical security, and the employment of personnel and equipment.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in law enforcement, police administration or criminal justice (7/74).

AF-1728-0038

FIRE PROTECTION SPECIALISTS BY CORRESPONDENCE

Course Number: 57150.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: 52 weeks maximum.

Exhibit Dates: 6/85–Present.

Objectives: To provide entry level training in basic structural and crash firefighting.

Instruction: This correspondence course consists of on-the-job supervision and at home studies to provide basic knowledge in fire protection, equipment, and firefighting. This course consists of instruction in fire prevention, portable extinguishing systems, structural and crash firefighting, rescue operations and supervision and control, and technical services in fire prevention, inspections and equipment maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to fire science (9/86).

AF-1728-0039

SPECIAL INVESTIGATIONS AND COUNTERINTELLIGENCE TECHNICIAN BY CORRESPONDENCE

Course Number: 82170.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/81–Present.

Objectives: Officers and enlisted personnel will be trained in the techniques of conducting and managing an investigation.

Instruction: This correspondence course of instruction consists of on-the-job supervision and at-home studies. Study includes an examination of the military justice system and the importance of ethics in agent conduct. Rules of evidence as applied to the military setting and the collection and preservation of physical evidence are studied. Investigations of crimes against persons, property and incidents of fraud are examined as separate topical areas. The course includes an in-depth study of interviews and interrogation techniques and emphasizes the importance of formulating an investigative plan. Also included is a section on counterintelligence operations and personnel security.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in criminal investigation and 2 in interview and interrogation (9/86).

AF-1728-0042

CRIME PREVENTION BY CORRESPONDENCE

Course Number: 8100.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/82–Present.

Learning Outcomes: Upon completion of the course, the student will recognize the basics of the Air Force Crime Prevention program and a number of basic security measures.

Instruction: Monitored home study with readings, exercises and proctored final examination. Topics include the history and philosophy of crime prevention, definitions of problems and priorities, risk management, prevention programs and management, evaluations of crime prevention programs, and security measures.

Credit Recommendation: Credit is not recommended because of limited, specialized nature of the course (5/88).

AF-1728-0043

MILITARY JUSTICE BY CORRESPONDENCE

Course Number: 8800.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/86–Present.

Learning Outcomes: Upon completion of the course the student will comprehend the scope of the military justice program as administered by the U.S. Air Force; understand the fundamental differences between the military and civilian justice systems and the need for those differences, and the ramifications of those differences on the individual service member, the military community, and American society.

Instruction: Monitored home study with written exercises, on-the-job training, and proctored examinations. Topics include the need for a military justice system; the sources of military law; the punitive provisions of the Uniform Code of Military Justice; the concept of non-judicial punishment as a corollary to the civilian concept of misdemeanor; the rulings of the USSC that impact on the Manual for Courts Martial, and the imposition of military justice. Instruction also includes reviews of specific areas of non-judicial punishment; the rights of the accused; pre-trial activities; the various types of judicial proceedings; the Military Appelate review process; and the procedure (writ of certiorari) to petition review of a military finding by the U.S. Supreme Court. Lastly, the instruction includes addenda that allow for an appreciation of the scope and breadth of the U.S. Constitution and the Uniform Code of Military Justice.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/88).

AF-1728-0044

LAW ENFORCEMENT SPECIALIST BY CORRESPONDENCE

Course Number: 81152.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/87–Present.

Learning Outcomes: Upon completion of the course the student will understand the general functions and responsibilities of an Air Force Security Police member, including the various tactics and techniques inherent in the fulfillment of enforcement.

Instruction: Monitored home study including reading, written exercises, drills, and proctored examinations. Topics include general police functions, individual and team movement, target detection and engagement, challenges and identification, search procedures, evidence protection, resource and correction programs, traffic control and operations, systems security and emergency response, defense management, antiterrorism, and threat identification.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in criminal justice (5/88).

AF-1728-0045

SECURITY SPECIALIST BY CORRESPONDENCE

Course Number: 81150.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 12/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to carry out security police functions, observation and investigation, deal with hostage situations, hijacking operations, terrorism, and to deal with nuclear security accidents.

Instruction: This is a monitored home study program, including readings, written exercises, and proctored examinations. Topics include requirements of integrity and ethics, legality, conduct of searches, maintaining systems security, how and when to use dogs, methods of riot control, and dealing with terrorism.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in criminal justice (5/88).

AF-1728-0046

FIRE PROTECTION SUPERVISOR BY CORRESPONDENCE

Course Number: 57170.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/85–Present.

Objectives: To provide up-grade training in fire protection supervision.

Instruction: This correspondence course consists of on-the-job supervision and at-home studies. The home study provides general knowledge in fire protection operations and technical services related to supervision of fire protection activities. This course consists of general instruction in fire protection safety and security programs; fire protection operations command, structural and crash firefighting; technical services related to building design and construction, and fire protection supervision activities.

Credit Recommendation: In the vocational certificate category, 2 semester hours in fire ground supervision (9/86).

AF-1729-0002

1. Cook
2. Cooking

Course Number: *Version 1:* 3ABR62230. *All Versions:* 3ABR62230-1.

Location: *Version 1:* School of Applied Sciences, Lowry AFB, CO. 3380th Technical Training Wing, Keesler AFB, MS.

Length: *Version 1:* 8-12 weeks (240-360 hours). *Version 2:* 12 weeks (480 hours).

Exhibit Dates: *Version 1:* 5/58-12/73. *Version 2:* 5/55-4/58.

Objectives: To provide enlisted personnel with basic instruction in preparing, cooking, and serving food in unit, field, and inflight kitchens.

Instruction: Food preparation; inspection and storage of supplies; dining hall and kitchen sanitation; inspection procedures; use and care of food service equipment; nutrition.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in food preparation (12/73). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in food preparation (12/73).

AF-1729-0007

Open Mess Management

Course Number: OZR6411.1; ASA62470; 10-AF-62470.

Location: Quartermaster School, Ft. Lee, VA.

Length: 7 weeks (228-231 hours).

Exhibit Dates: 8/60-12/64.

Objectives: To train officers, warrant officers and enlisted personnel who possess current food handler's certificates to perform as food service superintendents or steward supervisors.

Instruction: Lectures and practical exercises in duties of food service superintendents or steward supervisors, including operation and maintenance of equipment and facilities, storage and sanitation, management of open mess facilities (including recreational facilities), and formal events and entertainment programming; food planning and nutrition, food selection, cost control, and preparation and serving of buffet-type meals; and accounting and business law.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in institutional (culinary) management, 2 in introduction to food and nutrition (12/68).

AF-1729-0008

Baker
(Baking)

Course Number: AB62130.

Location: 3450th Technical School, Warren AFB, WY.

Length: 12 weeks (318-480 hours).

Exhibit Dates: 3/55-12/68.

Objectives: To train airmen to bake bread, rolls, pies, cookies, and other baked products.

Instruction: Lectures and practical exercises in the principles and techniques of garrison and field baking, including small-quantity kitchen, and pastry bakery (integrated training). Topics include principles of nutrition, sanitation,rations procurement and storage, bread bakery (integrated training), production bread baking shop; preparation of specific doughs, breads, and cakes; and recipe breakdown.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in food management (8/74).

AF-1729-0009

1. Diet Therapy Supervisor
2. Diet Supervisor

Course Number: *Version 1:* 3AAR62271. *Version 2:* AAR62271; AZR62271.

Location: 3750th Technical School, Sheppard AFB, TX. *Version 2:* Medical Service School, Gunter AFB, AL.

Length: *Version 1:* 5 weeks (150 hours). *Version 2:* 4-5 weeks (150-156 hours).

Exhibit Dates: *Version 1:* 9/70-12/73. *Version 2:* 9/65-8/70.

Objectives: To provide advanced career training to diet supervisory personnel.

Instruction: *All Versions:* Lectures and practical exercises in diet therapy, including regulations and manuals related to the operation of a medical food service and supervision and management of equipment, personnel, and subsistence in the operation of a food service department at Air Force medical treatment facilities. Emphasis is on subsistence accounting, cycle and selective menu planning and writing, food production and service, nutrition, and dietary treatment of diseases. *Version 1:* Topics include administration, applied therapeutic nutrition, food service management, disaster feeding, and menu costing. *Version 2:* Topics include food production and service, food service sanitation, nutrition and diet therapy, and administration.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in food management, 3 in food and beverage cost control (7/74). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in food service management (12/68).

AF-1729-0010

Apprentice Food Service Specialist by
Correspondence

Course Number: 62230.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/84-Present.

Objectives: This course provides an introduction to the food service industry, emphasizing sanitation procedures, food service equipment, food selections and preparation. Management techniques relating to the industry are also discussed.

Instruction: Instruction covers food service careers, hygiene standards, communicable diseases, nutrition and baking fundamentals. The course also examines cooking equipment, safety precautions, energy conservation, storeroom operations, stock control, and quality assurance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in food service fundementals (10/85).

AF-1729-0011

Food Service Specialist by
Correspondence

Course Number: 62250.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 4/86-Present. *Version 2:* 7/84-3/86.

Objectives: This course is a comprehensive presentation of the function and administration of the food service industry. It discusses the elements of food preparation, equipment utilization, accounting, and administrative responsibilities.

Instruction: Instruction covers sanitation standards, communicable diseases, insect and rodent controls, food preparation principles and serving line procedures. Basic principles of equipment use and maintenance as well as management responsibilities in accounting, food and beverage control are also discussed.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* LOW 2 semester hours in principle of food preparation (10/85); in the upper-division baccalaureate category, 1 semester hour in food service management (10/85).

AF-1729-0012

Food Service Supervisor by
Correspondence

Course Number: 62270.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/84-Present.

Objectives: An introductory course for food service supervisors, training is provided in the planning and scheduling of food service activities, accounting procedures, quality control and manpower requirements.

Instruction: Course covers workload scheduling, performance standards, dining hall operations, menu preparation, accounting fundamentals, sanitation, and performance evaluation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in food service management (10/85).

AF-1729-0013

Apprentice Services Specialist by
Correspondence

Course Number: 61130.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 1/83-Present.

Objectives: The purpose of this course is to provide basic information concerning the handling of a linen exchange and housing facilities in the Air Force.

instruction: This course provides basic information about inventory procedures, requisition and stock control. Also include are front desk operations such as making reservations, maintaining occupancy rate, handling sundry sales, operating cash register, maintaining equipment and handling customer complaints.

Credit Recommendation: In the vocational certificate category, 1 semester hour in introduction to hotel/motel operations (10/85).

AF-1729-0014

Services Specialist by Correspondence

Course Number: 61150.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 2/83-Present.

Objectives: This course is to provides specific information regarding responsibilities for handling linen, housing arrangements and mortuary services in the military.

Instruction: This course includes basic procedures for requisitioning, inventorying and stock control of linens. Also covered are front desk operations for housing such as reservations, handling sundry sales, operating cash register, maintaining equipment and handling customer complaints. The mortuary services content describes the military honors and ceremonies procedures, search, recovery and identification of remains; and transportation and shipment procedures of the remains.

Credit Recommendation: In the vocational certificate category, 1 semester hour in introduction to hotel/motel operations or front office procedures, 1 semester hour in institutional of housekeeping (10/85).

AF-1729-0015

Apprentice Subsistence Operations Specialist by Correspondence

Course Number: 61231.

Location: Extension Course Institute, Gunter AFS, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/84–Present.

Learning Outcomes: Upon completion of the course the student will be able to understand the organization and operations of the subsistence program of the Air Force.

Instruction: Includes specialized operations of the troop support section, commissary resale operations, control, and and Air Force Commissary Service Mission.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/87).

AF-1729-0016

Subsistence Operations Specialist by Correspondence

Course Number: 61251.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 3/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to recognize and understand the Air Force's subsistence operations and assist in the operation of commissaries and troop support subsistence.

Instruction: Instruction includes career field of subsistence operations, commissory organization and operations, control and resale functions, troop support and front-end functions.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/87).

AF-1729-0017

Subsistence Operations Technician by Correspondence

Course Number: 61271.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 10/84–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform supervisory tasks in commissaries, resale stores and also assist in subsistence supplies procurement for troop support and resource protection.

Instruction: Instruction includes career training and supervision in the subsistence operations career field. Topics covered are complex and control office operations, resale store operations, and troops support and resource protections.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/87).

AF-1730-0002

Equipment Cooling Specialist

Course Number: ABR56630B.

Location: 3750th Technical School, Sheppard AFB, TX.

Length: 23–24 weeks (600–630 hours).

Exhibit Dates: 9/58–12/68.

Objectives: To provide enlisted personnel with entry-level training in the design, operation, and maintenance of environmental systems.

Instruction: Lectures and practical exercises in the maintenance and operation of cooling systems. Course includes instruction in environmental controls from calculation of heat loads to actual operation of a five-ton air conditioning system, including component selection; water analysis; electric, pneumatic, and electronic controls; basic electricity; and the servicing of motors.

Credit Recommendation: In the upper-division baccalaureate category, 15 semester hours in air conditioning and refrigeration controls, and credit in electricity on the basis of institutional evaluation (5/74).

AF-1730-0013

Cryogenic Fluids Production Specialist

Course Number: AZR54450-1.

Location: 3345th Technical School, Chanute AFB, IL.

Length: 4 weeks (138 hours).

Exhibit Dates: 4/65–12/68.

Objectives: To train enlisted personnel to troubleshoot, maintain, and operate a small cryogenic liquid production plant.

Instruction: Lectures and practical exercises in the maintenance and operation of a small cryogenic liquid production plant. Course includes introduction to cryogenics, hazards and safety techniques, storage of cryogenic fluids, liquification process used in the oxygen-nitrogen generating plant, and troubleshooting and repair.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in refrigeration power technology (7/74).

AF-1730-0016

Refrigeration and Cryogenics Specialist by Correspondence

Course Number: 54550.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 9/84–Present.

Objectives: To train personnel in refrigeration and air conditioning installation and maintenance.

Instruction: Consists of on-the-job training and at-home study in the installation of various types of refrigeration and air conditioning systems. The home study provides training in the principles of refrigeration and air condition and the on-the-job training provides the application. The course includes electrical principles, refrigeration principles, air conditioning principles, and cryogenic operations.

Credit Recommendation: In the vocational certificate category, 6 semester hours in refrigeration and air condition installation and maintenance (9/86); in the lower-division baccalaureate/associate degree category, 2 in mechanical and electrical equipment of building (air conditioning) (9/86).

AF-1730-0017

Refrigeration and Air Condition Technician by Correspondence

Course Number: 54570.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 3/88–Present. *Version 2:* 5/80–2/88.

Objectives: To train personnel to install and supervise the installation of refrigeration and air conditioning equipment.

Instruction: Consists of on-the-job training and at-home studies. The home study provides the principles of installation and supervision of refrigeration and air conditioning equipment and the on-the-job training provides the application.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 3 semester hours in electronics (9/86).

AF-1732-0001

Engineer Environmental Support Specialist

(Water and Waste Processing Specialist)

Course Number: 3ABR56330.

Location: Technical Training Center, Sheppard AFB, TX.

Length: 12 weeks (330 hours).

Exhibit Dates: 10/65–12/73.

Objectives: To train enlisted personnel as water and waste processing specialists and support specialists in the collection, transportation, and disposal of solid waste.

Instruction: Lectures in water purification and waste disposal. Topics include basic mathematics, water and waste water analysis, operating principles of water treatment plants, specialized water treatment processes, maintenance of water and waste processing system components, collection, transportation, treatment and disposal of solid waste.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in water purification (12/68).

AF-1732-0002

Water and Waste Processing

Course Number: 4AST56350-1.

Location: Sheppard Technical Training Center, Sheppard AFB, TX.

Length: 3 weeks (90 hours).

Exhibit Dates: 10/73–12/73.

Objectives: To train enlisted personnel in water and waste treatment and processing.

Instruction: Lectures and field experience in the treatment and testing of water for human consumption and in sewage and waste disposal. Topics include clarification and filtration, chemical disinfection, ion exchange, servicing and maintaining a water purification unit, operating principles of pumps, and waste water analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in water and waste water technology (5/74).

AF-1733-0002

Fabrication and Parachute Specialist by Correspondence

Course Number: 42753.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 7/78–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot and repair or adjust industrial sewing machines. With very limited supervision, the indivudual will have acquired the knowledge for inspection, repair, and packing of aircrew survival kits, floatation equipment, and parachutes and related devices.

Instruction: Students work under supervision and a trainer or a training manager to control progress in areas of knowledge related to use of hand tools and industrial sewing machines, and nomenclature, and troubleshooting of sewing machines. The course also covers hand and machine repair of fabrics; safety considerations; and management practices for related tasks.

Credit Recommendation: In the vocational certificate category, 1 semester hour in parachute rigging, inspection, and repair, 1 in fabric repair (hand and machine), and 1 in sewing machine service and repair (10/88).

AF-2203-0001

SMALL ARMS SPECIALIST
(Marksmanship Instructor)

Course Number: 3ABR75330; 3ALR75330; ALR75330; AIR75330.

Location: School of Applied Aerospace Sciences, Lackland AFB, TX.

Length: 9-11 weeks (288-330 hours).

Exhibit Dates: 9/59-12/73.

Objectives: To train personnel to serve as marksmanship instructors.

Instruction: Lectures and practical exercises in classroom instruction, lesson planning, practice teaching, and marksmanship.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in instructional methods (12/68).

AF-2203-0007

UNIT HISTORIAN DEVELOPMENT

Course Number: LMDC 900.

Location: Leadership and Management Development Center, Air University, Maxwell AFB, AL.

Length: 3 weeks (120 hours).

Exhibit Dates: 9/73-1/90.

Objectives: To train airmen to perform the duties of unit historians, including responsibility for archival management, period analytical historical narratives, primary document evaluation and research methodology, oral history, and routine record keeping and management.

Instruction: Lectures, seminars, interviews, and exercises in Air Force history and organization, document research, historical methods and evaluation, research methodology, oral history, office administration, security procedures, independent research and writing using primary material in the principal United States military aviation historical repository.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours as an elective in history (8/76).

AF-2203-0009

SENIOR NONCOMMISSIONED OFFICER
(NCO) ACADEMY

Course Number: None.

Location: Air University, Gunter AFB, AL.

Length: 9 weeks (227-244 hours).

Exhibit Dates: 1/73-2/89.

Objectives: To prepare senior noncommissioned officers for expanded leadership and management roles by broadening their perspective of the military profession and its place in domestic and international affairs.

Instruction: Seminars, lectures, and directed individual study in communications, world affairs, leadership and management as applied to the military environment. The communications phase includes both written and oral exercises in writing, speaking, and reasoning skills. The military environment phase provides knowledge of the U.S. role in international affairs, including a comparison of major political and economic systems. The management phase treats principles and functions of management emphasizing the planning, programming and budgeting aspects. Significant study is devoted to increasing understanding of personnel systems and effective human resource management with emphasis on current behavioral science concepts. Student-centered instructional techniques include role playing, video-assisted instruction, programmed learning and panel presentations.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in contemporary world affairs, 4 in management and human relations (11/75).

AF-2203-0035

SQUADRON OFFICER SCHOOL
CORRESPONDENCE PROGRAM

Course Number: None.

Location: Air University, Maxwell AFB, AL.

Length: Maximum 104 weeks.

Exhibit Dates: 10/82-Present.

Objectives: To prepare junior officers for leadership and management roles required of Air Force personnel in a dynamic domestic and international political environment.

Instruction: This correspondence course presents an introduction to management, an introduction to national security studies and to basic communication skills.

Credit Recommendation: Credit on the basis of institutional evaluation, departmental interview or demonstrated skills (3/83).

AF-2203-0040

1. OFFICER CANDIDATE SCHOOL
2. USAF OFFICER CANDIDATE SCHOOL

Course Number: *Version 1:* O4M0101; OC-00100.

Location: Air Training School, Lackland AFB, TX.

Length: *Version 1:* 24-25 weeks (960-1000 hours). *Version 2:* 24 weeks (960 hours).

Exhibit Dates: *Version 1:* 1/57-12/68. *Version 2:* 9/55-12/56.

Objectives: To train officer candidates to develop the professional knowledge, character, and personal attributes and attitudes essential to being an officer.

Instruction: Lectures and practical exercises in the duties of an officer. Course includes political geography, international affairs, introduction to astronautics, communications, Air Force organization, leadership, human relations, moral dynamics, and selected military subjects.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in political science, 3 in business organization and management, and credit in advanced military at institutions which regularly offer such credit (12/68). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in business organization and management, and credit in advanced military at institutions which regularly offer such credit (12/68).

AF-2203-0041

SQUADRON OFFICER SCHOOL
(Squadron Officer Course)

Course Number: None.

Location: Air University, Maxwell AFB, AL.

Length: *Version 1:* 8-9 weeks (250-295 hours). *Version 2:* 11-14 weeks (440-500 hours). *Version 3:* 10-14 weeks (452-596 hours).

Exhibit Dates: *Version 1:* 10/80-Present. *Version 2:* 9/70-9/80. *Version 3:* 3/54-8/70.

Objectives: To prepare selected junior officers for leadership and management roles, required of Air Force personnel in a dynamic domestic and international political environment.

Instruction: *Version 1:* Seminars, lectures, and experiential exercises in introduction to management including leadership, group process and interpersonal relations, problem solving, counseling, motivation and human resource management. The communicatons area develops the individual's written and oral skills. National security studies and military strategy incude an introduction to international relations, strategic theory strategic and general purpose forces of the U.S. and its allies and an analysis of the defense posture and strategy of the Soviet Union and the Warsaw Pact. Competitive sports emphasizes group problem solving, organizing, communication and leadership as well as practice in sports fundamentals, strategy and organization. In all phases of the program, student-centered instructional activities include role playing, video- and computer-assisted instruction and programmed learning. *Version 2:* Seminars, lectures and field exercises in communication, leadership, management, group dynamics, foreign policy and military strategy. The communication area develops the individual's skills to solve problems logically and effectively. The leadership and management area emphasizes attributes, principles, techniques and concepts required in the utilization of personnel, money and materiel. Human relations, individual and group behavior patterns and motivation are emphasized. The foreign policy and military strategy area emphasizes the capabilities and employment concepts of military force, and includes a comparison of major political systems and international implications of military power.Student-centered instructional activitied include role playing, video-and computer-assisted instruction and programmed learning. *Version 3:* Seminars, lectures and field exercises in communication, leadership, management, group dynamics, foreign policy and military strategy. The communications area develops the individuals skills to solve problems logically and effectively. The leadership and management area emphasizes attributes, principles, techniques and concepts required in the utilization of personnel, money and materiel. Human relations, individual and group behavior patterns and motivation are emphasized. The foreign policy and military strategy area emphasizes the capabilities and employment concepts of military force, and includes a comparison of major political systems and international implications of military power. Student-centered instructional activities include role playing, video- and computer-assisted instruction and programmed learning.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to management, 3 in communication skills in management (3/83); in the upper-division baccalaureate category, 3 semester hours in national security studies and military strategy, 3 in competitive sports (3/83). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in communications in management, 3 in organizational leadership and management, 3 in human relations and group dynamics, and 3 in foreign policy and military strategy (11/75). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in speech, and credit in political science on the basis of institutional evaluation (12/68).

AF-2203-0051

Air National Guard Academy of Military Science

Course Number: YAMS-000.

Location: Air National Guard Support Center, Knoxville, TN.

Length: 6 weeks (296 hours).

Exhibit Dates: 5/71-Present.

Objectives: This course provides the student with an understanding of the interaction of economic and political determinants of power and military strategy and decisions. It also provides knowledge of the processes and function of management and the role of communication affecting management and leadership.

Instruction: Lectures, seminars, laboratory experiences and applied experiences in management, leadership, and in communication. There are also lectures and seminars on defense studies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hours in defense studies, 3 in management (leadership and communications) (8/86).

AF-2203-0052

First Sergeant by Correspondence

Course Number: 1090.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 4/85-Present.

Learning Outcomes: At the conclusion of the course the student will know the duties and responsibilities of a first sergeant, understand the policies and procedures involving the duties and responsibilities of the first sergeant, and have a working knowledge of military justice.

Instruction: This course is primarily a summary of an Air Force first sergeant's duties and responsibilities, and the relevant policies, procedures, and military justice regulations.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (2/87).

AF-2203-0053

Air Force Technical Order System by Correspondence

Course Number: 1200.

Location: Extension Course Institute, Gunter Air Force Station, AL.

Length: Maximum 52 weeks.

Exhibit Dates: 5/80-Present.

Learning Outcomes: Upon completion of the course, the student will understand the administration, the necessity, and the acquisition of technical orders, comprehend and will use technical orders in his job assignements.

Instruction: Includes information about technical orders for the Air Force, covering the administration, types, issuance, numbering system, filing, use, and inmprovement. It also includes the distribution system of technical orders, establishing requirements, documentation and the checking of technical order files.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (2/87).

AF-2203-0054

Combat Arms Training and Maintenance Specialist/Technician by Correspondence

Course Number: 75350.

Location: Extension Course Institute, Gunter, Air Force Station, AL.,

Length: Maximum 52 weeks.

Exhibit Dates: 3/71-Present.

Learning Outcomes: Upon completion of the course, the student will be able to establish and maintain a small arms training program with minimal supervision. Program could be appropriate at the community college level or in a law enforcement unit.

Instruction: This course consists of self-paced, independent study with open-book progress checks and satisfactory completion of a proctored comprehensive final examination. Content areas include combat arms operations and facility management, marksmanship fundamentals, fundamentals of instruction, conduct of training, training aids, evaluation and measurement, and maintenance and repair of small arms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in small arms instruction (12/89).

Course Exhibits

CG

CG-0419-0001

Merchant Marine Safety Indoctrination School

Course Number: None.

Location: Coast Guard Academy, New London, CT; Reserve Training Center, Yorktown, VA.

Length: 12 weeks (340 hours).

Exhibit Dates: 2/61-12/68.

Objectives: To prepare officers for assignment to duty in a marine inspection office.

Instruction: Introduction to marine inspection; merchant marine investigation and revocation proceedings; licensing and certifying of merchant marine personnel; naval architecture and ship construction; regulations for passenger, cargo, tank, and uninspected vessels; dangerous cargo, load line, and marine and electrical engineering regulations; equipment specifications; welding; hull and boiler vessel inspection; dry-dock and vessel repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in transportation operations (12/68).

CG-0419-0002

HC-130 Loadmaster (AC130L) by Correspondence

Course Number: 447-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 7/78-Present.

Objectives: Provides specialized training as loadmaster on HC-130 aircraft.

Instruction: Presents familiarization on HC-130 aircraft, aircraft engines, props and prop systems, ground handling and and servicing, Loadmaster duties, and aircraft loading equipment and furnishings. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in weight and balance and aircraft loading (5/85).

CG-0701-0001

Dental Technician A School

Course Number: None.

Location: Coast Guard Training Center, Cape May, NJ.

Length: *Version 1:* 12 weeks (387-433 hours). *Version 2:* 12 weeks (423 hours).

Exhibit Dates: *Version 1:* 1/74-12/82. *Version 2:* 2/73-12/73.

Objectives: To provide basic techniques and skills required for dental assisting.

Instruction: *All Versions:* Lectures and practical experience in chairside assisting, basic radiology techniques, prophylaxis, operating room assisting, dental anatomy, first aid, preventive dentistry, and dental office administration. *Version 1:* Students learn to prepare patients for dental treatment, and can identify, sharpen, care for and set-up instruments for all phases of dentistry. They can sterilize instruments and materials. Students learn to instruct in proper daily oral health, scale and polish teeth, apply cariostatic agents, render emergency casualty treatment; expose, process and mount periapical, bitewing, and occlusal films employing proper procedures and precautions for use of radiographic equipment, explain the structure and function of the human body, particularly the head, neck and oral structures as a requisite to the treating of sick and managing emergency injury situations, and perform routine administrative duties.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic dental assisting, 4 in dental clinical experience ((8/79). *Version 2:* Credit is not recommended because of the limited specialized nature of the course (2/74).

CG-0701-0002

Dental Technician, Class C

Course Number: None.

Location: Coast Guard Training Center, Cape May, NJ.

Length: 5 weeks (177 hours).

Exhibit Dates: 1/83-Present.

Objectives: To train personnel in chairside dental assisting, dental radiography and their related aspects.

Instruction: Lectures, laboratory and clinical experiences in dental anatomy, chairside assisting, oral pathology, radiography, and supervised clinical training.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in dental anatomy, 2 in chairside assisting, 1 in radiology, and 2 in clinical experience (6/83).

CG-0701-0003

Dental Technician Second Class (DT2) by Correspondence

Course Number: 218-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 52 weeks maximum.

Exhibit Dates: 4/82-12/85.

Objectives: To provide the knowledge and skills required to function as a second class dental technician.

Instruction: Topics covered include dental sick call, emergency procedures, pharmacology, preventive medicine, radiography, dental assisting procedures, and sterilization. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in dental procedures and techniques (10/87).

CG-0701-0004

Dental Technician First Class (DT1) by Correspondence

Course Number: 118-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 52 weeks maximum.

Exhibit Dates: 5/80-12/85.

Objectives: To provide knowledge and skills to provide advanced services as a first class dental technician.

Instruction: Topics include x-rays in dentistry, clerical procedures for dental personnel, and preventive and corrective maintenance of dental equipment. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in dental care and administration (10/87).

CG-0703-0001

Basic Hospital Corpsman, Class A (HM A School)

Course Number: G1009.

Location: Coast Guard Academy, New London, CT.

Length: 16 weeks (640 hours).

Exhibit Dates: *Version 1:* 4/80-12/82. *Version 2:* 4/74-3/80.

Objectives: To train enlisted personnel in the basic principles and techniques necessary to provide direct patient care to the sick and injured with the main emphasis on independent duty.

Instruction: Instruction includes general anatomy and physiology, medical and surgical conditions, preventive medicine, principles and techniques of patient care, medical records administration, medical mathematics and pharmacology, laboratory techniques, instructional and leadership techniques, first aid, military and administrative regulations and supervised clinical experiences.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 2 in health care practices and procedures, 2 in environmental medicine, 4 in emergency medicine, 2 in pharmacology, 1 in laboratory practices, 4 in medical records administration, 3 in clinical experience and 4 in medical, surgical and psychiatric conditions (6/83). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in anatomy and physiology, 2 in pharmacology, 2 in health and hygiene or preventive medicine, 2 in emergency medical techniques, 3 in nursing techniques, and 4 in clinical practicum (11/77).

CG-0709-0001

Hospital Corpsman (HM)

Course Number: None.

Location: Hospital Corpsman School, Groton, CT.

Length: 24 weeks (800 hours).

Exhibit Dates: 10/60-12/67.

Objectives: To train personnel in the fundamental principles of health and nursing.

Instruction: Nursing; anatomy and physiology; first aid, preventive medicine; materia medica and therapeutics; medical administration; medicine; pharmacy; chemistry; laboratory; dental; x-ray; clinical experience.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in hygiene, sanitation and first aid and 2 in anatomy and physiology (12/68).

CG-0709-0002

Emergency Medical Technician

Course Number: None.
Location: Training Center, Petaluma, CA.
Length: 2-3 weeks (104 hours).
Exhibit Dates: 2/79-7/85.

Objectives: To train personnel, especially those engaged in search and rescue activities, to provide basic life support and emergency medical care.

Instruction: Course provides lectures and laboratories covering legal aspects of emergency care; anatomy and physiology of the respiratory and cardiopulmonary systems, use of oropharyngeal airways, suction equipment, oxygen delivery systems, and assisted ventilation devices; the signs and symptoms of patients suffering from various injuries to the face, chest, abdomen, genitalia, head and spine, and of patients suffering from cardiac problems, dyspnea, acute abdominal problems, strokes, poisoning, stings, bites, diabetic emergencies and seizure disorders, heat cramps, heat exhaustion, alcohol and drug abuse, emotional disturbances, rape, and burns; student will learn proper treatment and response to the above. Total proficiency will be required to pass examinations in C.P.R., dressing and bandaging techniques, splinting techniques, and measuring vital signs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in first aid or emergency technology (8/79).

CG-0709-0003

Health Services Technician, Class A

Course Number: None.
Location: Coast Guard Academy, Groton, CT.
Length: 19 weeks (749-759 hours).
Exhibit Dates: 1/83-6/83.

Objectives: To train enlisted personnel in the basic principles and techniques needed to provide direct patient care to the sick and injured with the main emphasis on independent duty.

Instruction: Instruction includes general anatomy and physiology, medical and surgical conditions, preventive medicine, principles and techniques of patient care, medical administration, medical mathematics and pharmacology, laboratory techniques, instructional and leadership techniques, first aid, military and administrative regulations, introductory aspects of dental assisting and supervised clinical experiences.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 1 in introduction to health services, 4 in emergency medicine, 2 in preventive medicine, 3 in medical administration, 2 in pharmacology, 2 in laboratory practices, 2 in medical, surgical and psychiatric conditions, 2 in clinical experience and 3 in introduction to dental assisting (6/83).

CG-0709-0004

Emergency Medical Technician Class C

Course Number: None.
Location: Coast Guard Training Center, Petaluma, CA.
Length: 2-3 weeks (117 hours).
Exhibit Dates: 8/85-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform as an entry-level emergency medical technician with the capacity for assessing requirements for emergency care, administering emergency care, stabilizing a patient's condition, and acting to minimize further injury and discomfort.

Instruction: This course, utilizing lectures, simulation, and laboratory experience, covers legal aspects of emergency care, anatomy and physiology of the cardiac and respiratory systems, use of oropharyngeal airways, suction equipment, oxygen delivery systems and other ventilation devices; the signs and syptoms of patients suffering from cardiac problems, dysapnea, acute abdominal problems, poisoning, stings, bites, diabetic emergencies and seizure disorders, heat cramps, heat exhaustion, alcohol and drug abuse, emotional disturbances, rape and burns. Student will learn proper treatment and response to the above. Total proficiency will be required through examinations in CPR, dressing and bandaging techniques, splinting techniques, and the measurement of vital signs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in emergency technology (7/87).

CG-0709-0005

Health Services Technician Second Class (HS2) by Correspondence

Course Number: 0230-1; 0230.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 52 weeks maximum.
Exhibit Dates: 1/86-Present.

Objectives: To provide knowledge and skills to perform as a second class health services technician.

Instruction: Topics include physical diagnosis and treatment, emergency medicine, occupational health, preventive medicine, basic cost techniques, pharmacy, medical laboratory, x-ray, and health services organization and administration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in health care procedures and techniques (10/87).

CG-0709-0006

Health Services Technician First Class (HS1) by Correspondence

Course Number: 0130-1; 0110.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 52 weeks maximum.
Exhibit Dates: 1/86-Present.

Objectives: To provide the knowledge and skills to provide advanced services as a health care technician.

Instruction: Topics include physical examinations, microbiology and parasitology, occupational health, splints and casting, and medical administration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in health care procedures and administration (10/87).

CG-0709-0007

Hospital Corpsman First Class (HM1) by Correspondence

Course Number: 131-5.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 52 weeks maximum.
Exhibit Dates: 5/69-12/85.

Objectives: To teach the knowledge and skills to provide advanced services as a hospital corpsman.

Instruction: Topics include physical examinations, microbiology and parasitology, occupational health, splints and casting, and medical administration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in health care procedures and administration (10/87).

CG-0709-0008

Hospital Corpsman Second Class (HM2) by Correspondence

Course Number: 231-8.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 52 weeks maximum.
Exhibit Dates: 5/82-12/85.

Objectives: To provide knowledge and skills to perform as a second class hospital corpsman.

Instruction: Topics include physical diagnosis and treatment, emergency medicine, occupational health, preventive medicine, basic cost techniques, pharmacy, medical laboratory, x-ray, and health services organization and administration.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in health care procedures and techniques (10/87).

CG-0709-0009

Health Services Technician (HS) Class A

Course Number: None.
Location: Coast Guard Academy, New London, CT.
Length: 24 weeks (886 hours); medical phase, 15 weeks; dental phase, 5 weeks; clinical experience, 4 weeks.
Exhibit Dates: 7/83-Present.

Learning Outcomes: Upon completion of the course, the student will be able to provide direct patient care including prevention and treatment of disease and injuries, provision of basic dental care, and to carry out administrative assignments as appropriate.

Instruction: Topics include general anatomy and physiology, medical and surgical conditions, preventive medicine, principles and techniques of patient care, medical administration, medical mathematics and pharmacology, laboratory techniques, first aid, military and administrative regulations, introductory aspects of dental assisting, pathology, radiography, and supervised clinical experience. NOTE: The Health Services Technician rating was formerly a combination of the Hospital Corpsman (HM) and Dental Technician (DT) ratings. In order to qualify for the HS rating, new recruits complete all 24 weeks of this course; those who held the DT rating take the 19-week medical course (15 weeks classroom instruction and 4 weeks clinical experience); those who held the HM rating take the 9-week dental course (5 weeks classroom instruction and 4 weeks clinical experience). Partial credit may be awarded accordingly.

Credit Recommendation: For the 24-week course: In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 1 in introduction to health services, 5 in emergency medicine, 2 in preventive medicine, 2 in medical administration, 2 in pharmacology, 3 in laboratory practices, 3 in medical-surgical procedures, 2 in general health-oriented clinical experience, 1 in dental anatomy, 2 in chairside assisting, 1 in radiology, and 2 in dental clinical experience (10/87). For the 19-week medical course: In the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 1 in introduction to health services, 5 in emergency medicine, 2 in preventive medicine, 2 in medical administration, 2 in pharmacology, 3 in laboratory practices, 3 in medical-surgical procedures, and 4 in general health-oriented clinical experience (10/87). For the 9-week dental course: In the lower-division baccalaureate/associate degree category, 1 semester hour in dental anatomy, 2 in chairside assisting, 1 in radiology, and 4 in dental clinical experience (10/87).

CG-0801-0001

SMALL CUTTER DAMAGE CONTROL

Course Number: DC-3.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (75-76 hours).

Exhibit Dates: 11/88-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform tests to detect the presence of chemical and biological agents and radiation; perform decontamination duties; calculate displacement and moment to trim; plot an uncorrected stability curve, calculate sine and cosine corrections, correct the stability curve; log angle of final list, compute effects of partial flooding; compute effects of longitudinal weight movements; perform tests to detect oxygen, explosive gases, toxic vapors; and will be able to state the methods of ventilation.

Instruction: Lectures, demonstration, and practical exercises cover chemical, biological, radiological detection; CBR decontamination; mathematical calculations relating to ship stability; oxygen, explosive, and toxic vapor gas detection; and fire extinguishing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in toxic materials and other gases detection, decontamination, and ventilation, and 2 in fundamentals of mathematics (8/90).

CG-0802-0001

BOATING SAFETY BY CORRESPONDENCE

Course Number: 417-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 11/78-1/85.

Objectives: To provide training in the area of boating safety activities (patrols, law enforcement, inspection, public education) to persons whose duties require a knowledge of the area. Student will read and study textual materials, answer lesson questions both in course book and text and pass comprehensive proctored end-of-course examination.

Instruction: Topics covered include jurisdiction, laws, numbering, registration, documentation and licensing, legal requirements and rules of the road, negligent operation, correction of hazardous conditions, motor boat examination techniques, C.G. 4100 and warnings, arrest, state boating safety program and USCG auxiliary, boating accidents, marine events and regattas, and water pollution.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in elements of marine law and safety regulations (5/79).

CG-0802-0002

1. MARINE SAFETY BASIC INDOCTRINATION
2. MERCHANT MARINE SAFETY

Course Number: None.

Location: Reserve Training School, Yorktown, VA.

Length: 11-12 weeks (243-418 hours).

Exhibit Dates: *Version 1:* 3/78-10/84. *Version 2:* 11/65-2/78.

Objectives: To train merchant marine personnel in the laws, regulations and policies governing marine safety.

Instruction: *All Versions:* Lectures and practical exercises in ship construction, engineering materials, welding, non-destructive testing, hull repair, boilers and pressure vehicles, piping systems, lifesaving equipment, deck and electrical inspection, fire protection, engineering inspection, licensing, casualty investigation, and safety. *Version 1:* The course is divided into two phases. Phase I is 8 weeks in length and covers commercial vessel safety functions as cited above. Phase II is four weeks in length and covers port safety law enforcement and environmental protection functions.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in marine safety for phase I, 2 semester hours in marine environmental safety, and 1 in port terminal management for phase II, for a total of 6 semester hours in marine safety and 1 in port terminal management (12/79). *Version 2:* In the vocational certificate category, 4 semester hours in marine safety (6/75).

CG-0802-0003

FUNDAMENTAL SEARCH AND RESCUE (SAR) CLASS C

(Search and Rescue (SAR) Class C)

(Search and Rescue)

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 3-4 weeks (115-134 hours).

Exhibit Dates: *Version 1:* 1/80-2/86. *Version 2:* 11/77-12/79. *Version 3:* 9/66-10/77.

Objectives: To train personnel in search and rescue procedures.

Instruction: *Version 1:* Classes cover the organization, documentation, public information and legal aspects of the search and rescue process including satellite and international rescue facilities. Practical exercises in search and rescue planning, rescue equipment and techniques and special and precautionary missions is included. *Version 2:* Covers organization, documentation, public information and legal aspects of the process. *Version 3:* Lectures and practical exercises in search and rescue facilities, search planning, conduct of the search, rescue equipment and techniques, and precautionary and special missions.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in basic navigation, 3 in elective credit in search and rescue or 1 in basic navigation and 3 in personnel systems management (2/83). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours of elective credit in search and rescue (8/78). *Version 3:* Credit is not recommended because of the limited specialized nature of the course (6/75).

CG-0802-0004

NATIONAL BOATING SAFETY

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 2 weeks (68 hours). *Version 2:* 6 weeks (210 hours).

Exhibit Dates: *Version 1:* 3/83-6/84. *Version 2:* 9/72-2/83.

Objectives: To train personnel in boating safety procedures and regulations.

Instruction: *Version 1:* Lectures and practical experience including boating safety; federal laws; definition and terminology; equipment for various craft; boating communication and lighting; first aid and survival techniques; boarding procedures and techniques; and rulesof the road. *Version 2:* Lectures and practical exercises to include boating safety; federal laws; definitions and terminology; equipment for various craft; boating communication and lighting; first aid; boarding procedures and techniques; and rules of the road.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in federal and state boating regulation (7/84). *Version 2:* In the vocational certificate category, 4 semester hours in federal and state boating safety inspection (7/74).

CG-0802-0005

RESCUE COORDINATION CENTER FOR RESERVISTS

(RCC Reservists)

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (75 hours).

Exhibit Dates: 3/78-1/90.

Objectives: To provide training in the duties of a search and rescue mission coordinator and rescue coordination center controller.

Instruction: Course includes lectures and laboratory exercises in search and rescue planning and facilities.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (8/78).

CG-0802-0006

HAZARDOUS CHEMICALS TRAINING

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (105 hours).

Exhibit Dates: 6/78-6/84.

Objectives: To instruct Coast Guard personnel with extensive experience in marine safety in the hazards of transporting and handling chemicals and petroleum products, inspection techniques required for hazardous cargo, the duties of on-scene coordinator and the requirements for occupational safety as pertains to chemicals and petroleum products.

Instruction: Lectures and practical exercises on hazardous chemical regulations, physical, chemical and toxicological properties of hazardous chemicals, hazardous cargo vessel and terminal arrangements, duties of on-scene coordinator, study of previous hazardous cargo accidents and inspection requirements for vessels, terminals and transfer equipment.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in marine/industrial safety (12/79).

CG-0802-0007

HU 25A Avionicsman by Correspondence
(Search and Rescue (SAR) Aircrew HU-25A Avionicsman (ACH25A) by Correspondence)

Course Number: 0512-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 10/84–Present.
Objectives: To give students a working knowledge of the aircraft, selected systems and emergency procedures.
Instruction: Military personnel must be supervised by qualified HU-25A (Falcon aircraft) avionicsman instructor to complete the course. Course includes communication, equipment location, internal sensor system, radar and LORAN familiarization, indicators and annunciator location. Students are required to successfully complete a proctored final examination.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/86).

CG-0802-0008

Search and Rescue (SAR) HU-25A Basic Aircrew (ACG25B) by Correspondence

Course Number: 0513-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: Maximum 104 weeks.
Exhibit Dates: 10/84–Present.
Objectives: To provide student with aircraft familiarization and crew duties of the Falcon aircraft (HU-25A).
Instruction: Instruction in aircraft familiarization, crew duties, types of flight and maintenance inspections, emergency procedures, communications and ground handling procedures. Students are required to complete a proctored end-of-course examination.
Credit Recommendation: In the vocational certificate category, 1 semester hour in aircraft familiarization, ground handling, inspection, and emergency procedures (5/85).

CG-0802-0009

Basic Search and Rescue (BASAR) by Correspondence

Course Number: 422-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 1/83–Present.
Objectives: To provide personnel with a basic knowledge of search and rescue procedures.
Instruction: Course introduces the student to fundamental search and rescue (SAR) procedures and terminology, basic SAR patterns and techniques used by ships and aircraft in conducting a search. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic navigation and 1 in community safety (5/85).

CG-0802-0010

Search and Rescue (SAR) by Correspondence

Course Number: 409-5; 409-4.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 3/80–Present.
Objectives: To train personnel to plan and execute a search and rescue mission.
Instruction: Course provides basic instruction on the authority and organization of search and rescue (SAR) with a focus on actions to be taken in SAR incidents: rescue coordination center, SAR communications, search planning and patterns, aircraft emergency procedures over water and international SAR obligations under the International Civil Aviation Organization. The "National Search and Rescue Manual" is the primary text used in the course.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in advanced navigation and 2 in community safety (1/86).

CG-0802-0011

Safety and Security of the Port (PSGEN) by Correspondence

Course Number: 429-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 3/81–Present.
Objectives: To provide training in the safety of port and pier areas regulated by the Coast Guard.
Instruction: Course covers the topics of recognition and identification of safety hazards including fire, electrical, cargo loading, vehicle use and storage and waste material controls. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: In the vocational certificate category, 1 semester hour in industrial safety and health (5/85).

CG-0802-0012

Basic Search and Rescue (SAR) Aircrewman (ACBSC) by Correspondence

Course Number: 440-2.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 6/78–Present.
Objectives: To provide training in aircraft familiarization and ground handling and safety procedures.
Instruction: Topics include ground handling and firefighting, crew survival, rescue equipment, pyrotechnics, basic communications, and navigation. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: In the vocational certificate category, 2 semester hours in aircraft familiarization and ground handling and safety (5/85).

CG-0802-0013

Explosive Handling Supervisor

Course Number: MS 496R; MS 426R.
Location: Marine Safety School, Yorktown, VA.
Length: 2 weeks (87–88 hours).
Exhibit Dates: 10/84–Present.
Objectives: To train Coast Guard personnel to supervise explosive cargo handling operations at military and commercial ports.
Instruction: Lectures and practical experience in explosive properties, occupational safety, permits and cargo handling operations.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/86).

CG-0802-0014

National Boating Safety

Course Number: NBSC.
Location: Reserve Training Center, Yorktown, VA.
Length: 2 weeks (69 hours).
Exhibit Dates: 7/84–Present.
Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of a law enforcement officer in boarding safety procedures and regulations.
Instruction: Includes lectures in federal laws and regulations, vessel equipment requirements, boating accident reporting and investigation, stolen boats detection, intoxication, identification, and boating safety instructor training.
Credit Recommendation: In the vocational certificate category, 3 semester hours in federal and state boating regulations (4/89); in the lower-division baccalaureate/associate degree category, 1 semester hours in instructor methods or teaching methods (4/89).

CG-0802-0015

Marine Safety Explosive Handling Supervisor

Course Number: MS 496R.
Location: Reserve Training Center, Yorktown, VA.
Length: 2 weeks (60–80 hours).
Exhibit Dates: 9/84–Present.
Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of an explosive handling supervisor as a part of the port operations department at marine safety units or big mobilization billets.
Instruction: Includes lectures, demonstrations, simulations, and practical exercises in verification of compliance with federal regulations for the safe handling of commercial and military explosives; topics include packaged hazardous material regulations, military explosives regulations, international maritime organization dangerous goods code, permit processing, vessel preload examinations, supervision of cargo operations and the requirements for proper blocking and bracing of cargo.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in industrial security, transportation safety, or hazardous materials (4/89).

CG-1303-0001

Marine Environmental Protection (MEP) by Correspondence

Course Number: 611-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 5/81–Present.
Objectives: To provide training in marine environmental protection and investigations of oil pollution.
Instruction: Topics include contingency planning, containment and recovery equipment, oil pollution investigations, identification of chemical pollutants, on-scene coordination and pollution cleanup monitoring. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in oil and chemical spill control (5/85).

CG-1304-0001

1. Marine Science Technician A
2. Marine Science Technician Class A
3. Class A Marine Science Technician
4. Marine Science Technician

Course Number: None.

Location: *Version 1:* Reserve Training Center, Yorktown, VA. *Version 2:* Reserve Training Center, Yorktown, VA. *Version 3:* Reserve Training Center, Yorktown, VA. *Version 4:* Coast Guard Training Center, Governors Island, NY.

Length: *Version 1:* 10 weeks (362 hours). *Version 2:* 7-8 weeks (233 hours). *Version 3:* 13-14 weeks (475-510 hours). *Version 4:* 16-19 weeks (385-593 hours).

Exhibit Dates: *Version 1:* 10/84-10/88. *Version 2:* 11/82-9/84. *Version 3:* 6/78-10/82. *Version 4:* 6/69-5/78.

Objectives: To train qualified nonrated Coast Guard personnel in environmental data collection, physical and chemical science, and data processing, and to perform basic observations and analyses.

Instruction: *Version 1:* Introductory level lectures and practical exercises in mathematics, computer use, physics, marine chemistry and environmental science. *Version 2:* Lectures and practical experience in the following areas at the introductory level: mathematics, physical chemistry, environmental science, data processing and meteorology. *Version 3:* Lectures, programmed instructions in basic physical science, practical experience making and processing meteorological surface observations, oceanographic salinity, temperature-depth profiles, techniques of in-situ sampling of ocean water, determinations of salinity and oxygen content of water samples and techniques of bathymetric operations. *Version 4:* Lectures and practical experience in meteorology, principles of physical and chemical oceanography and the air-sea interface, and problems in marine science technology.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in basic seamanship (4/86); in the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to word processing, 3 in introduction to oceanography, 3 in introduction to computer science and 3 in basic chemical analysis (4/86). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in physical science (7/84). *Version 3:* In the vocational certificate category, 6 semester hours in marine instrumentation (12/79); in the lower-division baccalaureate/associate degree category, 6 semester hours in marine science and 3 in meteorological operations (12/79). *Version 4:* In the vocational certificate category, 4 semester hours in marine instrumentation (12/73); in the lower-division baccalaureate/associate degree category, 4 semester hours in marine sciences (12/73); in the upper-division baccalaureate category, 3 semester hours in oceanography (12/73).

CG-1304-0002

Oceanographic Technician

Course Number: None.

Location: Oceanographic School, Groton, CT.

Length: 8-9 weeks (323-359 hours).

Exhibit Dates: 4/66-12/68.

Objectives: To train enlisted personnel in the fundamentals of oceanography.

Instruction: Lectures and practical experience in the fundamentals of biological, chemical, and physical oceanography essential to the operation of instruments for gathering data at sea.

Credit Recommendation: In the vocational certificate category, 4 semester hours in oceanography (12/73); in the lower-division baccalaureate/associate degree category, 4 semester hours in oceanography (12/73); in the upper-division baccalaureate category, 3 semester hours in oceanography (12/68).

CG-1304-0003

Marine Science Technician Second Class by Correspondence

Course Number: 234-2; 234-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 3/72-5/86.

Objectives: To familiarize the student with marine scienceequipment and instrumentation needed in observing, recording, encoding, and decoding oceanographic and meteorological data.

Instruction: The course includes a review of appropriate mathematics and basic physics; the hydrosphere and atmosphere are described. The instruments used to measure relevant attributes of the hydrosphere and atmosphere are described and their reading and codes are discussed. How this data is entered into the computer and processed for certain analysis is demonstrated. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorology, 2 in technical mathematics (7/86).

CG-1304-0004

Celestial Navigation Second Class by Correspondence

Course Number: 463-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 2/77-6/86.

Objectives: To provide training in celestial navigation.

Instruction: This nonresident course consists of ten lessons including coordinate systems, time, description of marine sextant, use of the nautical almanac and H.O. Tables 229, the celestial fix and running fix, the Rude starfinder, and how to determine gyro error at sea. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in celestial navigation (5/79).

CG-1304-0005

Oceanography by Correspondence

Course Number: 407-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 4/72-9/80.

Objectives: To introduce students to basic oceanographic studies.

Instruction: This nonresident course requires a textbook, oceanographic manual, course book with eight lessons, and a comprehensive proctored end-of-course examination. The course includes geological, biological and physical oceanography, and provides descriptions of basic sampling procedures and processing of oceanographic data.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in basic nonlaboratory oceanography (5/79).

CG-1304-0006

Ice Observer by Correspondence

Course Number: 476-2; 476-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 4/78-Present.

Objectives: To train Coast Guard personnel to observe land and sea ice concentrations and topographical conditions and to report these observations to superiors.

Instruction: A brief nonresident course to cover responsibilities in ice breaking, to describe basic ice breaking and ice reconnaissance procedures. Course teaches stages of water freezing and thawing and provides analysis of ice charts.

Credit Recommendation: Credit is not recommended because of the limited technical nature of the course (12/86).

CG-1304-0007

Quartermaster First Class (QM1) by Correspondence

Course Number: 137-8; 137-5; 137-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 10/79-8/85. *Version 2:* 8/69-9/79.

Objectives: To provide training for prospective quartermasters in communication and coastal and celestial navigation.

Instruction: *Version 1:* Topics include ship conning, compasses and compass systems, piloting and dead reckoning, navigation by electronic equipment, celestial navigation, and basic search and rescue.Proctored final examination is required. *Version 2:* This nonresident course covers ship conning, naval communications, rules of the road, compasses and degaussing, piloting and navigation (including celestial), and meteorology. There is a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in celestial navigation, 2 in coastwise navigation and piloting (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in coastwise navigation and piloting, 2 in applied meteorology, 2 in celestial navigation (5/79).

CG-1304-0008

Meteorology by Correspondence

Course Number: 475-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/75-Present.

Objectives: To expose personnel to the various aspects of weather and to enable them to perform basic forecasting.

Instruction: This nonresident course includes weather warnings and displays, worldwide wind patterns, clouds, weather instruments, air masses, frontal systems, storms, fog, icing problems, waves, and forecasting methods. Course has proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorology (5/79).

CG-1304-0009

Weather Briefer

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (90-105 hours).

Exhibit Dates: 2/78-10/86.

Objectives: To train Coast Guard rated marine science technicians (MST) to provide weather briefing services for surface and aviation units.

Instruction: Lectures and programmed instruction concerning properties of air masses, structure of frontal systems, and formation of severe weather. Instruction and practical experience in methods of meteorological data acquisition, coding and decoding data, techniques of weather briefing and basic analysis of weather charts.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorological observations, 3 in basic meteorology (12/79).

CG-1304-0010

Marine Environment and Systems Officer, Class C

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 4-6 weeks (146-210 hours).

Exhibit Dates: 4/77-6/84.

Objectives: To prepare officers to undertake the duties and responsibilities in marine environmental protection and port safety law enforcement.

Instruction: Lectures and practical exercises in basic law enforcement, industry/Coast Guard relations, management of pollution removal, supervision of investigative procedures and reports, and public education concerning the Coast Guard's role in marine environmental protection.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in marine pollution control, 1 in port terminal management (12/79).

CG-1304-0011

Marine Environment and Systems Petty Officer (Class C)

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 5 weeks (180-200 hours).

Exhibit Dates: 4/77-1/90.

Objectives: To prepare petty officers to undertake the duties and responsibilities placed upon the Coast Guard in marine environmental protection and port safety law enforcement.

Instruction: Lectures and practical exercises in basic law enforcement, understanding of pollution removal, gathering of evidence for investigative procedures and reports, and public education concerning the Coast Guard's role in marine environmental protection.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in marine pollution control, 1 in port terminal management (12/79).

CG-1304-0012

Marine Environmental Protection

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (77 hours).

Exhibit Dates: 4/78-10/84.

Objectives: To prepare officers and petty officers for response and enforcement duties in marine environmental protection.

Instruction: Lectures and practical experiences in the law, regulations and standards of the Coast Guard's marine environmental program; oil and chemical spills investigations and response are included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in oil and chemical spill control (12/79).

CG-1304-0013

Oceanography Technician Class C

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 4 weeks (136 hours).

Exhibit Dates: 3/83-12/84.

Objectives: To provide marine science technicians with knowledge and skill to conduct oceanographic observations, perform ice observations, and perform weather observations.

Instruction: Lectures and practical exercises in marine science operations including hydrocasts, salinity determination, calculation of dissolved oxygen, use of expendable bathythermograph, and various sediment samplers, arctic and antarctic ice distributions, weather observations and forecasting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic marine science (7/84).

CG-1304-0014

Weather Forecasting and Flight Briefing (WXFBRF) by Correspondence

Course Number: 420-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 10/78-Present.

Objectives: To train Coast Guard personnel in weather briefing skills and in the identification and analysis of meteorological conditions as these relate to marine and flight weather.

Instruction: Course includes training in climatology, atmospheric physics, world weather, atmospheric conditions and the effect of these conditions on the intensity and movement of weather systems. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorology (5/85).

CG-1304-0015

Marine Science Technician First Class (MST1) by Correspondence

Course Number: 134-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 10/79-3/87.

Objectives: To train Coast Guard personnel in weather briefing skills and in the identification and analysis of meteorological conditions as these relate to marine and flight weather.

Instruction: Course includes training in climatology, atmospheric physics, world weather, atmospheric conditions and the effect of these conditions on the intensity and movement of weather systems. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorology (5/85).

CG-1304-0016

Marine Science Technician Second Class (MST2) by Correspondence

Course Number: *Version 1:* 0234-3. *Version 2:* 0234-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: *Version 1:* 12/89-Present. *Version 2:* 5/86-11/89.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform advanced word processing applications as they apply to a Coast Guard standard computer work station; identify and observe appropriate marine safey measures relating to harbor patrols, cargo vessels, and tank vessels; identify environmental hazards and determine appropriate response measures. *Version 2:* Upon completion of the course, the student will be able to perform advanced word processing applications as they apply to a Coast Guard standard computer work station; identify and observe appropriate marine safey measures relating to harbor patrols, cargo vessels, and tank vessels; identify environmental hazards and determine appropriate response measures; solve basic chemistry problems; identify marine safety procedures; determine environmental control measures relating to hazardous chemical releases.

Instruction: *Version 1:* Topics include word processing, marine safety, and marine environmental response. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination. *Version 2:* Topics include basic chemistry, word processing applications, marine safety, and marine environmental response. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in marine safety (6/90); in the lower-division baccalaureate/associate degree category, 3 semester hours in advanced word processing and 1 in environmental management (6/90). *Version 2:* In the vocational certificate category, 1 semester hour in oceanographic instrumentation, 1 in marine safety, and 1 in meteorology (6/90); in the lower-division baccalaureate/associate degree category, 2 semester hours in general science, 1 in advanced word processing, and 1 in environmental management (6/90).

CG-1304-0017

Marine Science Technician Class A

Course Number: MS 729 R.

Location: Reserve Training Center, Yorktown, VA.

Length: 6 weeks (120-145 hours).

Exhibit Dates: 11/88-Present.

Learning Outcomes: Upon completion of this course, the student will be able to utilize software, and, in conjunction with a Coast Guard terminal, to perform common word processing operations, use spread sheets and databases; student will be able to employ computer terminals to transmit and receive messages; understand basic concepts of physical oceanography; operate facsimile and teletype machines, and, to a greater degree, understand the basic concepts of meteorology.

Instruction: Lectures and practice in word processing, general lectures in meteorology and in oceanography.

Credit Recommendation: In the vocational certificate category, 1 semester hour in word processing (6/90); in the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to oceanography, 1 in introduction to meteorology (6/90).

CG-1304-0018

Marine Science Technician First Class
by Correspondence

Course Number: 0134-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 4/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to respond to hazardous chemical releases according to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) guidelines. Establish guidelines for training personnel as Coast Guard standard terminal operators.

Instruction: Correspondence using examples and problems in weather forecasting, hazardous chemical release response situations, marine safety, word processing applications. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in marine safety and 1 in word processing (6/90). In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorolgoy and 1 in environmental management (6/90).

CG-1304-0020

Weather Briefer Analyst Class C
(Weather Briefer Class C)

Course Number: MS 722 R.

Location: Reserve Training Center, Yorktown, VA.

Length: 6 weeks.

Exhibit Dates: *Version 1:* 8/89-Present. *Version 2:* 11/86-7/89.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to procure and utilize applicable meteorological data for preparation of forecasts of sea states, of winds and temperatures at various altitudes, convective outlook and probability of turbulence, fog, icing conditions, air mass thunderstorms, and hail that are of importance to Coast Guard surface and aviation operations. In addition, the student shall have the necessary expertise to utilize properly Skew-T, Log P diagrams to derive condensation levels, Showalter Index, freezing levels and air mass stability; standard facsimile charts, radar plots and satellite visible and infrared imagery to designate areas of convergence and divergence as well as surface and upper level frontal positions and areas of precipitation. The student shall have the additional ability to analyze twelve and twentyfour hour constant pressure charts for continuity onto the current constant pressure chart set, analyze for isotachs, isotherms, height centers, troughs, ridges, and moisture; analyze vorticity charts for maxima and minima, vorcity lobes and advection. In addition, the student shall be able to identify mission specific parameters, integrate available information with sound reasoning, prepare a complete written report, and *Version 2:* Upon completion of the course, the student will be able to procure and utilize applicable meteorological data for preparation of forecasts of sea states, of winds and temperatures at various altitudes, convective outlook and probability of turbulence, fog, icing conditions, air mass thunderstorms, and hail that are of importance to Coast Guard surface and aviation operations. In addition, the student shall have the necessary expertise to utilize properly Skew-T, Log P diagrams to derive condensation levels, Showalter Index, freezing levels and air mass stability; standard facsimile charts, radar plots and satellite visible and infrared imagery to designate areas of convergence and divergence as well as surface and upper level frontal positions and areas of precipitation. conduct a complete military weather briefing.

Instruction: *Version 1:* Lectures and programmed instruction concerning properties of air masses, structure of the atmosphere, frontal systems, formation of various types of severe weather, practical experience in methods of meteorological data acquisition, techniques of weather briefing, analysis of satellite and radar imagery, and analysis of weather charts. In addition, practical experience provides in depth analysis of weather charts, preparation of written reports and conduct of complete weather briefing. *Version 2:* Lectures and programmed instruction concerning properties of air masses, structure of the atmosphere, frontal systems, formation of various types of severe weather, practical experience in methods of meteorological data acquisition, techniques of weather briefing, analysis of satellite and radar imagery, and analysis of weather charts.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorological observation, 3 in basic meteorology, 3 in practical meteorological forecasting (6/90); in the upper-division baccalaureate category, 3 semester hours in public speaking (6/90). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in meteorological observation, 3 in basic meteorology, 3 in practical meteorological forecasting (6/90).

CG-1402-0001

Electronics Technician Chief (ETC)
by Correspondence

Course Number: 021-9.

Location: Coast Guard Institute, Oklahoma City, Ok.

Length: Maximum 78 weeks.

Exhibit Dates: 10/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the principles of operation of each of the following communication systems; PBX, private line telephone, TWX/TELEX, Federal Telecommunications system; list the requirements for handling classified information; define the following terms: data processing, input/output, multiplexing, simplex, duplex, accumulator, register; describe how magnetic tape and hard disk storage devices are constructed; identify all programming concepts including a description of design materials, flowchart definitions and factors influencing programming steps in accordance with digital computer concepts.

Instruction: The major topics covered are communication systems, handling of classified information, computer and computer operator terms data storage, flow charts, computer concepts. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 3 semester hours in introduction to computer operations; and In the lower-division baccalaureate/associate degree category, 1 semester hour in project administration (6/90).

CG-1402-0002

AN/UYK-7 Computer and Data
Auxiliary Console
(UYNK/DEAC) Course
Development
(AN/UYK-7 Computer and OJ-172 Data
Exchange Auxiliary Console
(DEAC))

Course Number: FT-3.

Location: Reserve Training Center, Yorktown, VA.

Length: 8 weeks (297-298 hours).

Exhibit Dates: $ Upon completion of the course, the student, without

Objectives: references and given an illustration of the OJ-172 DEAC, will be able to label each unit with its correct designation without error. When given the AN/UYK-7 computer with a fault inserted, technical manuals, diagnostic program tape, and test equipment, the student will be able to troubleshoot the AN/UYK-7 to the lowest replacable component. The faulty component(s) must be correctly identified without error in accordance with the performance checklist criteria. The student will be able to label each unit with its correct designation without error, record specific information four out of five items correctly, energize the computer in accordance with performance checklist, measure DC-DC converter voltages in accordance with performance checklist, replace a 90 volt switching regulator, and will state in writing the principles pertaining to the theory of operaion of the power supply unit. Student will be able to replace a core memory, perform the memory port test, state in writing the principles pertaining to the theory of operation of the core memory unit, state in writing the principles pertaining to the theory of operation of the IOA/IOC unit; will troublshoot IOA/IOC unit as a team member; will be able to perform supplemental diagnostics; will perform the automated confidence test, and perform wire wrapping and unwrapping without error and be able to perform the NORO test procedure in accordance with the performance check list criteria. The student will be able to state in writing principles to theory of operation of the TTY, paper tape punch and paper tape reader; will be able to perform maintenance panel checkout procedures; to state in writing principles pertaining to the theory of operation of the control logic; duplicate a magnetic tape as a team member in accordance with performance checklist criteria. The student will be able to maintain MYU's, solar cells, lamp and EOT/BOT currents, capstan speed, read/write amplifier outputs, start and stop times, read/write deskew delays in accordance with the performance checklist criteria, measure time delays, and perform POFA tests and measure tape reader power supply voltages in accordance with performance checklist criteria.

Instruction: Course is presented through lectures, exercises and practical exercises, and examination review of the following topics; diagnostics, operating, maintaining, troubleshooting, repairing, performing test electrical, duplicating magnetic tapes, performing maintenance checkout procedures on panels, operating and using specific handtools, and predictive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in computer operations, 2 in computer maintenance, and 1 in computer repair (9/90).

CG-1403-0001

Small Unit Paperwork (SUPWK) by Correspondence

Course Number: 470-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To train persons in the field of small unit paperwork management.

Instruction: Topic include the Coast Guard directives system, publications and reports index, letters, security and ordnance administration, procurement and property accountability and commissary administration. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military specific nature of the course (5/85).

CG-1404-0001

Radioman
(Radioman Class A)

Course Number: None.

Location: *Version 1:* Radioman School, Petaluma, CA. *Version 2:* Radioman School, Petaluma, CA. *Version 3:* Radioman School, Petaluma, CA. *Version 4:* Training Center, Governors Island, NY; Training Center, Groton, CT.

Length: *Version 1:* 19–20 weeks (680–700 hours). *Version 2:* 20 weeks (575 hours). *Version 3:* 21 weeks (705 hours). *Version 4:* 24 weeks (903 hours).

Exhibit Dates: *Version 1:* 9/86–Present. *Version 2:* 4/74–8/86. *Version 3:* 1/72–3/74. *Version 4:* 11/58–12/71.

Objectives: To train enlisted personnel in the procedures necessary to operate Morse, voice, and teletype communication facilities.

Instruction: *Version 1:* Pending evaluation. *Version 2:* Lectures and practical exercises in typing, voice procedures, radio transmitter and receiver operations, Morse code, basic electricity terminology, teletype operations and message traffic handling, security, leadership, and first aid. *Version 3:* Lectures and practical exercises in typing, voice procedures, communications technology, Morse code, electronics, teletype operations, publications, security, leadership and first aid. *Version 4:* Lectures and practical exercises in typing, voice procedures, communications technology, Morse code, electronics, teletype operations, publications, security, leadership, and first aid.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 2 semester hours in basic typewriting, 1 in radio communication practices (8/80); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic typewriting. Credit is to be granted in either the vocational or lower division category (8/80). *Version 3:* In the vocational certificate category, 2 semester hours in typewriting (6/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in typewriting (6/74). *Version 4:* In the vocational certificate category, 2 semester hours in typewriting (6/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in typewriting (6/74).

CG-1404-0002

Radioman Second Class (RM2) by Correspondence

Course Number: 241-8; 241-7; 241-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 1/75–Present.

Objectives: To provide information on security; administration; communications systems, equipment, and procedures; and antennas.

Instruction: The technical portion of this correspondence course provides a brief coverage of the basic operating characteristics of communication receivers and transmitters used in CW, voice, and telephone modes, and of antenna and wave propogation.

Credit Recommendation: Credit is not recommended because of the military-specific content of the course (9/86).

CG-1404-0003

Communications Officer (COMOFF) by Correspondence

Course Number: 401-6, 401-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 10/79–Present.

Objectives: To provide instruction in the administration of communication systems.

Instruction: Course provides instruction in message forms, means of transmission, administration, security, radiotelephone and visual procedures, basic electromagnetic radiation, radio frequency management and a brief overview of communication equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/86).

CG-1405-0001

Aviation Electronics Technician (AT) Communications, Class A

Course Number: None.

Location: Training Center, Groton, CT.

Length: 3 weeks (102 hours).

Exhibit Dates: 4/66–12/68.

Objectives: To train enlisted personnel to receive, copy, and send international Morse code.

Instruction: Lectures and practical exercises in the use of Morse code and telegraph equipment. Course includes learning Morse code alphanumeric symbols, basic message procedures and formats, and development of copy and sending skills at the rate of eight words a minute.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (6/74).

CG-1405-0002

Storekeeper Third Class (SK3) by Correspondence

Course Number: 349-9.

Location: Coast Guard Instiute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 4/82–Present.

Objectives: To provide potential storekeepers with an understanding of selected topics in administration and clerical procedures.

Instruction: Course includes administration, clerical procedures, fiscal matters, transportation and supply. Students are required to complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in recordkeeping and 1 in office procedures (5/85).

CG-1405-0003

Storekeeper First Class (SK1) by Correspondence

Course Number: 149-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/82–11/86.

Objectives: To provide enlisted personnel with an understanding of the Coast Guard's physical distribution system.

Instruction: Training is provided on fiscal procedures, transportation, and supply support. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course.

CG-1405-0004

Storekeeper Second Class (SK2) by Correspondence

Course Number: 249-8; 249-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 4/82–Present.

Objectives: To prepare enlisted personnel for duties as second class storekeepers.

Instruction: Instruction in office administration, fiscal procedures, supply and logistics maintenance.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office procedures (6/87).

CG-1405-0005

Aviation Engineering Administration
(Aircraft Logs and Records)

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 1–2 weeks (51 hours).

Exhibit Dates: 12/80–Present.

Objectives: Provides training in the proper procedures used in correspondence, aeronautical engineering forms and reports, and the procurement and maintenance of technical publications.

Instruction: Topics include an introduction to work as a technical librarian or computerized maintenance program manager.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in technical records maintenance (6/85).

CG-1405-0006

STOREKEEPER, CLASS A

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 10 weeks (320 hours).

Exhibit Dates: 8/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use keyboard, word processing software, file documents and procure transport and manage the supplys.

Instruction: Instruction includes typing, word processing, correspondence, procurement, requisitions, publications, inventory control, transportation, and property management. Methodology includes lecture, discussion, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in supply management, 1 in merchandise procurement, 1 in word processing, and 1 in office procedures (8/87).

CG-1405-0007

RESERVE STOREKEEPER, BASIC

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: *Version 1:* 4 weeks. *Version 2:* 2 weeks (80 hours).

Exhibit Dates: *Version 1:* 10/89–Present. *Version 2:* 7/87–9/89.

Learning Outcomes: Upon completion of the course, the student will be able to type business correspondence, file documents, and procure transport and manage the supply.

Instruction: Instruction includes the typing of business correspondence, office procedures, procurement, transportation, inventory control and property management. Methodology includes lecture, discussion and practical exercises.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in office procedures and 1 in supply management (8/87).

CG-1406-0001

INSTRUCTOR TRAINING, CLASS C

Course Number: None.

Location: Training Center, Groton, CT.

Length: 4 weeks (83 hours).

Exhibit Dates: 3/66–12/68.

Objectives: To prepare qualified enlisted personnel of the Coast Guard for assignment to instructor duties at major training centers, ship training detachments, district training teams, and military missions and other instructional duties.

Instruction: This course includes teaching methodology, teaching aids, lesson plans, and practice teaching.

Credit Recommendation: In the vocational certificate category, 2 semester hours in instructional aids (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in instructional aids (7/74); in the upper-division baccalaureate category, 2 semester hours in instructional aids (7/74).

CG-1406-0002

INSTRUCTOR TRAINING

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (85 hours).

Exhibit Dates: 9/76–1/90.

Objectives: To prepare staff in effective methods of instruction, media, and training aids.

Instruction: Course covers leadership, public speaking, methods of instruction, principles of learning, methods of testing, and other aspects in the teaching-learning process.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in teaching methods (9/78).

CG-1406-0003

JOINT UNIFORM MILITARY PAY SYSTEM (JUMPS) CLASS C

(Personnel Management Information Systems (PMIS) Class C)

Course Number: None.

Location: Training Center, Petaluma, CA.

Length: 6 weeks (211 hours).

Exhibit Dates: 4/80–1/90.

Objectives: To prepare enlisted personnel to work with the Joint Uniform Military Pay System (JUMPS) and the Personnel Management Information System (PMIS).

Instruction: Course includes lectures and practical exercises covering instructions on completing the required paperwork for enlistment and reenlistment personnel reports, survivor benefits, Coast Guard payroll and deductions, and various payroll allowances.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (8/80).

CG-1406-0004

INSTRUCTOR/COURSE DEVELOPER CLASS C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 2–3 weeks (74 Hours).

Exhibit Dates: 9/85–Present.

Objectives: Provides skills and knowledge necessary to analyze, design, review, revise, develop, and perform instruction in accordance with accepted principles of instructional technology.

Instruction: Lectures and laboratory experience in performing job analyses; defining target populations; preparing training analyses; writing instructional objectives and criterion-referenced test items; organizing and preparing lesson plans; selecting, designing, and developing training aids; delivering instruction/instructional packages; performing test item analyses; designing and administrating instructional feedback devices. Consists of lecture, testing and laboratory.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in instructional methods (6/85).

CG-1406-0005

BASIC INSTRUCTOR

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (73 hours).

Exhibit Dates: 6/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to prepare course materials, deliver instruction utilizing multiple methods, evaluate instruction and resolve or manage instructor/student and student/student relationships.

Instruction: Instruction focuses on development of instructors skills in development of course materials, enhancement and management of the learning environment, instruction ethics and individual students skill development on instruction. The course also focuses on design and effective use of print and audio-visual support materials. Methods of instruction include proctored exercise, lecture, discussion and case study.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in educational media and 2 in educational methods (8/87).

CG-1406-0006

COURSE DESIGNER

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (58 hours).

Exhibit Dates: 8/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to prepare a new course or revise an existing course utilizing a systems approach to training.

Instruction: Instruction included focuses on design of instructional plans for training a specific group commencing with analysis of training needs, strategies and methods for development of training materials, implementation of training and evaluation of instruction/training, methodology includes lecture, individual instruction, conference and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in instructional systems development (8/87).

CG-1406-0007

RECRUITER TRAINER

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (90–120 hours).

Exhibit Dates: 9/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to recruit, process, and enlist qualified officers, officer candidates, and enlisted personnel in the United States Coast Guard.

Instruction: Includes lectures, demonstrations, practical exercises, and independent study in general policies and objectives of the Coast Guard recruiting program, effective sales techniques, sales training, product knowledge, and applicant processing.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in human resource management (4/89).

CG-1408-0001

SMALL ARMS INSTRUCTOR

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (105 hours).

Exhibit Dates: 3/79–9/85.

Objectives: To train Coast Guard petty officers in the basic skills and advanced knowledge to act as range officers or coaches and to establish small arms ranges and small arms training programs.

Instruction: Training in safety and marksmanship on a .45 pistol, .38 revolver, M-16 rifle and 12 ga. shotgun. Students will be required to demonstrate proficiency in range safety, and approved methods of instruction in the care and use of small arms.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in small arms range management (4/87).

CG-1408-0002

Engineering Administration Class C

Course Number: MK-1.

Location: Reserve Training Center, Yorktown, VA

Length: 1-2 weeks (62 hours).

Exhibit Dates: 9/82-5/86.

Objectives: To provide enlisted personnel with the knowledge and skills required to manage engineering department operations.

Instruction: Topics include performance evaluation and training programs; preparation of department forms, records, reports and publications; administration of the Coast Guard safety program and the motor vehicle program; and procurement systems for obtaining supplies and procedures for receiving, issuing and accounting for engineering supplies. For the course after 6/86, see CG-1408-0035.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in field experience in management (7/84).

CG-1408-0003

Aviation Maintenance Administration (AVADMN1) by Correspondence

Course Number: 448-2; 448-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 1/78-Present.

Objectives: To train enlisted persons and officers in administrative practice of aviation units.

Instruction: Course presents information describing the organization of the typical air station engineering section, the purpose and use of the aircraft inspection system, standard aircraft record forms and proper entries into the forms (aircraft logs) and reports, use of the technical order system, and identification of major categories or types of aviation material and procedures for requisitioning material. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, credit in aviation maintenance administration and management on the basis of institutional evaluation (10/86).

CG-1408-0004

Yeoman Second Class (YN2) by Correspondence

Course Number: 255-7; 255-8.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 11/81-Present.

Objectives: To provide enlisted personnel with basic paperwork management skills.

Instruction: Topics include the administration of the paperwork management program, requirements for promotion within the Coast Guard, security clearances and other specialized training related to Coast Guard operating procedures. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in office administration (1/87).

CG-1408-0005

Yeoman Third Class (YN3) by Correspondence

Course Number: 355-3; 355-2; 355-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 11/81-Present.

Objectives: To provide enlisted personnel with an understanding of communications procedures and personnel policies.

Instruction: Topics include office communications procedures, service records maintenance, paperwork processing and military pay entitlements and procedures.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/87).

CG-1408-0006

Yeoman First Class (YN1) by Correspondence

Course Number: 155-8.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/82-Present.

Objectives: To provide enlisted personnel with an understanding of the Coast Guard's administration and legal system.

Instruction: Training is provided in forms management, personnel procedures, the security of classified material, military justice, Coast Guard organization and administration and the Coast Guard morale and education programs. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended due to the military-specific nature of the course (5/85).

CG-1408-0007

Weapons Administration (WEPAD) by Correspondence

Course Number: 410-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/81-Present.

Objectives: To teach ordnance personnel the administrative skills to function on board ship.

Instruction: Course covers ordnance records, casualty reports, property management, and ordnance safety. Students must successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85).

CG-1408-0008

Chief Quartermaster (QMC) by Correspondence

Course Number: 037-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78-Present.

Objectives: To train enlisted personnel to perform leadership and administrative duties.

Instruction: Course includes leadership, personnel procedures, communications, organizational structure, and the presentation of training sessions. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to management and 2 in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0009

Electronics Technician Chief (EMC) by Correspondence

Course Number: 021-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 7/78-9/86.

Objectives: To train enlisted personnel to perform leadership and administrative duties.

Instruction: Course includes leadership, personnel procedures, communications, organizational structure, and the presentation of training sessions. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to management and 2 in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0010

Electrician's Mate Chief (EMC) by Correspondence

Course Number: 019-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 5/81-Present.

Objectives: To train enlisted personnel to perform leadership and administrative duties.

Instruction: Course includes leadership, personnel procedures, communications, organizational structure, and the presentation of training sessions. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to management and 2 in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0011

Sonar Technician Chief (STC) by Correspondence

Course Number: 0043-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 5/80-12/86.

Objectives: To train in operations and equipment maintenance on sonar as well as in administration and supervision.

Instruction: Course includes training programs, warfare tactics, and maintenance supervision. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in teaching methods (5/85).

CG-1408-0012

Chief Machinery Technician (MKC) by Correspondence

Course Number: 032-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0013

Investigator Chief (IVC) by Correspondence

Course Number: 0066-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide training so that personnel can serve in an instructional, training, and supervisory capacity.

Instruction: Course includes training programs, supervision, education, effective leadership and basic Coast Guard administration. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in teaching methods (5/85).

CG-1408-0014

Chief Hospital Corpsman (HMC) by Correspondence

Course Number: 031-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0015

Chief Aviation Electrician (AEC) by Correspondence

Course Number: 001-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0016

Chief Boatswain's Mate (BMC) by Correspondence

Course Number: 009-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0017

Chief Damage Controlman (DCC) by Correspondence

Course Number: 015-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–3/87.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0018

Chief Dental Technician (DTC) by Correspondence

Course Number: 018-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0019

Chief Storekeeper (SKC) by Correspondence

Course Number: 049-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

CG-1408-0022

Chief Firefighter (FIC) by Correspondence

Course Number: 025-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0023

Chief Marine Science Technician (MSTC) by Correspondence

Course Number: 034-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0024

Chief Yeoman (YNC) by Correspondence

Course Number: 055-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0025

Chief Radarman (RDC) by Correspondence

Course Number: 039-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0026

Chief Radioman (RMC) by Correspondence

Course Number: 041-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0027

Chief Aviation Survivalman (ASMC) by Correspondence

Course Number: 008-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0028

Chief Telephone Technician (TTC) by Correspondence

Course Number: 045-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0029

Chief Aviation Electronics Technician (ATC) by Correspondence

Course Number: 003-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0030

Chief Aviation Structural Mechanic (AMC) by Correspondence

Course Number: 007-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0031

Chief Gunner's Mate (GMC) by Correspondence

Course Number: 029-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–8/86.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0032

CHIEF FIRE CONTROL TECHNICIAN (FTC) BY CORRESPONDENCE

Course Number: 027-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–11/85.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0033

CHIEF SUBSISTENCE SPECIALIST (SSC) BY CORRESPONDENCE

Course Number: 051-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0034

CHIEF AVIATION MACHINIST (AMC) BY CORRESPONDENCE

Course Number: 005-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/78–Present.

Objectives: To provide senior enlisted personnel with the knowledge to function in an instructional and a supervisory capacity.

Instruction: Training is provided in effective leadership, training and education, and basic Coast Guard administration.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in organizational behavior (5/85); in the upper-division baccalaureate category, 1 semester hour in methods of instruction (5/85).

CG-1408-0035

ENGINEERING ADMINISTRATION

Course Number: MK-1(R).

Location: Reserve Training Center, Yorktown, VA.

Length: 1–2 weeks (58–62 hours).

Exhibit Dates: 6/86–Present.

Learning Outcomes: Upon completion of the coure, the student will be able to manage engineering department operations at group and shore stations as well as Coast Guard cutters and boats.

Instruction: Topics include performance evaluation and training programs; preparation of department forms, records, reports and publications; administration of Coast Guard safety program and motor vehicle program; and procurement systems for obtaining supplies and procedures for receiving, issuing, and accounting for engineering supplies.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in field experience in management, 3 when this course is combined with an assignment as a senior engineer (Engineering Petty Officer - EPO) (10/88).

CG-1408-0036

RADARMAN FIRST CLASS (RD1) BY CORRESPONDENCE

Course Number: 139-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 11/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify procedures used to plan, organize, schedule, and supervise training programs; identify procedures used to prepare reports, communication plans and to implement operational plans; identify procedures to implement preventive maintenance plans, to coordinate anti-aircraft operations; identify procedures for the reporting of equipment status.

Instruction: The major topics covered are administration and supply, operational and personnel procedures, operations, navigational plotting procedures, safety and training, electronic warfare and communications. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in project administration (6/90).

CG-1408-0037

DAMAGE CONTROLMAN CHIEF (DCC) BY CORRESPONDENCE

Course Number: 0015-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 4/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform carpentry maintenance inspections, select design requirements and material for all types of piping and plumbing systems, train and supervise personnel in all aspects of CBR (chemical, biological, radiological) defense, administer a shop on a ship or base, and inspect shipyard work.

Instruction: Topics include carpentry, plumbing, CBR warfare defense, and administration. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in project administration (6/90).

CG-1408-0038

FIRE CONTROL TECHNICIAN CHIEF (FTC) BY CORRESPONDENCE

Course Number: 027-9.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 12/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to explain the charactistics and operating capabilities of Coast Guard weapons systems; plan and conduct pre-fire and post-fire briefings; identify and satisfy ordnance reporting requirements; identify operating guides and appropriate accounting classification codes.

Instruction: The major topics covered are characteristics of Coast Guard weapons systems, ordnance reporting requirements and the Coast Guard ordnance accounting system. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in project administration (6/90).

CG-1408-0039

SONAR TECHNICIAN CHIEF (STC) BY CORRESPONDENCE

Course Number: 043-9.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 1/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify the proper installation of new or overhauled assemblies, subassemblies or components of electronic equipment in accordance with Coast Guard standards, select the correct interface cables for assemblies, verify the performance of assemblies, use WQM-series sonar test set to test transducers, describe the procedures used to analyze operational and maintenance logs and requisition replacement parts and tools.

Instruction: The major topics covered are test equipment, test procedures and preventive maintenance equipment installation. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in project administration (6/90).

CG-1408-0040

GUNNER'S MATE CHIEF (GMC) BY CORRESPONDENCE

Course Number: 029-9.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 9/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to develope safety programms and safety inspection procedures; select the applicable destruction method for classified documents; develop and implement training programs; develope the procedures required to maintain a system of personal property accoutability; establish a preventative maintenance system.

Instruction: The major topics covered are safety programs, safety inspection, documentation for classified data, and preventative maintenance. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in project administration (6/90).

CG-1408-0041

SMALL ARMS INSTRUCTOR

Course Number: SAI.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (111-112 hours).

Exhibit Dates: 10/85-Present.

Learning Outcomes: Upon completion of the course, the student will be able to present lectures and demonstrations relating to weapon and range safety, operator maintenance on .45 caliber pistol, 9mm service pistol; qualify on the .45 service pistol, M16 service rifle, 12 gauge riot service shotgun; fire the 9mm pistol for familiarization; manage weapons range and perform duties of the line instructor.

Instruction: Lecrures, practical exercise, and videos covering the following topics: prepare lesson plan, first aid emergencies, line instruction, range preparation and management, operator weapon maintenance, and weapon qualification.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in small range management (9/90).

CG-1409-0001

YEOMAN SCHOOL, CLASS A

Course Number: None.

Location: Training Center, Petaluma,CA; Training Center, Groton, CT.

Length: *Version 1:* 10 weeks (349 hours). *Version 2:* 12-14 weeks (360-480 hours). *Version 3:* 12 weeks (436 hours).

Exhibit Dates: *Version 1:* 9/79-3/86. *Version 2:* 1/76-8/79. *Version 3:* 6/66-12/75.

Objectives: To provide yeomen with training in office and clerical procedures, including operation and preventive maintenance of typewriters.

Instruction: *All Versions:* Lectures and practical exercises in typing, filing, correspondence, personnel records, office procedures and etiquette. *Version 1:* Time spent in filing procedures has been significantly increased.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in filing, 3 in typing, 3 in office practices (8/80). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in typing, 3 in office practices (8/80); in the upper-division baccalaureate category, credit in typing based on institutional evaluation (8/80). *Version 3:* In the lower-division baccalaureate/associate degree category, 3 semester hours in typing, 3 in office practices (3/74); in the upper-division baccalaureate category, credit in typing on the basis of institutional evaluation (12/68).

CG-1409-0002

STOREKEEPER, CLASS A

Course Number: None.

Location: Training Center, Petaluma, CA; Training Center, Groton, CT.

Length: *Version 1:* 10 weeks (351 hours). *Version 2:* 10 weeks (350 hours). *Version 3:* 12 weeks (436-464 hours).

Exhibit Dates: *Version 1:* 6/80-7/86. *Version 2:* 7/74-5/80. *Version 3:* 6/66-6/74.

Objectives: To train enlisted personnel to be storekeepers.

Instruction: *All Versions:* Lectures and practical exercises in procurement, typing, use of office machines, correspondence, inventory control, requisitions, publications, disbursing, transportation, property, travel, and pay and allowances. *Version 1:* Lectures and exercises in procurement, transportation, inventory control, property management, travel, pay and allowances, typing correspondence, requesitions, office machines and publications. *Version 2:* Includes disbursements.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic typing, 1 in merchandise procurement (8/80). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in typing (8/80) *Version 3:* In the lower-division baccalaureate/associate degree category, 1 semester hour in typing (6/74). (12/68).

CG-1409-0003

YEOMAN SCHOOL, CLASS A

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 12 weeks (412 hours).

Exhibit Dates: 4/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to utilize keyboard, word processing and software to effectively correspond and communicate with internal and external agencies, maintain records and files associated with personnel and office reports.

Instruction: Instruction includes basic keyboard and word processing followed by external application of word processing to real experiences within an office. Record-maintenance, office communication, personnel issues and legal procedures are also covered. Methodology includes lecture, proctoral exercises, demonstration and case study.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in word processing and 3 in office procedures (8/87).

CG-1409-0004

RESERVE YEOMAN BASIC

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 5/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to effectively utilize publications, maintain office records, maintain personnel records and internal and external correspondence for the unit.

Instruction: Instruction includes office communication procedures, forms and procedural publications, record maintenance and legal procedures for correspondence and records. Methods of instruction include lecture, proctored exercise and discussion.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in office procedures (8/87).

CG-1511-0001

CHIEF PETTY OFFICER ACADEMY

Course Number: None.

Location: Reserve Training Center, Yorktown, VA

Length: 10 weeks (371 hours).

Exhibit Dates: 6/83-6/84.

Objectives: To provide senior enlisted personnel with the knowledge and skills in leadership, management, and interpersonal communications.

Instruction: Topics include leadership, management, interpersonal communications, resource management, human relations, career counseling and organizational effectiveness. World studies are covered including various ideologies, national purpose, national interest, foreign policy, domestic factors, international politics and the balance of power.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in human relations/management; in the upper-division baccalaureate category, 3 semester hours in international relations (7/84).

CG-1511-0002

CHIEF PETTY OFFICER ACADEMY

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 8 weeks (345 hours).

Exhibit Dates: 6/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to fulfill management, leadership, and human resources development responsibilities in current or future positions.

Instruction: Instruction includes management principles, leadership behavior and contemporary leadership issues, personal and physical development, written and oral communication, interpersonal relationships and teambuilding and human resources development. Instructional methods include lectures, discussion, role playing, case studies, and problem solving.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in physical education/health, 3 in business communication, and 3 in organization and management (8/87).

CG-1512-0001

MILITARY CIVIL RIGHTS (MCR) BY CORRESPONDENCE

Course Number: 0800-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 hours maximum.

Exhibit Dates: 8/82-Present.

Objectives: To present an overview of military civil rights and affirmative action.

Instruction: Provides instruction in the military civil rights program and its organization within the Coast Guard. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/85).

CG-1601-0001

CLASS C FIELD OIL IDENTIFICATION LABORATORY

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (75 hours).
Exhibit Dates: 4/78-1/90.

Objectives: To train Coast Guard petty officers to be field oil identification laboratory technicians.

Instruction: Theory and extensive laboratory practice on fluorescence spectroscopy and thin layer chromatography. Theory of basic petroleum chemistry laboratory procedures for constituent identification of oil samples.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in fluorescence spectroscopy, thin film chromatography, and laboratory practices (12/79).

CG-1701-0001

Refrigeration and Air Conditioning (Operation and Maintenance)

Course Number: MK-22.
Location: Reserve Training Center, Yorktown, VA.
Length: 5-6 weeks (175-210 hours).
Exhibit Dates: 6/77-11/87.

Objectives: To train engineering petty officers in the operation and maintenance of refrigeration, air conditioning and heat pump equipment used on Coast Guard cutters, boats and stations.

Instruction: Lectures and practical exercises on gas laws, the properties of heat, pressure-temperature relationship, the refrigeration cycle, refrigerants, safety leak detectors and temperatures as they pertain to refrigeration, air conditioning and heat pumps.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in air conditioning and refrigeration (12/79).

CG-1701-0002

Refrigeration/Air Conditioning Operation and Maintenance Class C

Course Number: MK-22.
Location: Reserve Training Center, Yorktown, VA.
Length: 6 weeks (219-223 hours).
Exhibit Dates: 12/87-Present.

Learning Outcomes: Upon completion of the course, the student will understand the principles of operating, testing, and maintaining refrigeration and air conditioning equipment. Instruction includes the knowledge of the refrigeration cycle, the use of service equipment, evacuating and charging procedures, testing electrical circuits and troubleshooting heating, ventilating, and air conditioning systems.

Instruction: Lectures and practical exercises on gas laws, the properties of heat, pressure-temperature relationship, the refrigeration cycle, refrigerants, safety leak detectors, and temperatures as they pertain to refrigeration, air conditioning, and heat pumps.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in refrigeration, 1 in refrigeration laboratory, and 1 in air conditioning laboratory (10/88).

CG-1702-0001

Aviation Survivalman Class A

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 14 weeks (421 hours).
Exhibit Dates: 3/85-Present.

Objectives: To provide knowledge and skills necessary to perform the configuration, application, operation, inspection, and repair of aircraft and aircrew safety and survival equipment.

Instruction: Lectures and hands-on experience in the preparation, inspection, operation, modification, repair, and maintenance of personnel emergency parachutes, cargo aerial delivery systems, survival equipment, helicopter flotation bags, and auxiliary flotation systems, survival equipment for air/sea rescue kits, and special protective clothing.

Credit Recommendation: In the vocational certificate category, 1 semester hour in sewing machine servicing, 3 towards a certificate in fabric/upholstery repair and fabrication (6/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in rescue and survival procedures and equipment (6/85).

CG-1704-0001

Aviation Machinist's Mate Class A
(Aviation Machinist's Mate)

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC; Aircraft Repair and Supply Center, Elizabeth City, NC.
Length: *Version 1:* 8-9 weeks (198 hours). *Version 2:* 18 weeks (636-787 hours). *Version 3:* 21 weeks (567 hours). *Version 4:* 24 weeks (630 hours).
Exhibit Dates: *Version 1:* 4/85-Present. *Version 2:* 6/76-3/85. *Version 3:* 7/72-5/76. *Version 4:* 2/65-6/72.

Objectives: To provide fundamental principles of mathematics, physics, and aerodynamics for further study on specific aircraft systems and to provide training at entry-level in aircraft maintenance on several specific aircraft.

Instruction: *Version 1:* Trains students to service and maintain ground support equipment, select and use maintenance forms and publications, select and use hand tools and aircraft hardware, taxi aircraft, perform basic lubrication operations, and perform the basic skills of a search and rescue (SAR) aircrewman. NOTE: After completing the basic phase students normally progress to either the Fixed Wing track (CG-1704-0022) or Rotary Wing track (CG-1704-0023). *Version 2:* Lectures and practical exercises in physics, mechanics, theory of flight, power plants, instruments, electrical systems, and propeller inspection and maintenance. *Version 3:* Lectures and practical exercises in physics, mechanics, theory of flight, power plants, instruments, electrical systems, and propeller inspection and maintenance. *Version 4:* Lectures and practical exercises in physics, mechanics, theory of flight, power plants, instruments, electrical systems, and propeller inspection and maintenance.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to aviation maintenance, 1 in ground operation and servicing procedures, 1 in aircraft technical publications, 1 in basic shop practices, 2 in materials and processes (6/85). *Version 2:* In the vocational certificate category, 1 semester hour in basic shop practice, 4 in basic aircraft maintenance (9/77). *Version 3:* In the vocational certificate category, 2 semester hours in flight theory, 2 in instruments and electrical/hydraulic systems, 2 in propeller and helicopter familiarization, 1 in inspection and maintenance procedures, 1 in helicopter power plants, and 5 in power plant theory, inspection, and maintenance (2/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in flight theory, 1 in propeller and helicopter familiarization, 1 in helicopter power plants, 2 in power plant theory, inspection, and maintenance, and, on the basis of institutional examination, credit in instruments and electrical/hydraulic systems (2/74); in the upper-division baccalaureate category, 2 semester hours in flight theory (2/74). *Version 4:* In the vocational certificate category, 2 semester hours in flight theory, 2 in instruments and electrical/hydraulic systems, 2 in propeller and helicopter familiarization, 1 in inspection and maintenance procedures, and 5 in power plant theory, inspection, and maintenance (2/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in flight theory, 1 in propeller and helicopter familiarization, 2 in power plant theory, inspection, and maintenance, and, on the basis of institutional evaluation, credit in instruments and electrical/hydraulic systems (2/74); in the upper-division baccalaureate category, 2 semester hours in flight theory (2/74).

CG-1704-0002

43D50 Propeller Maintenance Class C

Course Number: None.
Location: Aircraft Repair and Supply Center, Elizabeth City, NC.
Length: 2 weeks (60 hours).
Exhibit Dates: 2/76-1/90.

Objectives: To develop skills in the maintenance and repair of a Hamilton Standard propeller.

Instruction: Instruction in disassembling, cleaning, inspecting, repairing, assembling, and testing Hamilton Standard propellers.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aviation maintenance (9/77).

CG-1704-0003

HU-16E Aircraft Maintenance Class C

Course Number: None.
Location: Aircraft Repair and Supply Center, Elizabeth City, NC.
Length: 5 weeks (215 hours).
Exhibit Dates: 5/76-1/90.

Objectives: To provide advanced technical training in the troubleshooting, repair, and maintenance of the HU-16E aircraft.

Instruction: Provides general instruction on the HU-16E aircraft and in the various major subsystems, including engine, fuel, aircraft electrical, fire control, and oxygen subsystems.

Credit Recommendation: In the vocational certificate category, 4 semester hours in aviation maintenance (9/77); in the lower-division baccalaureate/associate degree category, 4 semester hours in aviation maintenance technology (9/77).

CG-1704-0004

T58-GE-8B Engine Maintenance Class C

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC; Aircraft Repair and Supply Center, Elizabeth City, NC.
Length: *Version 1:* 4 weeks (147 hours). *Version 2:* 3-4 weeks (125-128 hours).
Exhibit Dates: *Version 1:* 3/82-Present. *Version 2:* 2/76-2/82.

Objectives: To train students in the maintenance and adjustment of T58-GE-8B Turk shaft engines.

Instruction: *Version 1:* Topics include engine and systems operation, maintenance publications, corrosion control, servicing, maintaining, inspecting, and repairing the T58-8 engine. *Version 2:* Students remove engines; disassemble, inspect, assemble, and install power plants in airframes; run engines; and make adjustments. Corrosion control and preservation techniques are included.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft gas turbine engine inspection, 1 in aircraft gas turbine engine maintenance (6/85). *Version 2:* In the vocational certificate category, 2 semester hours in aviation mechanics (9/77); in the lower-division baccalaureate/associate degree category, 2 semester hours toward an aviation technology degree (9/77).

CG-1704-0005

HH-52A AIRFRAME AND POWERTRAIN MAINTENANCE CLASS C
(HH-52A Airframe and Powertrain, Class C)

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC; Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 5 weeks (182-215 hours).

Exhibit Dates: *Version 1:* 9/84-Present. *Version 2:* 2/76-8/84.

Objectives: To train students to maintain and adjust HH-52A airframe and powertrain systems.

Instruction: Maintenance instruction is in the area of gear boxes, drive shafts, main and tail rotor loads, and fuel, hydraulics, and oil systems. Students also learn how to replace and adjust components.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in assembly and rigging, 3 in airframe systems (6/85). *Version 2:* In the vocational certificate category, 4 semester hours toward aviation airframe mechanics (9/77); in the lower-division baccalaureate/associate degree category, 4 semester hours toward an aviation technology degree (9/77).

CG-1704-0006

HC-131A AIRCRAFT MAINTENANCE CLASS C

Course Number: None.

Location: Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 6 weeks (210 hours).

Exhibit Dates: 5/76-1/90.

Objectives: Provides training in the repair, troubleshooting, and general maintenance of HC-131A aircraft.

Instruction: Introduction to HC-131A aircraft and ground handling equipment; instruction in the operation and maintenance of major engine subsystems, including fuel instrumentation and propellers, and in other aircraft subsystems, including electrical, safety, hydraulic, landing gear, air conditioning, pressurization, fire detection, and automatic pilot.

Credit Recommendation: In the vocational certificate category, 4 semester hours in aircraft maintenance (9/77).

CG-1704-0007

AVIATION MACHINIST'S MATE, SECOND CLASS, BY CORRESPONDENCE

Course Number: 205-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/77-8/86.

Objectives: To provide the second class machinist's mate with those basic aircraft subjects needed for the mission.

Instruction: This correspondence course outlines aviation safety precautions, states the purpose and scope of the Coast Guard aircraft maintenance management system lists the kinds of aviation directives and publications, explains technical orders (T.O.), and identifies and explains the purpose of the Coast Guard aviation forms and reports. Aircraft hardware selection and identification is presented along with various safety methods. Basic corrosion control and preventive measures, are discussed. Jet propulsion engines, turbojet engines, and their systems are presented. A proctored end-of-course examination is required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in power plant maintenance (1/79).

CG-1704-0008

AVIATION MACHINIST'S MATE, FIRST CLASS, BY CORRESPONDENCE
(Aviation Machinist Mate, First Class, by Correspondence)

Course Number: 105-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 7/77-Present.

Objectives: To provide the student with aircraft maintenance management training including records and forms and to present general propeller principles.

Instruction: This correspondence course presents the subsections of an air station engineering section while describing the duties of each subsection. The technical order (T.O.) system and related records and maintenance publications are discussed. The operating principles of the 43D50 and 54H60 propellers are covered including their components and electrical systems. The course includes a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in propeller maintenance (1/79).

CG-1704-0009

HC-130 FLIGHT ENGINEER BY CORRESPONDENCE

Course Number: 445-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 4/77-10/86.

Objectives: To provide standardized special training and introductory information to prospective flight engineer candidates.

Instruction: This correspondence course includes descriptions of the mechanical, communications, and navigational systems of the HC-130 aircraft. It also includes descriptions of preflight, inflight and postflight duties of the flight engineer on the HC-130 aircraft. The course includes ground handling, servicing, and safety precautions. Course includes proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/79).

CG-1704-0010

FLIGHT MECHANIC HH-52A BY CORRESPONDENCE

Course Number: 441-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 1/77-4/87.

Objectives: To provide standardized specialty training on the HH-52A helicopter

Instruction: This correspondence course contains helicopter aerodynamics and control definitions. Also included are the mechanical, communications, and navigational systems along with preflight, inflight, and postflight duties.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (1/79).

CG-1704-0011

HH-3F FLIGHT MECHANIC BY CORRESPONDENCE

Course Number: 443-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 3/84-4/87. *Version 2:* 4/76-2/84.

Objectives: To introduce the HH-3F helicopter to flight mechanic candidates.

Instruction: *Version 1:* Flight mechanics are introduced to the HH-3F aircraft, aircraft systems, powertrain, aircraft equipment and furnishings, rescue equipment and recovery procedures, flight mechanic duties, helicopter aerodynamics, and theory of flight.Students must take proctored final exam. *Version 2:* This correspondence course includes basic helicopter theory of flight characteristics, aircraft and powertrain systems, equipment and furnishings, and rescue equipment and procedures.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in aircraft systems, powertrain, aircraft equipment, and helicopter aerodynamics (5/85). *Version 2:* Credit is not recommended because of the military-specific nature of the course (1/79).

CG-1704-0012

C-131A PROPELLER MAINTENANCE, CLASS C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 3 weeks (89-101 hours).

Exhibit Dates: 3/78-1/90.

Objectives: To provide technological training necessary to perform preventive maintenance and repair on the Hamilton Standard 43E60-533 propeller.

Instruction: Lectures and practical exercises covering introduction to the propeller, introduction to prop removal, disassembly, reassembly, test and installation, troubleshooting, adjustments, line maintenance, and run-up.

Credit Recommendation: In the vocational certificate category, 2 semester hours in aircraft propellers (8/78); in the lower-division baccalaureate/associate degree category, 1 semester hour in aircraft propellers (8/78).

CG-1704-0013

Aviation Structural Mechanic, Second Class, by Correspondence

Course Number: 207-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/77-Present.

Objectives: To provide an understanding of aviation maintenance administration, with specific information on hardware and advanced corrosion control.

Instruction: This correspondence course prepares student to perform general aviation safety in ground equipment, fuel and oxygen systems; student will be able to describe the Coast Guard a/c maintenance management system; student will use and explain records, directions, publications, and the T.O. system and use technical manuals and directives. Proper use and identification of aircraft hardware is presented; the theory of basic and advanced corrosion control is covered including painting for corrosion protection. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic aircraft maintenance (1/79)

CG-1704-0014

Industrial Hydraulics by Correspondence

Course Number: 413-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 5/79-Present.

Objectives: To provide a general overview of the operations and maintenance of industrial hydraulic systems.

Instruction: Course stresses indepth instruction about the elements of a total hydraulic system using the Sperry Vickers approach to hydraulic mechanisms. The student is introduced to hydraulics and the principles of hydraulics power. Each element of a typical hydraulic systems is studied, starting with hydraulic fluids, piping and sealing, reservoirs and fluid conditions, actuators, directional control units, servo valves, pressure controls, volume controls, pumps, instruments, and accessories. The proper definition of technical terms and principles is stressed as well as their standard geographical symbolic representation. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic industrial hydraulics (5/79).

CG-1704-0015

Aviation Structural Mechanic, First Class, by Correspondence

Course Number: 107-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 7/77-12/85.

Objectives: To introduce the student to aviation maintenance administration and sheet metal layout and forming.

Instruction: This correspondence course explains the Coast Guard aircraft maintenance management systems, standard aircraft maintenance procedures, records, and required inspections. A description of the technical order system and procedures for requisitioning aviation material are included. The proper layout procedures used to fabricate and assemble aircraft sheet metal structural components are discussed; also included is a review of mathematics and blueprint reading. Emphasis is on Coast Guard procedures and application. There is no practical laboratory.

Credit Recommendation: Credit is not recommended due to the limited nature of the course (1/79).

CG-1704-0016

Aviation Corrosion Control by Correspondence

Course Number: 439-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 1/78-1/90.

Objectives: To familiarize the student with aircraft corrosion and control.

Instruction: This correspondence course contains the theory of corrosion, the different forms of corrosion, preventive measures and the preservation of the aircraft surfaces. Course has a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended due to the limited scope of the course (1/79).

CG-1704-0017

HC-130 Dropmaster (AC-130D-1) by Correspondence

Course Number: 446-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/76-11/86.

Objectives: To provide standardized specialty training on the HC-130 aircraft and to teach proper procedures and safety precautions for rescue equipment airdrop.

Instruction: The student will become familiar with the HC-130 aircraft including general arrangement, dimensions, emergency exits, powertrains, engine, and communication systems; student will understand groundhandling and servicing procedures and safety precautions, and be familiar with procedures for cargo restraint, procedures for rescue equipment airdrop, and the safety precautions involved.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (5/79).

CG-1704-0018

Aviation Survivalman, Second Class, by Correspondence

Course Number: 208-5; 208-4; 208-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 11/71-Present.

Objectives: To provide the student with the fundamentals of survival equipment.

Instruction: This correspondent course contains a review of physics and electricity and describes jato, pyrotechnics and parachute lofts. Identification of basic survival equipment, protective clothing, small arms and ammunition, the function of the oxygen system and use of related hand tools are covered as well as the inspection and repair of parachutes.

Credit Recommendation: Credit is not recommended due to the military-specific nature of the training involved (3/87).

CG-1704-0019

Aviation Survivalman, First Class, by Correspondence

Course Number: 108-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/77-1/90.

Objectives: To provide the student with the basic knowledge in aviation administration, ordnance, and fabric repair.

Instruction: This correspondence course describes the Coast Guard aircraft maintenance management system, and maintenance inspections and cites the maintenance-level structure and the prime unit concept. It further includes records, technical order systems, supply system, and the establishment of an ordnance library. In addition, it presents parachute lofts and parachute maintenance. It also covers pyrotechnics and jato systems.

Credit Recommendation: Credit is not recommended due to the military-specific application of the training involved (1/79).

CG-1704-0020

Hydraulic Systems and Equipment Operation and Maintenance

Course Number: MK-6.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (68-70 hours).

Exhibit Dates: 5/78-4/85.

Objectives: To train qualified enlisted personnel (machinery technicians) to operate and maintain hydraulic components and systems.

Instruction: Lectures and practical exercises in fundamentals of hydraulics and associated subjects including operations and repair of hydraulics systems and components, hydraulic circuit construction and operation, troubleshooting and adjustment techniques and maintenance procedures.

Credit Recommendation: In the vocational certificate category, 2 semester hours in hydraulics and pneumatics (12/79); in the lower-division baccalaureate/associate degree category, 1 semester hour in hydraulics and pneumatics laboratory (12/79).

CG-1704-0021

T58-GE-8B and T58-GE-5 Turboshaft Engine Familiarization (T58FAM) by Correspondence

Course Number: 0551-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 12/82-Present.

Objectives: To provide the aviation machinist mate with basic information on construction and operation of the T58-GE-8B and T58-GE-5 turboshaft engines.

Instruction: Instruction in engine components, operation of engine and components, and basic operational troubleshooting. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in powerplant theory of operation and troubleshooting procedures (5/85).

CG-1704-0022

Aviation Machinist's Mate (AD) Fixed Wing Class A

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 4-5 weeks (136 hours).
Exhibit Dates: 4/85-Present.
Objectives: To provide training necessary to perform the maintenance, configuration, and inspection of fixed wing aircraft.
Instruction: Topics include airframe systems, airframe electrical systems, hydraulic systems, landing gear, wheels, brakes, and tires, air, environmental, and oxygen systems, fuel systems, fuselage components, and flight controls. NOTE: A prerequisite for this course is the Aviation Machinist's Mate (AD) Class A Basic course (see exhibit CG-1704-0001).
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in airframe systems, 1 in aircraft turbine engine theory and maintenance (6/85).

CG-1704-0023

Aviation Machinist's Mate (AD) Rotary Wing Class A

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 6-7 weeks (226 hours).
Exhibit Dates: 4/85-Present.
Objectives: Provides the knowledge and skill necessary to perform the maintenance, configuration, operation, and inspection of rotary wing aircraft.
Instruction: Topics include airframe systems, aircraft turbine engine theory and maintenance, ground handling procedures, engine gearbox, main and tail rotor blades, landing gear, technical manuals and publications. NOTE: A prerequisite for this course is the Aviation Machinist's Mate (AD) Class A Basic course (see exhibit CG-1704-0001).
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in airframe systems, 1 in aircraft turbine engine theory and maintenance (6/85).

CG-1704-0024

Aviation Electrician's Mate (AE) Class A Fixed Wing Track Training

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 5-6 weeks (195 hours).
Exhibit Dates: 12/82-Present.
Objectives: Provides knowledge and skill to perform the configuration, application, operation, inspection, and repair of fixed wing aircraft electrical systems.
Instruction: Provides hands-on experience in the preparation, inspection, operation, modification, repair, and maintenance of selected electrical systems and electrical control aspects of other systems on the HC-130 and HU-25A aircraft.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in airframe systems (6/85).

CG-1704-0025

Aviation Electrician's Mate (AE) Class A Rotary Wing Training

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 4-5 weeks (157 hours).
Exhibit Dates: 12/82-Present.
Objectives: Provides the knowledge and skill necessary to perform the configuration, application, operation, inspection, and repair of rotary wing aircraft electrical systems.
Instruction: Instruction and hands-on experience in the preparation, inspection, operation, modification, repair, and maintenance of selected electrical systems on the HH3F and the HH52A aircraft.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in airframe systems (6/85).

CG-1704-0026

T58-5 and T62 Engine Maintenance Class C

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 4-5 weeks (161 hours).
Exhibit Dates: 3/82-Present.
Objectives: To provide training in servicing, maintaining, inspecting, and repairing the T58-5 engine in accordance with the computerized maintenance system.
Instruction: Lectures on engine and systems operation; practical exercises in engine removal from aircraft, disassembly, inspection, repair, reassembly, and reinstallation along with required rigging, T58-5 engine run, and adjustments.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft gas turbine engine inspection and 3 in aircraft gas turbine engine maintenance (6/85).

CG-1704-0027

Aviation Structural Mechanic (AM) Class A

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 18-19 weeks (581 hours).
Exhibit Dates: 6/84-Present.
Objectives: To provide the knowledge and skills necessary to perform the configuration, application, operation, inspection, and repair of aircraft structures and aircraft components.
Instruction: Provides hands-on experience to handle, service, inspect, and maintain aircraft fuselages, wings, and control surfaces; fabricate and assemble metal parts and make repairs to aircraft skins; spray paint and maintain paint equipment; perform nondestructive testing inspections using visual dye and fluorescent penetrant methods; maintain hydraulic systems, landing gear, wheels, and tires; repair integral fuel tanks; perform oxyacetylene welding, bronze, and silver solder metal; perform cable swaging operations; identify and remove corrosion from aircraft and components; make repairs to thermosetting plastics.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 7 semester hours in aircraft structural repair, 2 in principles of hydraulics, 1 in aircraft cleaning and corrosion control, 1 in aircraft ground handling and servicing (6/85).

CG-1704-0028

HU-25A Electrical Class C

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 5-6 weeks (189 hours).
Exhibit Dates: 10/84-Present.
Objectives: To provide the knowledge and skill necessary to inspect, maintain, troubleshoot, and repair the HU-25A aircraft.
Instruction: Lectures and hands-on experience in the operation, troubleshooting, inspection, and routine maintenance of the HU-25A electrical power generation, distribution, indicating and control systems, autopilot, speed control, air data, heading, flight guidance, operation and interface for the cockpit management, inertial sensor, and area navigation systems.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in airframe/electrical familiarization (6/85).

CG-1704-0029

Aviation HU-25A Airframe Class C

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 3-4 weeks (115 hours).
Exhibit Dates: 9/83-Present.
Objectives: To provide the skills and knowledge necessary to perform configuration, application, operation, inspection, and repair tasks on the HU-25A airframe.
Instruction: Lectures and hands-on experience in operation, troubleshooting, inspection, and routine maintenance of the HU25A airframe, various systems, and engines.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in airframe familiarization (6/85).

CG-1704-0030

HH-52A Automatic Stabilization Equipment (ASE) and Selected Electrical Maintenance

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 2 weeks (72 hours).
Exhibit Dates: 1/82-Present.
Objectives: To provide training in servicing, inspecting, maintaining, and repairing the automatic stabilization equipment system, 1080-Y attitude reference system, and associated aircraft systems.
Instruction: Provides training in the operation of individual systems, sub-systems, and modules; practical application in testing, the use of specified test equipment, calibration, necessary adjustments, and troubleshooting.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in aircraft electrical systems and automatic stabilization equipment system troubleshooting (6/85).

CG-1704-0031

HU-25A Avionics Class C

Course Number: None.
Location: Aviation Technical Training Center, Elizabeth City, NC.
Length: 3-4 weeks (136 hours).
Exhibit Dates: 4/85-Present.
Objectives: Provides knowledge and skills necessary to inspect, maintain, troubleshoot, and repair the HU-25A aircraft.
Instruction: Lectures and hands-on experience in the operation, troublehooting, inspection, and routine maintenance of the following HU-25A avionics systems: cockpit management system, audio control, radio altimeter, direction finder, LF-ADF

receiver, VHF-AM transceiver, UHF transmitter/ receiver, inertial sensor system, radar, area navigation system, and LORAN.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in avionic systems maintenance (6/85).

CG-1704-0032

HYDRAULIC SYSTEMS AND EQUIPMENT OPERATION AND MAINTENANCE

Course Number: MK-6.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (68-70 hours).

Exhibit Dates: 5/85-Present.

Learning Outcomes: Upon completion of the course, the student will understand basic principles, operate, maintain, troubleshoot malfunctions, and repair industrial fluid power systems.

Instruction: Lectures and practical exercises in fundamentals of hydraulics and associated subjects including operations and repair of hydraulics systems and components, hydraulic circuits construction and operation, troubleshooting and adjustment techniques, and maintenance procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in fluid power systems (10/88).

CG-1708-0001

BOATSWAIN'S MATE, CLASS A
(Boatswain's Mate School)

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 8-12 weeks (222-424 hours).

Exhibit Dates: *Version 1:* 11/82-9/86. *Version 2:* 3/79-10/82. *Version 3:* 6/66-2/79.

Objectives: To train enlisted personnel to perform as boatswain's mates.

Instruction: *All Versions:* Lectures and practical exercises in seamanship and associated subjects, including information, nomenclature, and exercises in marlinspike; boat handling; gunnery; cargo handling; piloting; nuclear, biological, and chemical defenses; radiotelephone operation and semaphore communications; and firefighting procedures. See exhibit CG-1701-0016 for course after 10/86. *Version 2:* Includes deck seamanship, damage control procedures, dead reckoning, navigation, maritime law enforcement, and survival techniques. *Version 3:* Includes electronic navigation and visual communications.

Credit Recommendation: *Version 1:* In the vocational certificate category, 10 semester hours in marine related occupations (7/84); in the lower-division baccalaureate/associate degree category, 8 semester hours in marine technology (7/84). *Version 2:* In the vocational certificate category, 8 semester hours in marine technology (12/79); In the lower-division baccalaureate/associate degree category, 6 semester hours in marine technology (12/79). *Version 3:* In the vocational certificate category, 4 semester hours in marine technology (6/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in marine technology (6/74).

CG-1708-0002

BOATSWAIN'S MATE THIRD CLASS BY CORRESPONDENCE

Course Number: 309-9.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 2/76-Present.

Objectives: This is a nonresident course to train Boatswain's Mates at the seaman level.

Instruction: The student is required to read and study seven pamphlets covering six topics. Each lesson has reading assignments followed a series of questions and a comprehensive end-of-course test. The areas of instruction covered by this course are surface preparation and painting; small boat operation; search and rescue; firefighting, watches, duties and record keeping; introduction to basic minor aids to navigation, and Marlinspike seamanship. After successful completion of the course the student will understand the organization manual, watch quarter and station bills, will be able to stand watch, and be able to keep records and logs. The student will also be able to use naviation equipment and maneuver a boat, to know paint systems, safety aspects in painting and stowage, recognize anchor chain markings and parts, and know aids to navigation, their functions, and how to troubleshoot minor aids to navigation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introductory basic seamanship (5/79).

CG-1708-0003

BOATSWAIN'S MATE SECOND CLASS BY CORRESPONDENCE

Course Number: 309; 209-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 1/77-5/82.

Objectives: This a nonresident course to train boatswain's mates at the second-class level.

Instruction: The student is required to read and study text material, solve problems, answer questions, and pass a comprehensive end-of-course examination. The areas of instruction covered are navigation and weather; fire control and gunnery; deck maintenance; small boat handling; cargo handling; stowage; underway replenishment; and seamanship. Upon completion of this course, the student will be able to deal with communications, use various instruments and electronic equipment for navigation and piloting, use tide and current tables, take weather readings and describe the causes of weather, describe fire control organization, identify the functions of various small weapons and know safety precautions when small weapons are used or stowed. Student will also be able to explain deck duties using block and tackle, wire roping, anchoring and block tackle, and will identify equipment and materials used in towing, know safety precautions for handling and stowing cargo, maintain cargo handling equipment, and identify the signals for underway replenishment at sea.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in Seamanship II (5/85).

CG-1708-0004

BOATSWAIN'S MATE FIRST CLASS BY CORRESPONDENCE

Course Number: *Version 1:* 109-6. *Version 2:* 109-5; 109-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 5/83-Present. *Version 2:* 6/78-4/83.

Objectives: To provide training to boatswain's mates at the second class level through reading and studying textual material, performing sample problems, answering lesson questions, and passing the proctored end-of-course examination.

Instruction: *Version 1:* Topics include basic search and rescue, shipboard damage control and stability, the duties of members of a 5"/38 gun mount team, electronic navigation and maneuvering board navigation with emphasis on the use of relative motion radar, and small unit administrative paperwork management. Students are required to successfully complete a proctored end-of-course examination. *Version 2:* The areas of instruction covered include small craft piloting, boat and deck maintenance, rigging and replenishment, the gun captain, damage control repair party, and introduction to aids to navigation. The student will learn to use navigation equipment in piloting small craft; will know and understand the rules of the road; will properly maintain deck spares, repair small craft, rig booms and recognize safety hazards. Student will learn the proper equipment to use in damage control and will recognize basic functions of aids to navigation components, basic theory of weight handling equipment, and the effects of ship stability.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in technical communications (5/85); in the lower-division baccalaureate/associate degree category, 2 semester hours in advanced navigation and 1 in advanced seamanship (1/88). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in advanced seamanship (5/79).

CG-1708-0005

NAVIGATION RULES BY CORRESPONDENCE

Course Number: *Version 1:* 469-2. *Version 2:* 469-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 3/82-Present. *Version 2:* 4/78-2/82.

Objectives: To provide training concerned with the International Regulations for preventing collisions at sea dated 1972 (72 COLREGS) and the United States Inland Rules of the Road.

Instruction: *Version 1:* A nonresident training course including steering and and sailing rules, lights and shapes, sound and light signals, inland rules and pilot rules. There is a proctored end-of-course examination. *Version 2:* A nonresident training course including steering and and sailing rules, lights and shapes, sound and light signals, inland rules and pilot rules. There is a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in navigation (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in navigation rules (5/79).

CG-1708-0006

1. Piloting Navigation (PELNAV) by Correspondence
2. Piloting by Correspondence

Course Number: *Version 1:* 416-4. *Version 2:* 416-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 1/83–Present. *Version 2:* 2/77–12/82.

Objectives: To train personnel in basic navigation practices under piloting and dead reckoning conditions.

Instruction: *Version 1:* Course introduces the student to navigation terminology and the use of applicable sections of the Defense Mapping Agency publication "American Practical Navigator". The course sets forth the basic principles of determining a vessel's position by the use of bearings, soundings, and applicable tables. The use of sextant angles, marine radar, and compass bearings to determine position are covered. Course describes the basic principles and steps involved in setting up a piloting team in order to safely navigate a vessel. Students must pass proctored final exam. *Version 2:* The student will be able to define a line of position and plot lines of position using aids to navigation, shore objects, and radio sources; student will be able to solve advanced piloting problems using running fixes, position circles and running fixes with changes in courses and speed. The course includes discussion on charts, aids to navigation, magnetic compass, dead reckoning, piloting, current sailing and review of how all these fit together in a navigational system of piloting in a boat. There is a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in basic navigation (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in coastal navigation (5/79).

CG-1708-0007

Coxswain Class C

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 4 weeks (154 hours).

Exhibit Dates: 10/82–2/88.

Objectives: To train personnel in the requirements for boat coxswain.

Instruction: Lectures, practical demonstrations, and on the water experience in small boat handling, chart work, navigation rules, safety and rescue techniques, piloting and coastwise navigation. Includes use of LORAN C and magnetic compasses. See CG-1708-0017 for course after 3/88.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in boat handling and 1 in coastwise navigation (7/84).

CG-1708-0008

Compass Systems (COMSYS) by Correspondence

Course Number: 418-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/83–Present.

Objectives: To provide basic knowledge of gyro and magnetic compasses, degaussing ranges and systems and their operation.

Instruction: Course provides a basic introduction to gyro compass use, magnetic compass adjustment to reduce deviation, basic description of magnetism and causes of deviation and description of degaussing systems including ranges and settings.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/85).

CG-1708-0009

Seaman (SN-9) by Correspondence

Course Number: 451-9.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 8/84–Present.

Objectives: To introduce personnel to the duties of seaman.

Instruction: Course includes the operation and maintenance of deck equipment, rigging, wire and line size determination, proper watchstanding procedures, boat lowering operations, life saving equipment, small boat mooring, and rating identification. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic seamanship (5/85).

CG-1708-0010

Deck Seamanship (DKSNS) by Correspondence

Course Number: 433-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/79–Present.

Objectives: To train Coast Guard personnel in deck seamanship.

Instruction: Course includes the following instructional areas: deck maintenance including the use and maintenance of painting/coating application equipment and the planning, supervision, and control of shipboard painting operations; seamanship including the use of wire and synthetic fiber rope, rope maintenance and ground tackle maintenance, shipboard use of accomodation ladders, cargo nets, and scaffolding, cold weather maintenance of deck equipment and de-icing procedures. Also includes the operation and maintenance of deck machinery and the adjustment of standard rigging. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in seamanship and 1 in nautical science (5/85).

CG-1708-0011

Navigation Systems (NAVSYS) by Correspondence

Course Number: 424-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 5/83–Present.

Objectives: To provide an introduction to electronic navigation systems aboard ships.

Instruction: Course includes description and use of basic shipboard electronic navigation systems including LORAN-C, NAVSAT, radio direction finding, OMEGA, DECCA, console, inertial navigation, acoustic doppler and bathymetric navigation. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in nautical science (5/85).

CG-1708-0012

Watchstanding: The Conning Officer (CONOFF) by Correspondence

Course Number: 430-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 5/83–Present.

Objectives: To introduce the fundamental duties, responsibilities and procedures of the conning officer.

Instruction: Course includes theory and basic knowledge in the fundamentals of shiphandling, general duties and related responsibilities of conning officers in restricted waters and in the open sea. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (5/85).

CG-1708-0013

Shiphandling (SPHNG) by Correspondence

Course Number: 426-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/79–Present.

Objectives: To provide basic knowledge of principles of shiphandling for single screw or multiple screw vessels in heavy weather, restricted and unrestricted waters.

Instruction: Course is designed to develop basic knowledge and skills as follows: physical characteristics of ships, maneuvering characteristics, shiphandling fundamentals, heavy weather handling and survival, small boat operation in surf, anchoring, mooring and towing procedures. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic seamanship (5/85).

CG-1708-0014

Deck Watch Officer Navigation Rules (DWONR) by Correspondence

Course Number: 631-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/82–Present.

Objectives: To provide training and familiarization for students in prevention of collisons at sea.

Instruction: Topics include rules of the road encompassing all vessels, both power and sail, lights and shapes, sound and light signals in inland and international waters. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in nautical science (5/85).

CG-1708-0015

Maneuvering Boards (MANBD) by Correspondence

Course Number: 464-1.

Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 5/83–Present.
Objectives: To provide training in solving maneuvering board problems.
Instruction: This course includes reading assignments and solving of maneuvering board problems, including relative motion, course, speed, closest point of approach, danger of collision, station taking, contact interception, true/relative wind vectors and direct plotting methods.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in nautical science (5/85).

CG-1708-0016

Boatswain's Mate Class A

Course Number: BMA.
Location: Reserve Training Center, Yorktown, VA.
Length: *Version 1:* 6–7 weeks (262–264 hours) *Version 2:* 10 weeks (350-355 hours).
Exhibit Dates: *Version 1:* 10/89–Present. *Version 2:* 10/86–9/89.
Learning Outcomes: *Version 1:* Upon completion of the course, the student shall be able to demonstrate personal physical fitness; demonstrate correct method to enter water wearing anti-exposure clothing; identify and use equipment found in a boat crew personal survival kit; deploy and board a four person rescue raft; set up and hoist off the deck using stages and a boatswain chair; properly handle lines while acting as a member of a boat crew; correctly splice double braid and three strand lines; demonstrate correct procedures while anchoring a boat and while weighing anchor; state the duties of the boatswain mate of the watch on board a vessel underway; identify the meanings of various nautical terms; identify equipment found onboard a 41' UTB; perform the duties of a lookout onboard a 41' UTB; perform as part of the crew of a 41' UTB while towing another vessel astern; moor and unmoor a 41' UTB at a pier; stand a helm watch onboard a 41' UTB; identify required lights and shapes in accordance with the rules of the road; determine the depth of water using a fathometer; use information from the Raynav 66 radar; use a VHF-FM Polaris to locate another vessel; use Loran-C to fix a vessel's position; recover a person overboard using a 41' UTB; participate in helicopter operations; use a nautical chart; tie standard knots and know their uses; throw a heaving line; operate a CG-PL pump and an eductor; identify the classes of fire and the extinguising agent for each; operate a carbon dioxide fire extinguisher and a dry chemical extinguisher; demonstrate CPR; repair and paint various types of surfaces; maintain records and logs in accordance with the latest Coast Gurad instructions; and use a boatswain's pipe for standard calls. *Version 2:* Upon completion of the course, the student will be able to demonstrate competence to perform all duties associated with boatswain's mate class A rating.
Instruction: Lectures and practical exercises in physical fitness and survival, line handling and ground tackle, underground operations and watches, rescue and evacuation procedures, navigation and piloting, boat communications, salvage operations, fire fighting, first aid and leadership.
Credit Recommendation: *Version 1:* In the vocational certificate category, 10 semester hours in seamanship (6/90); in the lower-division baccalaureate/associate degree category, 8 semester hours in marine technology (6/90). *Version 2:* In the vocational certificate category, 10 semester hours in marine related occupations (4/89); in the lower-division baccalaureate/associate degree category, 8 semester hours in marine technology (4/89(.

CG-1708-0017

Coxwain Class C

Course Number: COX C.
Location: Reserve Training Center, Yorktown, VA.
Length: 3/88–Present.
Exhibit Dates: 4–5 weeks (154 hours).
Learning Outcomes: Upon completion of the course, the student will be able to qualify as a competent coxwain on the 41-FT UTB; this includes a thorough knowledge of small boat handling, navigation and piloting, search and rescue, construction and design, stability, rules of the road and towing and engineering casualty drills.
Instruction: Lectures, practical demonstrations and the water experience in small boat handling, chart navigation, rules of road, safety and rescue techniques and piloting and coastwise navigation.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in boat handling, 1 in navigation (4/89).

CG-1708-0018

Quartermaster Class A

Course Number: None.
Location: Reserve Training Center, Yorktown, VA.
Length: 12 weeks (420 hours).
Exhibit Dates: 6/87–Present.
Learning Outcomes: Upon completion of the course, the student will be able to function as a third class quartermaster with knowledge and skill training necessary to perform tasks in areas such as computation of navigational data, signaling and navigation equipment and the application of communication and navigational information in organizational and intermediate levels of navigation afloat.
Instruction: Lectures and practical exercises in administration, communications, communications procedures, navigation systems and instruments, navigation rules, compasses and watchstanding.
Credit Recommendation: In the vocational certificate category, 1 semester hour in navigation rules (rules of road) (4/89); in the lower-division baccalaureate/associate degree category, 6 semester hours in navigation (4/89).

CG-1709-0001

Photojournalist School Class (PA2)
by Correspondence

Course Number: 236-2.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: Maximum 52 weeks.
Exhibit Dates: 7/81–1/88.
Learning Outcomes: Upon completion of the course, the student will be able to demonstrate proficiency in the knowledge of basic photographic principles including the use of cameras and lenses, black and white darkroom film processing and printing, use of available light, use of color film, and an introduction to view cameras.
Instruction: Instruction is provided through a non-resident, self-paced study program using a commercial text and a Coast Guard Institute workload and study guide. This course is not task-oriented, but it is comprehensive in content and objectives. Includes a proctored final exam.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in photography (10/87).

CG-1709-0002

Photojournalist First Class (PA1-1) by
Correspondence

Course Number: 136-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: Maximum 52 weeks.
Exhibit Dates: 7/81–8/87.
Learning Outcomes: Upon completion of the course, the student will be able to demonstrate proficiency in the knowledge in the principles and techniques of community, internal and public relations.
Instruction: Instruction is provided through a non-resident, self-paced study program using a commercial text and a Coast Guard Institute workbook and study guide. The course is not task-oriented but is comprehensive in content and objective. Topics include the introduction to contemporary public relations, duties and functions of PR staff, persuasion and public opinion, fact-finding research, planning a PR program, evaluation of a PR program, tools of communication, dealing with the public, use of mass media, media relations, and government-public communications. Includes proctored final exam.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in journalism (public relations) (10/87).

CG-1710-0001

Damage Controlman Class A

Course Number: None.
Location: Training Station, Governors Island, NY; Training Station, Groton, CT.
Length: *Version 1:* 13 weeks (520 hours). *Version 2:* 15 weeks (434 hours). *Version 3:* 16 weeks (587 hours).
Exhibit Dates: *Version 1:* 2/80–2/87. *Version 2:* 5/74–1/80. *Version 3:* 1/64–4/74.
Objectives: To train enlisted personnel to maintain and repair vessels.
Instruction: *All Versions:* Lectures and practical exercises in boat damage repair, including finish and rough carpentry; concrete mixing, pouring, and forming; plumbing fittings and piping; sheet metal; structural steel welding; fire fighting; and first aid. *Version 1:* Includes instruction in building construction techniques for wooden structures.
Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in welding, 3 in basic carpentry, 2 in pipe fitting, 2 in firefighting (2/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in welding, 1 in construction techniques, 1 in firefighting (2/83). *Version 2:* In the vocational certificate category, 5 semester hours in welding, 2 in pipesetting, 2 in maintenance and repair (8/78). *Version 3:* In the vocational certificate category, 12 semester hours in repair and maintenance ashore and afloat (5/74); in the lower-division baccalaureate/associate degree category, 8 semester hours in repair and maintenance ashore and afloat (5/74).

CG-1710-0002

DAMAGE CONTROL WELDING, CLASS C
(Damage Controlman Welding, Class C)
(Damage Controlman Class C)

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 6-7 weeks (226-310 hours).

Exhibit Dates: *Version 1:* 10/80-1/90. *Version 2:* 8/77-9/80.

Objectives: To provide advanced skills in welding (gas and arc) of ferrous and nonferrous materials.

Instruction: Course includes welding fundamentals, metal arc welding, and gas-shielded arc welding. Students will learn fundamentals of flat, horizontal, vertical, and overhead position welding; gas tungsten arc welding to include familiarization with parts, settings, safety precautions, and practical application of the process on steel and aluminum; gas metal arc welding to include familiarization with torch, settings, safety precautions, practical application of the process, and basic theory of aluminum welding.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in welding (2/83). *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in welding (9/78).

CG-1710-0003

DAMAGE CONTROLMAN FIRST CLASS
(DC1) BY CORRESPONDENCE

Course Number: 115-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 2/72-7/86.

Objectives: The purpose of this course is to provide a basic understanding in performing shore structure carpentry, piping layout and maintenance, and sheet metal fabrication.

Instruction: This correspondence course covers basic wood carpentry for building, piping layout and maintenance, sheet metal and sheet plate fabrication and the principles of various types of welding joints, both in ferrous and nonferrous metals, especially aluminum welding. All these activities are tied together in material on cost estimating for buildings. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic wood building carpentry, 1 in sheet metal fabrication, 1 in ferrous and nonferrous welding (5/79).

CG-1710-0004

DAMAGE CONTROLMAN SECOND CLASS
(DC2) BY CORRESPONDENCE

Course Number: 215-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 8/77-9/86.

Objectives: A nonresident course designed to provide basic skills in and understanding of damage control.

Instruction: The areas of instruction covered by the course are nuclear, biological and chemical (NBC) warfare defense, welding principles, shielding metal arc welding, gas-shielded arc welding, oxyacetylane cutting and welding, installing suspended ceilings, acoustical tile, installing roofing, laminated and finishing woods, plumbing, blueprint and diagram reading, and inspection and maintenance of firefighting equipment. There is a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic welding, 2 in blueprint reading, 2 in basic carpentry, 2 in basic plumbing (5/79).

CG-1710-0005

SHORE STRUCTURE MAINTENANCE BY
CORRESPONDENCE

Course Number: 479-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 5/78-1/90.

Objectives: To provide an overview of building and facility maintenance from woodworking machinery, site development and construction to termites and wood decay.

Instruction: This course covers the major aspects of maintenance of buildings and facilities used by Coast Guard shore stations. Materials include woodworking machine and power tools, site development and construction, termites and wood decay, interior wiring, shore structure carpentry, heavy construction methods and materials, cost estimating for facilities, concrete and masonry construction, plumbing and pipefitting.

Credit Recommendation: In the vocational certificate category, 4 semester hours in wooden building maintenance, 2 in concrete and masonry construction (5/79).

CG-1710-0006

PRATT AND WHITNEY FT4A GAS TURBINE
ENGINE OPERATION AND
MAINTENANCE

Course Number: MK-4.

Location: Reserve Training Center, Yorktown, VA.

Length: 1-2 weeks (70 hours).

Exhibit Dates: 5/78-2/88.

Objectives: To train advanced machinery technicians and engineering officers in the operation and maintenance of the 18,000 HP Pratt and Whitney FT-4 gas turbine and its associated components.

Instruction: Lectures and practical exercises pertinent to the Pratt and Whitney FT4A marine gas turbine engine including gas turbine engine operation, control, construction, lubrication, inspection, maintenance and malfunction analysis.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine laboratory (12/79).

CG-1710-0007

GENERAL ELECTRIC LM100 AND SOLAR T-
1000 EMERGENCY GAS TURBINE
SOLAR MAIN PROPULSION
OPERATION AND MAINTENANCE

Course Number: MK-3.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (70 hours).

Exhibit Dates: 9/78-8/79.

Objectives: To train machinery technician petty officers in the operation of the solar T-10005 emergency gas turbine.

Instruction: Classes and practical exercises the theory of gas turbines, nomenclature and system characteristics of the solar T-10005 turbine. Practical experience in maintenance and system requirements.

Credit Recommendation: In the vocational certificate category, 1 semester hour in gas turbine laboratory (12/79).

CG-1710-0008

FIRE TUBE AND BOILER/FLASH TYPE
EVAPORATOR CLASS C

Course Number: MK-5.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (63 hours).

Exhibit Dates: 7/81-Present.

Objectives: To train engineers in the operation of fire tube boilers and flash evaporators.

Instruction: Lectures and laboratory experience in the theory, maintenance, and operation of boilers and evaporators.

Credit Recommendation: In the vocational certificate category, 3 semester hours in boiler operation, maintenance and repair (7/84).

CG-1710-0009

270' WMEC MAIN PROPULSION CONTROL
AND MONITORING SYSTEM

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (112 hours).

Exhibit Dates: 8/82-4/85.

Objectives: To train personnel to operate and repair propulsion system of a cutter.

Instruction: Lectures and laboratory experiences in electrical diesel engine systems, propeller pitch control, monitoring systems and systems troubleshooting. After 4/85, see CG-1710-0013.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in marine propulsion system maintenance and repair (7/84).

CG-1710-0010

DAMAGE CONTROLMAN THIRD CLASS
(DC3) BY CORRESPONDENCE

Course Number: 315-6; 315.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 9/83-5/87.

Objectives: To provide an understanding of general building construction and welding as they apply to damage control.

Instruction: Areas of instruction cover hand and power tools, pumps, concrete handling, floor tile installation, wood framing, basic plumbing repairs, basic welding and damage control. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in hand and power tools and 1 in building maintenance (5/85).

CG-1710-0011

DAMAGE CONTROL DECK GROUP RATINGS
(DCDKGR) BY CORRESPONDENCE

Course Number: 477-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/79-Present.

Objectives: To provide training in damage control including organization, firefighting and watertight integrity.

Instruction: Course provides limited coverage of damage control organization, shipboard fires, battle damage repair procedures, compartment testing and inspection, and water tight integrity determinations. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (5/85).

CG-1710-0012

High Reliability Soldering Class C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 2 weeks (71 hours).

Exhibit Dates: 12/85-Present.

Objectives: To provide specialized training in soldering using the PRC-151 soldering unit.

Instruction: Practical training in the use and maintenance of the PRC-151 power soldering system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in high reliability soldering laboratory practices (6/85).

CG-1710-0013

1. 270' WMEC Machinery Plant Control and Monitoring System
2. 270' WMEC Main Propulsion Control and Monitoring System (Electrical) Operation and Maintenance Class C

Course Number: EM-25.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 4 weeks (140-148 hours). *Version 2:* 3 weeks (110-112 hours).

Exhibit Dates: *Version 1:* 10/90-Present. *Version 2:* 5/85-9/90.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be trained on propulsion system control, control console and control software, and will be able to make necessary repairs, and will be able to calibrate instrumentation used as input for the control system data processor. *Version 2:* Upon completion of the course, the student will be trained on propulsion system control, control console and control software, and will be able to make necessary repairs.

Instruction: *Version 1:* Lectures and laboratory experiences in electrical diesel engine systems, propeller pitch control, monitoring systems and systems troubleshooting. In addition, the course covers calibration of transducers, thermistors, running of diagnostic tapes to troubleshoot the data processor. *Version 2:* Lectures and laboratory experiences in electrical diesel engine systems, propeller pitch control, monitoring systems and systems troubleshooting.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in marine propulsion electrical control maintenance (10/88). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in marine propulsion electrical control maintenance (10/88).

CG-1710-0014

Damage Controlman Class A

Course Number: DCA.

Location: Reserve Training Center, Yorktown, VA.

Length: 13 weeks (450 hours).

Exhibit Dates: 3/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate the use of hand and power woodworking tools, perform rough carpentry tasks; describe and use of pipefitting and sheet metal tools. Will demonstrate and use oxy-acetylene equipment for cutting and welding observing all safety procedures. Will be able to explain various types of firefighting equipment, and breathing apparatus.

Instruction: Lectures, demonstrations, and laboratories in the use of woodworking tools and equipment, rough carpentry, concrete forming, pipefitting, and sheet metal work. Exercises in oxy-acetylene and electric arc cutting, brazing, and welding. Shipboard firefighting and hazardous material handling are covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in building construction technology, 2 in oxy-acetylene welding, 3 in electric arc welding, and 1 in shipboard firefighting and hazardous material handling (10/88).

CG-1710-0015

Damage Controlman (DC) Advanced Reserve Active Duty for Training (AD7) Class C

Course Number: DC ADV(R).

Location: Reserve Training Center, Yorktown, VA.

Length: 1-2 weeks (69-72 hours).

Exhibit Dates: 2/88-Present.

Learning Outcomes: Upon completion of the course, the student will be able to erect a light frame structure, determine the building materials required, show the proper use of plumbing tools, perform visual and dye-penetrant weld tests. The student will be able to describe the testing and handling of various hazardous materials.

Instruction: Lectures, demonstrations, and practical exercises in light frame structures, including construction and estimating. Visual and dye-penetrant weld tests are covered. Testing and handling of hazardous materials is covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in building construction estimating (10/88).

CG-1710-0016

Aluminum Welding Class C

Course Number: DC-2.

Location: Reserve Training Center, Yorktown, VA.

Length: 4 weeks (144-146 hours).

Exhibit Dates: 10/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, set-up, and complete various welding projects using both the gas and metal arc and the gas tungsten arc processes and equipment, observing all safety procedures.

Instruction: Lectures, demonstrations, and practical exercises in the use and operation of the gas metal arc and gas tungsten arc welding processes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in gas metal arc welding, and 2 in gas tungsten arc welding (10/88).

CG-1710-0017

Steel Welding Class C

Course Number: DC-1.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (84 hours).

Exhibit Dates: 11/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe, set-up, and complete various welding projects using the shielded metal arc process and equipment observing all safety procedure, demonstrate the procedures to perform non-destructive testing techniques and air carbon arc cutting.

Instruction: Lectures, demonstration, and practical exercises in shielded metal arc welding, non-destructive testing, and air carbon arc cutting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in shielded metal arc welding (10/88).

CG-1710-0018

Pratt and Whitney FT4A Gas Turbine

Course Number: MK-4.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (70-74 hours).

Exhibit Dates: 3/88-Present.

Objectives: Upon completion of the course, the student will be able to operate, maintain, and troubleshoot malfunctions in a Pratt and Whitney FT4A gas turbine engine of 18,000 hp, and will know inspection techniques and the use of inspection instruments.

Instruction: Lectures concentrating on gas turbine lubrication, speed control, burner and component inspection. The manufacturer's maintenance procedures are studied and practiced in a laboratory setting; there is some instruction in troubleshooting and some in malfunction analysis.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gas turbine laboratory (10/88).

CG-1710-0019

Damage Controlman Third Class (DC3) by Correspondence

Course Number: 315-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 6/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to read basic construction blueprints and identify components of fire fighting, flood control and emergency repair equipment, and to understand principles of basic carpentry techniques, basic plumbing techniques, and basic masonary techniques.

Instruction: Topics include general safety, measuring devices, blueprints and diagrams, carpentry, masonary, plumbing, sewage, welding, cutting, allied processes, damage control, firefighting, and CBR (Chemical, Biological, Radiological) defense, and administration. Training is provided in a nonresident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in building maintenance and 1 in welding technology (6/90).

CG-1710-0020

Damage Controlman First Class By Correspondence

Course Number: 0115-5; 0115-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 8/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify methods of light wood frame instruction, identify masonry construction procedures, and aluminum welding GTA and MTA procedures and safety precautions, identify duties of damage control repair party leads, identify components of Chemical Hazard Response Initiation System (CHRIS), and identify procedures used for set-up and operation of a chemical/biological/radiological decontamination station.

Instruction: Topics include carpentry, masonry, plumbing, welding, cutting, allied processes, damage control, firefighting, CBR defense, and administration. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in construction techology and 1 in aluminum welding technology (6/90).

CG-1710-0021

Damage Controlman Second Class (DC2) by Correspondence

Course Number: 0215-7; 215-8.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify wood framing systems and structural members, identify roofing materials and installation procedures, various types of pipe and pipe fittings, copper tube and tube fittings, identify various welding architectural, piping and damage control symbols and diagrams, and identify actions taken by scene leader of a damage control party at the scene of a fire.

Instruction: Topics include framing and roofing buildings; finishing exterior walls; installing acoustical tile ceilings; plumbing pipe, valves, and fixtures; welding castings; and blueprint and diagram reading. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hours in basic welding and 2 in carpentry and plumbing OR 3 in basic construction trades (6/90).

CG-1712-0001

Engineman, Class A

Course Number: None.

Location: Training Center, Groton, CT; Reserve Training Center, Yorktown, VA.

Length: 14–16 weeks (310-581 hours).

Exhibit Dates: 8/66–4/79.

Objectives: To train personnel to perform as engineman strikers and enginemen.

Instruction: Lectures and practical exercises in the functions of engineman strikers and enginemen, third class, including tools and measuring instruments, gas welding and cutting, hydraulics, basic engines, engine fuel systems, general motors unit injector, engine controls, GM-71 auxiliary pumps, engine overhaul, diesel engine troubleshooting, lubricating oil testing, jacket water treatment and testing, centrifugal purifiers, electricity, outboard motors, boilers, gas turbines, refrigeration, and power transmission systems.

Credit Recommendation: In the vocational certificate category, 6 semester hours in diesel engines and auxiliaries (6/75); in the lower-division baccalaureate/associate degree category, 4 semester hours in automotive technology, 4 as an elective in mechanical technology (6/75).

CG-1712-0002

Diesel Engine and Electrical Operation and Maintenance (Caterpillar Models D-397–399, D-333, D-343, D-353, D-379)

Course Number: MK-24.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks (103–105 hours).

Exhibit Dates: 10/79–3/88.

Objectives: To train qualified enlisted personnel (machinery technicians) in diesel operation and maintenance.

Instruction: Students learn the operation and maintenance of 200-300 KW Caterpiller diesel generator sets including disassembly and inspection of diesel engine camshaft bearings, connecting rods, pistons, cylinder liners and head assemblies, fuel pump assemblies, accessory drive voltage control components, brushes, sliprings, bearings and generator drive alignment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in diesel generator sets (12/79).

CG-1712-0003

270' S/S Generator Waste Heat Recovery System and Evaporator Operation and Maintenance

Course Number: MK-27.

Location: Reserve Training Center, Yorktown, VA.

Length: 2–3 weeks (105 hours).

Exhibit Dates: 12/81–4/85.

Objectives: To provide the skills required to operate, maintain, and troubleshoot a diesel engine, a waste water heat recovery system and an evaporator.

Instruction: Topics include system major components, system operation, system maintenance, and system troubleshooting of diesel engine, waste heat recovery and distilling plant.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in diesel engine theory and maintenance (7/84).

CG-1712-0004

Caterpillar Diesel Engine Maintenance Class C

Course Number: MK-24.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (68–72 hours).

Exhibit Dates: 4/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to do routine maintenance, troubleshooting, and repair on small diesel engines. Caterpillar model D379 and similar are used as example engines.

Instruction: Students learn maintenance and repair procedures for small Caterpillar diesel engines by a combination of lectures and laboratories. Engines are studied, disassembled, repaired, reassembled, and tested. Also, engine condition is assessed by performance tests.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in diesel engine maintenance/repairs (10/88).

CG-1712-0005

270' WMEC S/S Generator, Waste Heat Recovery System and Evaporator Operation and Maintenance, Class C

Course Number: MK-27.

Location: Reserve Training Center, Yorktown, VA.

Length: 2-3 weeks (105–106 hours).

Exhibit Dates: 5/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to start-up, operate, and service the Caterpillar D398 diesel engine and to service the engine systems related to lubrication, cooling, fuel, electrical, and air starting. The student will understand the operation and servicing of the waste heat recovery system and the 2-T-CFE-6-SE distilling plant.

Instruction: Approximately twenty percent of this course is devoted to the Caterpiller 398 diesel engine components operation and another twenty percent to servicing its components. The remaining sixty percent of the course concentrates on the waste heat recovery system and the operation of the distilling plant. Students are instructed in its component troubleshooting and repair. Instruction is by combination of one-third lecture and two-thirds laboratory using actual equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in diesel engine with heat recovery system (10/88).

CG-1712-0006

VT903M Cummins Diesel Engine Disassembly-Assembly and Tune-up

Course Number: CUMM (R).

Location: Reserve Training Center, Yorktown,VA.

Length: 2 weeks (70–72 hours).

Exhibit Dates: 6/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to disassemble, inspect components, and reassemble a Cummins VT903M diesel engine. Engine tune-up procedures are covered.

Instruction: Lectures and practical laboratory exercises are used to teach the basic principles of diesel engines along with disassembly/assembly and tune-up of an actual engine.

Credit Recommendation: In the vocational certificate category, 1 semester hour in diesel engine laboratory (10/88).

CG-1712-0007

Lister Diesel Overhaul and Engine Power System Equipment Maintenance

Course Number: ANC-M.

Location: Reserve Training Center, Yorktown, VA.

Length: 1 week (44-45 hours).

Exhibit Dates: 4/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to inspect, troubleshoot, and repair a Lister Diesel Engine, perform inspection and preventive maintenance on a Standard Fuel Oil Day Tank and associated Environmental Control Unit and Power Controller.

Instruction: Lectures and practice in the inspection, troubleshooting, complete disassembly, repair, reassembly, and testing of the Lister Diesel Engine and associated Power System Controller.

Credit Recommendation: In the vocational certificate category, 1 semester hour in diesel engine repair (6/90).

CG-1714-0001

Electrician's Mate Class A
(Electrician's Mate School)

Course Number: None.

Location: Training Station, Groton, CT; Training Center, Governors Island, NY.

Length: *Version 1:* 17 weeks (675 hours). *Version 2:* 17 weeks (587 hours). *Version 3:* 16 weeks (580 hours).

Exhibit Dates: *Version 1:* 1/80–4/86. *Version 2:* 1/78–12/79. *Version 3:* 8/61–12/77.

Objectives: To train enlisted personnel to inspect, maintain, and operate electrical equipment.

Instruction: *Version 1:* Lectures and practical exercises on basic AC/DC circuits, and applying Ohm's law and Kirchhoff's laws to simple series and parallel circuits with one source. Topics include: properties of resistors, inductors, and capacitors; RL time constant and waveform response; simple RL, RF and RLC circuit analysis using trig functions, phaser diagrams and power computations; transformer construction, characteristics and operating types including 30 transformers; an in-depth analysis of AC/DC generators and motors including 30, AC/DC controllers, starters, maintenance of shipboard power distribution panels and cable repair, characteristics of vacuum tubes, semiconductor diodes, gyroscope and synchro construction, operation and maintenance, and maintenance procedures for shipboard motors, generators and power distribution systems. *Version 2:* Instruction is oriented toward teaching the fundamentals of generation, control and distribution of electricity with specific emphasis on equipment used by the Coast Guard. *Version 3:* Lectures and practical exercises in mathematics review, DC and AC circuits, transformers, DC motors and generators, alternators, synchronous and asynchronous three-phase motors, simple-phase motors, and controllers.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in AC/DC circuit theory, 6 in AC/DC motors and generators, 2 in electronic circuits(2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in AC/DC motors and generators, 3 in AC/DC motor control (2/83). *Version 2:* In the vocational certificate category, 6 semester hours in electrical maintenance (8/78). *Version 3:* In the vocational certificate category, 9 semester hours in electricity (6/75); in the lower-division baccalaureate/associate degree category, 6 semester hours in electricity on the basis of institutional evaluation (6/75); in the upper-division baccalaureate category, 3 semester hours in electricity on the basis of institutional evaluation (6/75).

CG-1714-0002

1. Gunner's Mate, Class A
   (GM A)
   (Gunner's Mate Basic)
2. Basic Gunner's Mate, Class A

Course Number: None.

Location: *Version 1:* Training Center, Governors Island, NY. *Version 2:* Training Center, Groton, CT.

Length: 11–18 weeks (343–630 hours).

Exhibit Dates: *Version 1:* 1/72–5/86. *Version 2:* 6/66–12/71.

Objectives: To train enlisted personnel to perform as gunner's mates.

Instruction: *Version 1:* Lectures and practical exercises to include mathematics and physical science principles applied to ordnance supplies and equipment, use of hand and cutting tools, measuring instruments, and application of electrical circuitry and hydraulics to pumps, valves and transmissions and other ordnance systems. *Version 2:* Lectures and practical exercises in basic mathematics, hand tools and basic machines, electricity, ammunition, basic hydraulics, power drive and projectile hoists, and small arms.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in mechanical, electrical or fluid power technology and related mathematics/science, 1 in inspection/bench work (2/83); in the lower-division baccalaureate/associate degree category, 2 semester hours in mechanical, electrical or fluid power technology and related mathematics/science, 1 in inspection/bench work (2/83). *Version 2:* In the vocational certificate category, 3 semester hours in electricity, 3 in basic mathematics, 3 in hydraulics, 3 in machine shop (5/74).

CG-1714-0003

Aviation Electrician's Mate, Second Class, by Correspondence
(Aviation Electrician Mate, Second Class, by Correspondence)

Course Number: 201-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/77–9/86.

Objectives: To provide an overview of line safety and maintenance management while providing specific knowledge on the aircraft electrical systems and instruments.

Instruction: This correspondence course contains line safety measures, maintenance management systems, aircraft hardware, corrosion and its control. In addition it covers alternating current (a/c) electrical maintenance techniques, use of meters, electrical symbols, types of instruments and test equipment. It also covers aircraft storage, batteries, generators, power systems and their control devices. Course has required end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electricity, 1 in aircraft instruments (1/79).

CG-1714-0004

Aviation Electrician's Mate, First Class, by Correspondence
(Aviation Electrician Mate, First Class, by Correspondence)

Course Number: 101-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 8/77–11/86.

Objectives: To acquaint the student with Coast Guard administrative procedures and also provide knowledge of alternating current (a/c) and basic electronic circuitry theory.

Instruction: This correspondence course contains a description of the organization of the Coast Guard aircraft management system, its logbooks, and associated records. The theory of basic types of electronics circuits, electron amplifiers, and oscillators is presented. Basic theory of alternating current, inductive and capacitive reactance, power systems and electronic components is explained. Course has no laboratory component; proctored end-of-course examination is required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronics (1/79).

CG-1714-0005

Electrician's Mate Third Class by Correspondence
(Electrician's Mate Third Class by Correspondence)

Course Number: 319-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 8/77–4/90.

Objectives: To present basic electricity through semi-conductor devices and the theory of operation and maintenance on AC and DC motors and generators.

Instruction: This correspondence course offers basic AC and DC electricity including series and parallel circuits, inductance, capacitance, and impedance. Theory and maintenance of AC and DC motors and generators, transformers, and batteries are covered. There is a brief introduction to the theory and testing procedures on transistor and semiconductor devices. Course provides no laboratory experience. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electricity/electromechanical technology (1/79).

CG-1714-0006

Gunner's Mate, Class C

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 10 weeks (316 hours).

Exhibit Dates: 1/74–8/80.

Objectives: To provide advanced training in the use of antisubmarine warfare equipment, fire control, and 5' gun use.

Instruction: Course teaches administration and management of various ordnance systems and the operation, adjustment, and maintenance of weapons and associated equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (9/78).

CG-1714-0007

Gunner's Mate Advanced
(Gunner's Mate Advanced ADT)

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (75 hours).

Exhibit Dates: 4/77–12/79.

Objectives: To improve the knowledge of reservists serving as first class gunner's mates.

Instruction: Course includes training in service, maintenance, and operation of various gunnery systems used by the Coast Guard.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (9/78).

CG-1714-0009

Gunner's Mate Second Class (GM2) by Correspondence

Course Number: *Version 1:* 229-4. *Version 2:* 229-3. *Version 3:* 229-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 104 weeks. *Version 3:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 3/85-Present. *Version 2:* 5/80-2/85. *Version 3:* 5/70-4/80.

Objectives: To provide personnel with the knowledge and skills to understand the operation and perform maintenance procedures on specific weapons and their components.

Instruction: *Version 1:* Provides instruction in DC electricity, electrical supply systems, fire control system electrical circuits, MK56 gun fire control system, safety, torpedo launching fire control equipment, torpedo loading and unloading, projectile hoist MK2, Browning .50 caliber machine gun, and the M60 machine gun. Students are required to successfully complete a proctored end-of-course examination. *Version 2:* Provides instruction in basic electricity, hydraulic system components, the fuse setting, projectile hoist, the 5'/38 rammer machine gun, Browning .50 caliber machine gun, M60 machine gun, surface vessel torpedo tube MK32. Students are required to successfully complete a proctored end-of-course examination. *Version 3:* The nonresident course includes basic electricity, hydraulic system components, the fuse setting, projectile hoist, the 5'/38 rammer machine gun, surface vessel torpedo tube MK32. There is a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in DC circuits (5/85). *Version 2:* In the vocational certificate category, 2 semester hours in basic hydraulics, 2 in DC circuits (5/85). *Version 3:* In the lower-division baccalaureate/associate degree category, 2 semester hours in basic hydraulics, 2 in basic electricity (5/79).

CG-1714-0010

Electrician's Mate Second Class by Correspondence

(Electrician Mate Second Class by Correspondence)

Course Number: 219-8.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 11/77-8/82.

Objectives: Course requires student to study basic electrical and electronic principles and circuit theory as applied to synchro systems, AC and DC motors and generators as well as selected control and protection devices.

Instruction: This is a correspondence course with no formal laboratory experience required. Basic principles of AC and DC circuits as applied to electrical machines and their control and protective devices are included. Motor starters, protective relay equipment, magnetic amplifiers, synchros and transformers are covered in limited detail. Solid-state electronic amplifiers, regulated power supplies, and selected control and wave-shaping devices and circuits are presented. Course includes proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical/electronic theory (1/79).

CG-1714-0011

Electrician's Mate First Class by Correspondence

(Electrician Mate First Class by Correspondence)

Course Number: 119-3; 119-4; 119-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 11/77-Present.

Objectives: To present the procedures for maintenance and repair of motors and generators, and an introduction to digital computer concepts, terminology, and circuits.

Instruction: This correspondence course presents the procedures for the maintenance and repair of motors and generators including cleaning, removing and replacing bearings, commutators and slip rings, and testing. Also covered is an introduction to voltage and frequency regulators, power protective devices, and types of controllers, as well as an introduction to digital computer principles including number systems, Boolean algebra, logic gates, flip-flops, counters, registers, decoders and adders. The course requires a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electrical power theory (1/79); in the lower-division baccalaureate/associate degree category, 1 semester hour in digital electronics theory (1/79).

CG-1714-0012

Gunner's Mate First Class (GM1) by Correspondence

Course Number: 129-1; 129-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 3/74-1/90.

Objectives: To provide training for the second class gunner's mate to progress to first-class status.

Instruction: This nonresident course covers administration, planned maintenance systems, ammunition, explosives, electrical power system components, the General Electric drive, dual purpose gun, alignment, and fire control systems. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electricity, 2 in fundamentals of synchros, 1 in hydraulics (5/79).

CG-1714-0013

Gunner's Mate A School, Phase II (Advanced Electricity, 3"/50 Caliber Gun, 5'/38 Caliber Gun)

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 3-8 weeks (90-220 hours).

Exhibit Dates: 9/80-Present.

Objectives: To train personnel in advanced electricity as it pertains to two specific gun mounts.

Instruction: Lectures and practical exercises in troubleshooting and preventive maintenance of a particular gun mount including firing, lighting, heating, AC/DC circuits, magnetism, transformers, motors, generators and synchros. The 8 week version of this course includes electrohydraulic systems and drives.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, for those students completing the three week version of this course, 2 semester hours in basic electricity; for those completing the 8 week version, 2 semester hours in basic electricity and 1 in basic hydraulics (2/83).

CG-1714-0014

Aviation Electrician's Mate (AE) Class A Phase 1

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 12-13 weeks (426 hours).

Exhibit Dates: 12/82-Present.

Objectives: To provide training to fulfill requirements for advancement to Aviation Electrician Third Class (AE3).

Instruction: Topics include handling and servicing of aircraft; inspecting and maintaining aircraft electrical and instrument systems, including power generation, conversion, and distribution systems; interior lighting; electrical components of aircraft controls, including airframe, engine, propeller, and utility control starters; starting controls and ignition system components; aircraft engine, flight control instruments; instrument systems and non-instrument indicating warning systems, automatic flight control systems, flight director systems; testing and adjusting auxiliary electrical power units and test equipment; supervising the operation of aviation electrical shops.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft basic electricity, 3 in basic alternating current (AC) theory, 3 in introduction to electronics (6/85).

CG-1714-0015

HH3F Automatic Flight Control System (AFCS) and Selected Electrical Maintenance Class C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 3 weeks (110 hours).

Exhibit Dates: 1/81-Present.

Objectives: To provide training necessary to service, inspect, maintain, and repair the Automatic Flight Control System (AFCS), A/A24G-39 Heading Attitude Reference System, AN/AYN-2 Flight Director systems and associated aircraft subsystem.

Instruction: Topics include the operation of individual systems, subsystems, and modules; practical application in testing, using specified test equipment, calibration, necessary adjustments, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in aircraft electrical systems and automatic flight control system troubleshooting (6/85).

CG-1714-0017

Gunner's Mate Class A

Course Number: GMA.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 9 weeks (311 hours). *Version 2:* 11 weeks (370-380 hours).

Exhibit Dates: *Version 1:* 10/89-Present. *Version 2:* 6/86-9/89.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to solve basic electrical circuit problems, understand circuit symbols, read circuit diagrams, use a multimeter/DVM and megger. The student will be able to read and interpret fluid power circuit diagrams, do basic fluid power calculations utilizing Paxcal's Law, understand how fluid power circuits are constructed and understand the operating characteristics of fluid power components. The student will understand and will practice safety precautions when working on electrical and hydraulic circuits. *Version 2:* Upon completion of the course, the student will be able to solve basic electrical circuit problems, read circuit diagrams, use a multimeter and megger. In addition, the student will be able to read fluid power circuit diagrams, do basic calculation with Pascal's law, understand how fluid power circuits are constructed, and understand the operating characteristics of fluid power components.

Instruction: *Version 1:* The course is conducted using a combination of lectures, demonstrations, and video laboratories. The first part of the course covers basics of electriticy and fluid power. The second part is entirely oriented toward operation of weapons. *Version 2:* The course is conducted using a combination of lectures, demonstrations, and laboratories. The first part of the course covers basics of elctricity and fluid power. The second part is entirely oriented toward operation of weapons.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electricity, 1 in fluid power (9/90) *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electricity with laboratory, 1 in basic fluid power (10/88).

CG-1714-0018

Electrician Mate Class A

Course Number: EMA.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 13 weeks (466 hours). *Version 2:* weeks (590-591 hours).

Exhibit Dates: *Version 1:* 10/88–Present. *Version 2:* 5/86–9/88.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to demonstrate an understanding of AC and DC circuits, including problem solving. The student will be able to use standard electrical test equipment and electrical troublshooting procedures; follow standard safety procedures, explain the use and function of resistors, inductors, capacitors, generating batteries, voltage regulators, motors, circuit protectors, and electrical lighting and power distribution. The student will be able to show a knowledge and use of electrical devices such as amplifier circuits, and gyrocompasses, and will be able to use basic hand tools, machine tools and wiring tools. *Version 2:* Upon completion of the course, the student will be able to demonstrate an understanding of DC and AC circuits, including problem solving. Student will be able to use standard test equipment and troubleshooting procedures, follow safety procedures, explain the use of resistors, inductors, capacitors, generating batteries, regulators, motors, circuit protectors, and electrical lighting and power distribution. The student will also be able to show a knowledge of electronic devices, amplifier circuits, and gyrocompasses, and will be able to use basic hand tools, machine tools, and wiring tools.

Instruction: *Version 1:* Lectures and practical exercises in AC/DC circuits, and applying Ohm's law and Kirchhoff's laws to simple series and parallel circuits with one source. Topics include: properties of resistors, inductors and capacitors; RL time constant and waveform response; simple RL, RF, and RLC circuit analysis using trig functions, phaser diagrams, and power computations; transformer construction, characteristics and operating types including 30 transformers; an in-depth analysis of AC/DC generators and motors including AC/DC controllers and starters; maintenance of shipboard power distribution panels and cable repair; characteristics of vacuum tubes, semiconductor diodes, gyroscope and synchro construction, operation, and maintenance; and maintenance procedures for shipboard motors, generators, and power distribution systems. *Version 2:* Lectures and practical exercises in AC/DC circuits, and applying Ohm's law and Kirchhoff's laws to simple series and parallel circuits with one source. Topics include: properties of resistors, inductors and capacitors; RL time constant and waveform response; simple RL, RF, and RLC circuit analysis using trig functions, phaser diagrams, and power computations; transformer construction, characteristics and operating types including 30 transformers; an in-depth analysis of AC/DC generators and motors including AC/DC controllers and starters; maintenance of shipboard power distribution panels and cable repair; characteristics of vacuum tubes, semiconductor diodes, gyroscope and synchro construction, operation, and maintenance; and maintenance procedures for shipboard motors, generators, and power distribution systems.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in AC and DC theory, 6 in AC and DC motors and generators (9/90). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in AC/DC circuit theory, and 6 in AC/DC motors and generators (10/88).

CG-1714-0019

Small Boat Engineering

Course Number: SBE-(R).

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (70-75 hours).

Exhibit Dates: 6/86–Present.

Learning Outcomes: Upon completion of the course, the student will understand the principle of operation of electrical components on small engines (starters, generators, spark distributors and alarm systems) as well as motors and controls for dewatering pumps. Students will have mastered the use of electrical volt, current and resistance meters, to perform fault detection and repair service on the above equipment. Student will also be able to operate and maintain small gasoline and diesel engines.

Instruction: Half of the course is devoted to teaching the principles of operation of engine electrical components, starting with the most basic theory of electricity. The other half of the course is laboratory work on servicing and repairing this type of equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hours in electrical components for engines and ship alarms.

CG-1714-0020

Electrician Mate Advanced Reserve Active Duty for Training

Course Number: EM-ADV-(R).

Location: Reserve Training Center, Yorktown, VA.

Length: 1-2 weeks (70-73 hours).

Exhibit Dates: 4/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use basic electrical meters to measure voltage current insulation resistance, frequency, and rms values. The student will also be able to do basic AC/DC circuit analysis, decimal to binary conversions, and mathematical logic gates to truth tables.

Instruction: This course is taught by a combination of lecture and laboratory. Topics covered include use of meters, Ohm's law, electrical power, series/parallel circuits, troubleshooting for faulty electrical components, binary numbers, truth tables and logic gates.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical laboratory (10/88).

CG-1714-0021

378 Class WHEC Control Systems Operation and Maintenance Class C

Course Number: EM-18.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (70 hours).

Exhibit Dates: 3/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and perform preventive maintenance on console cards for the main propulsion control systems for the 378 foot Coast Guard cutter.

Instruction: Lectures and practical exercises in component and logic symbols, console operating conditions and component troubleshooting of the main propulsion systems of the 378 foot class of Coast Guard cutter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hours in console card troubleshooting and repair (10/88).

CG-1714-0022

Aviation Electrician's Mate First Class (AE1) by Correspondence

Course Number: 101-4; 101-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 12/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify the general procedures for aircraft receipt and transfer in accordance with Engineering Maintenance Manual, follow correct procedures for requesting manufacturing and/or open purchase of aeronautical equipment, select the correct type of quality assurance inspector, identify the limitations and capabilities of local repair and list the procedures for salvage and damage control of electronic components in accordance with accepted Coast Guard standards.

Instruction: The major topics covered are equipment purchase, quality control, salvage and damage control. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/90).

CG-1714-0023

Electrician's Mate Second Class (EM3) by Correspondence

Course Number: 219-9; 219-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 9/82–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot shipboard power and lighting distributions systems, AC/DC motors and generators; explain the theory, operation, and application for the following: synchro systems, rotary amplifiers, magnetic amplifiers, and voltage regulators; use the oscilloscope to troubleshoot solid state and logic circuits; describe the procedures for testing electrical safety devices and control circuits.

Instruction: Topics include power and lighting distribution systems, theory and aplication of synchro systems, amplifiers, and regulators. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electrical/electronic theory (6/90).

CG-1714-0024

Electrician's Mate Third Class (EM3) by Correspondence

Course Number: 319-8.

Location: Coast Guard Institute, Oklahoma City, Ok.

Length: Maximum 104 weeks.

Exhibit Dates: 5/90–Present.

Learning Outcomes: Upon completion of the course, the student will be able to maintain small boat electrical systems, troubleshoot and perform preventative maintenance on motors and generators, explain the theory and application of transformers, use the VOM in circuit troubleshooting, select and install electrical cable for a particular application and describe the common danger encountered while working with electrical equipment.

Instruction: This correspondence course offers basic AC and DC electricity including series and parallel circuits, inductance, capacitance, and impedance, theory and maintenance of AC and DC motors and generators, transformers, and batteries. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 3 semester hours in electro/mechanical technology (6/90).

CG-1714-0025

Aviation Electrician's Mate Second Class (AE2) By Correspondence

Course Number: 201-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe the operational function of test equipment provided for field level maintenance; procure test equipment, tools and materials using aircraft parts catalogs and supply forms; maintain shop files of technical publications, directives and manuals; list possible methods of reducing noise interference; replace aircraft wiring and associated hardware; identify the basic operating principles of aircraft heating and air conditioning systems; perform bench test procedures for aircraft flight control and stabilization systems; describe the basic principles and application of modulator, demodulator, signal discriminator circuits and power amplifier circuits.

Instruction: The major topics covered are field level maintenance, document maintenance, aircraft heating and air conditioning systems, bench test flight control and stablization systems. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in avionics instruments (6/90).

CG-1715-0001

Aviation Electronics Technician, Class A

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC; Aviation Repair and Supply Center, Elizabeth City, NC; Aircraft Repair and Supply Center, Elizabeth City, NC; Training Center, Groton, CT.

Length: *Version 1:* 27 weeks (878 hours). *Version 2:* 28 weeks (1000–1015 hours). *Version 3:* 16–31 weeks (513–994 hours).

Exhibit Dates: *Version 1:* 12/82–Present. *Version 2:* 2/70–11/82. *Version 3:* 12/65–1/70.

Objectives: To provide selected enlisted personnel with the understanding and knowledge necessary to fulfill the requirements for Aviation Electronics Technician, Third Class.

Instruction: *Version 1:* Topics include electronics fundamentals, theory of operation of airborne electronics systems, troubleshooting and testing of airborne electronics systems, and operating associated test equipment. *Version 2:* Electronics fundamentals; theory of operation of airborne electronics systems; troubleshooting and testing airborne electronics systems; operating associated test equipment. Lecture and testing (699 hours) and laboratory (281 hours) with approximately 70% of time devoted to electronics topics; remainder is devoted to military-specific subjects. *Version 3:* Electronics fundamentals; theory of operation of airborne electronics systems; troubleshooting and testing airborne electronics systems; operating associated test equipment. Lecture and testing (699 hours) and laboratory (281 hours) with approximately 70% of time devoted to electronics topics; remainder is devoted to military-specific subjects.

Credit Recommendation: *Version 1:* In the vocational certificate category, 15 semester hours toward a certificate in electronics technology (6/85); in the lower-division baccalaureate/associate degree category, 1 semester hour in theory of flight/aircraft performance, 9 in electronic fundamentals/introduction to electrical engineering (6/85); in the upper-division baccalaureate category, 2 semester hours in electricity and electronics (6/85). *Version 2:* In the vocational certificate category, 15 semester hours toward a certificate in electronics technology (9/77); in the lower-division baccalaureate/associate degree category, 3 semester hours as an elective in electronics (9/77). *Version 3:* In the vocational certificate category, 21 semester hours for technical courses and 3 in mathematics (3/74); in the lower-division baccalaureate/associate degree category, 12 semester hours in electricity and electronics (3/74); in the upper-division baccalaureate category, 4 semester hours in electricity and electronics (3/74).

CG-1715-0002

1. Telephone Technician A School
2. Telephone Technician A School
3. Telephone Technician School
4. Telephone Technician, Class A

Course Number: None.

Location: *Version 1:* Training Center, Governors Island, NY. *Version 2:* Training Center, Governors Island, NY. *Version 3:* Training Center, Governors Island, NY. *Version 4:* Training Center, Groton, CT.

Length: *Version 1:* 18–20 weeks (612 hours). *Version 2:* 12–14 weeks (497–540 hours). *Version 3:* 14 weeks (420 hours). *Version 4:* 21 weeks (777 hours).

Exhibit Dates: *Version 1:* 7/79–Present. *Version 2:* 12/75–6/79. *Version 3:* 12/72–11/75. *Version 4:* 12/64–11/72.

Objectives: To train enlisted personnel to perform as telephone technicians.

Instruction: *Version 1:* Lectures and demonstrations on the Model 28 teletype, key telephone system, Northern Telcom Pulse 120, two intercom systems and associated equipment including switchboards, telephone receivers and transmitters. Topics include the installation, maintenance and repair of the above equipment including terminology and block diagrams of AM, FM, and SSB transmission with the functional description of each subsystem, cable testing using a migger, Wheatstone Bridge and Time Domain Reflectometer to locate faults, cable characteristics and splicing procedures and practical exercises on installing poles, cross arms and climbing procedures. *Version 2:* A qualitative study of telephony with descriptions of telephone sets and associated equipment including: switchboards, public address and intercom systems, teletypewriter and radio teletype to include their installation, maintenance and repair. *Version 3:* Lectures and practical exercises in model 28/KSR/ASR teletypes; telephone line construction; cable splicing; switchboards; intercommunication systems; theory of telephony, and radio teletype. *Version 4:* Lectures and practical exercises in telephone repair and maintenance procedures, including background instruction in mathematics, electric circuits, electronics (vacuum tubes), and telephony.

Credit Recommendation: *Version 1:* In the vocational certificate category, 6 semester hours in telecommunications systems (2/83). *Version 2:* In the vocational certificate category, 9 semester hours in telecommunication systems (8/78). *Version 3:* In the vocational certificate category, 9 semester hours in telecommunication systems (6/75). *Version 4:* In the vocational certificate category, 20 semester hours in electricity or electronics (3/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in electricity or electronics (3/74); in the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and additional credit in electrical laboratory on the basis of institutional evaluation (12/68).

CG-1715-0003

Telephone Technician, Class B

Course Number: None.

Location: Training Center, Groton, CT.

Length: 25 weeks (925 hours).

Exhibit Dates: 6/65–12/68.

Objectives: To train enlisted personnel to operate and maintain specific telephone systems.

Instruction: Lectures and practical exercises in the maintenance of specific telephone systems, including DC and AC circuits, vacuum tubes and transistors, electronic circuits, telephone and telegraph systems (baseband and carrier), microwave radio, and operation of specific telephone systems.

Credit Recommendation: In the vocational certificate category, 6 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in electricity and electronics, and credit in electrical laboratory on the basis of institutional evaluation (4/74); in the upper-division baccalaureate category, 2 semester hours in electricity (12/68).

CG-1715-0004

AN/FPN-38 TIMER SYNCHRONIZER

Course Number: None.

Location: Loran-C School, Groton, CT; Electronics Engineering Station, Wildwood, NJ.

Length: 6 weeks (165 hours).

Exhibit Dates: 7/62–12/68.

Objectives: To train personnel to operate and maintain a specific Loran system.

Instruction: Lectures and practical exercises in the operation and maintenance of the AN/FPN-38 Loran system, including components, circuitry, timing and divider action, and alignment procedures.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (4/74).

CG-1715-0005

AN/FPN-41 TIMER

Course Number: None.

Location: Loran-C School, Groton, CT.

Length: 4 weeks (173 hours).

Exhibit Dates: 7/62–12/68.

Objectives: To train enlisted personnel to operate and maintain AN/FPN-41 timers.

Instruction: Lectures and laboratories in timing and signal handling; basic servo loops, including envelope and phase timing; troubleshooting procedures; and detailed maintenance procedures.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (4/74).

CG-1715-0006

AN/SPN-29 RECEIVER

Course Number: None.

Location: Loran-C School, Groton, CT.

Length: 5 weeks (203 hours).

Exhibit Dates: 1/66–12/68.

Objectives: To train enlisted personnel to operate, maintain, and align AN/SPN-29 receivers.

Instruction: Lectures and laboratories in fundamentals of Loran-C and AN/SPN-29 receivers, and operation and maintenance procedures.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (4/74).

CG-1715-0007

LORAN A ENLISTED, CLASS C

Course Number: None.

Location: Training Center, Groton, CT.

Length: 4 weeks (141 hours).

Exhibit Dates: 8/66–12/68.

Objectives: To train technicians to perform maintenance on Loran transmitting stations.

Instruction: Lectures and practical exercises in Loran system maintenance, including Loran antennas and timer introduction; block diagram, voltage regulator, power supplies, oscillator, synchronizer control unit, frequency divider, time delay unit, radio receiver, electrical synchronizer and synchronizer indicator, oscilloscope, switchgear, transmitter and amplifier, and transmitting antenna coupler maintenance; watchstanding techniques; and Loran publications, reports, and forms.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (4/74).

CG-1715-0008

AN/SPN-30 RECEIVER

Course Number: None.

Location: Training Center, Groton, CT.

Length: 8 weeks (110 hours).

Exhibit Dates: 5/66–12/68.

Objectives: To train enlisted personnel to operate and maintain the Loran C and AN/SPN-30 receiver.

Instruction: Lectures and laboratories in Loran C and AN/SPN-30 receiver introduction; power supplies, servo loops, and automatic gain control loop; signal-handling section; alarm indication circuits; pulse rate and code group generators; and Loran indicator operation and maintenance techniques.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (4/74).

CG-1715-0009

AN/FPN-46 MONITOR/TIMER
(AN/FPN-46 Timer)

Course Number: None.

Location: Loran-C School, Groton, CT.

Length: 4-5 weeks (170 hours).

Exhibit Dates: 11/62–1/90.

Objectives: To train enlisted personnel to operate, maintain, and align the AN/FPN-46 timer.

Instruction: Lectures and laboratories in AN/FPN-46 timer (Loran C system) operation, maintenance, and alignment, including Loran C system review; timing and signal handling; basic servo loops, master control unit, envelope control unit and phase control unit chassis, frequency divider unit, multipulse unit, switched attenuator, detector unit, and oscilloscope control unit familiarization; and alignment, testing, and troubleshooting procedures.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (8/78).

CG-1715-0010

1. ELECTRONICS TECHNICIAN, CLASS A
   (Electronics Technician, A School)
2. ELECTRONICS TECHNICIAN, CLASS A
3. BASIC ELECTRONICS, CLASS A

Course Number: None.

Location: *Version 1:* Training Center, Governors Island, NY. *Version 2:* Training Center, Governors Island, NY. *Version 3:* Training Center, Groton, CT.

Length: *Version 1:* 17 weeks (512 hours). *Version 2:* 17 weeks (578 hours). *Version 3:* 24 weeks (888 hours).

Exhibit Dates: *Version 1:* 3/72–1/90. *Version 2:* 4/68–2/72. *Version 3:* 6/65–3/68.

Objectives: To train enlisted personnel to operate, maintain, and repair electronics equipment.

Instruction: *Version 1:* Lectures and practical exercises to include AC and DC circuit theory, vacuum tube and transistor electronics and communication principles and systems. *Version 2:* Lectures and practical exercises in electronic equipment circuit analysis, AC and DC circuits, transformers, power supplies, vacuum tubes, transistors, AM/FM/SSB transmitters and receivers, VHF/UHF systems, servo systems, radar, Loran, sonar, fathometers, and test equipment operation, maintenance, and repair. *Version 3:* Lectures and practical exercises in electronic equipment circuit analysis, AC and DC circuits, transformers, power supplies, vacuum tubes, transistors, AM/FM/SSB transmitters, VHF/UHF systems, servo systems, radar, Loran, sonar, fathometers, and test equipment operation, maintenance and repair with basic mathematics and physics and a more thorough coverage of electronic circuits.

Credit Recommendation: *Version 1:* In the vocational certificate category, 12 semester hours in electronic circuit theory (6/75); in the lower-division baccalaureate/associate degree category, 6 semester hours in electronic technology, 2 in electronic technology laboratory (6/75). *Version 2:* In the vocational certificate category, 15 semester hours in electricity or electronics (3/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in electricity or electronics (12/68); in the upper-division baccalaureate category, 2 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74). *Version 3:* In the vocational certificate category, 20 semester hours in electricity or electronics (3/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in electricity or electronics (12/68); in the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

CG-1715-0011

ELECTRONICS TECHNICIAN COMMUNICATIONS, CLASS A
(Basic Electronics, Class A)

Course Number: None.

Location: Training Center, Governor's Island, NY; Training Center, Groton, CT.

Length: 24 weeks (888–922 hours).

Exhibit Dates: 6/65–12/68.

Objectives: To train enlisted personnel to operate, repair, and maintain electronic communications equipment.

Instruction: Lectures and practical exercises in electronic communications equipment circuit and systems analysis, including AC and DC circuits, transformers, power supplies, vacuum tubes, transistors, test equipment, electronics circuits, transmitters and receivers, VHF and UHF systems, servo systems, digital circuits, teletype, radio beacon, antennas and transmission lines, and computer mathematics. Basic Electronics, Class A course includes basic mathematics and physics, more electronic circuit theory, and less study of equipment.

Credit Recommendation: In the vocational certificate category, 20 semester hours in electricity or electronics (3/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in electricity or electronics (12/68); in the upper-division baccalaureate category, 3 semester hours in electricity or electronics, and credit in electrical laboratory on the basis of institutional evaluation (3/74).

CG-1715-0013

Ordnance Equipment, Class C

Course Number: None.
Location: Training Center, Groton, CT.
Length: 8 weeks (429 hours).
Exhibit Dates: 6/66-12/68.
Objectives: To upgrade knowledge and practical skills of fire control technicians and gunner's mates in specific Coast Guard ordnance, fire control, and antisubmarine warfare systems.
Instruction: Lectures and practical exercises in operation and maintenance of five-inch gun power drive, gun radar system, fire control systems, projectile hoists, loading systems, mounting systems, battery alignment, explosive demolition, 50 caliber machine gun, antisubmarine warfare devices, and 81mm mortar, and review of electricity and hydraulics.
Credit Recommendation: In the vocational certificate category, 2 semester hours in basic electricity, 2 in basic hydraulics (6/75).

CG-1715-0014

AN/AYN-2, AN/ASN-50 Flight
Director and Gyrocompass
Systems Class C

Course Number: None.
Location: Aircraft Repair and Supply Center, Elizabeth City, NC.
Length: 3 weeks (105 hours).
Exhibit Dates: 9/76-1/90.
Objectives: To train students to recognize, isolate, and correct malfunctions in AYN-2 Flight Director/ASN-50 Attitude Reference Systems, and to calibrate and perform preventive maintenance on the equipment.
Instruction: Course builds on previous electronics fundamentals training. Lectures and testing and laboratory work in the systems and specific test equipment, including a brief review of transistor and gyro fundamentals. Study beyond lecture/laboratory (73/29 hours) recommended but not required.
Credit Recommendation: In the vocational certificate category, 2 semester hours in avionics maintenance (9/77).

CG-1715-0015

Aids to Navigation Mechanician

Course Number: None.
Location: Training Center, Groton, CT.
Length: 6 weeks (212 hours).
Exhibit Dates: 7/65-12/68.
Objectives: To train enlisted personnel in the installation, maintenance, repair, and shop overhaul of aids-to-navigation equipment.
Instruction: Lectures and practical exercises in basic concepts and theory of electricity including AC and DC fundamentals, AC and DC motors and generators, batteries, minor aid lenses and lanterns, lamp chargers, radio beacons, timers, and fog signals.
Credit Recommendation: In the vocational certificate category, 3 semester hours in basic electricity, 3 in maritime trades (navigational aids repair) (6/75); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic electricity, 3 in maritime trades (navigational aids repair) (6/75).

CG-1715-0016

Fire Control Mk 56 System, Class C
(Fire Control Technician, Class C)
(Gun Fire Control Systems (GFCS) MK-52 and MK-56)

Course Number: None.
Location: Training Center, Governors Island, NY.
Length: *Version 1:* 14 weeks (548 hours). *Version 2:* 13 weeks (355-469 hours). *Version 3:* 16 weeks.
Exhibit Dates: *Version 1:* 12/80-Present. *Version 2:* 1/77-11/80. *Version 3:* 9/73-12/76.
Objectives: To train personnel to operate and maintain a gun fire control system.
Instruction: *Version 1:* The course has a heavy emphasis on troubleshooting techniques, utilized on the following: fixed and mixed trigger circuits, gate circuits, pulse and trigger circuits, receiver and AFC circuits, range error and sense circuits, and tracking and angle error circuits. The course also covers radar operation, train amplifiers, amplidyne generators, filter, coast and switch smoothing circuits. *Version 2:* Course covers fixed and mixed trigger circuits, gate circuits, pulse and trigger circuits, receiver and AFC circuits, range error and sense circuits, and tracking and angle error circuits. Also includes radar operation and troubleshooting, train amplifiers, amplidyne generators, filter, coast and switch smoothing circuits. *Version 3:* Lectures and practical exercises in the operation, maintenance, and repair of a military gun fire control system, including information on the radar transmitter and receiver system, power systems, and a brief overview of fire control computers.
Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in electronic circuit maintenance and troubleshooting (2/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in electrical laboratory (2/83). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in communications electronics (8/78). *Version 3:* In the vocational certificate category, 1 semester hour in basic communications laboratory (6/75).

CG-1715-0017

Radarman, Class A

Course Number: None.
Location: Radarman, Class A School, Governors Island, NY.
Length: 18 weeks (450-540 hours).
Exhibit Dates: 7/72-10/79.
Objectives: To train personnel in the operation of a radar system aboard a Coast Guard cutter.
Instruction: Lectures and practical exercises in the use of radar in plotting and echo interpretation, radar operation and equipment, and specific techniques relating to shipboard operation of radar systems. Some sections of course dealing with Naval operations and communications are classified.
Credit Recommendation: In the vocational certificate category, 1 semester hour in basic radar use and operation (6/75).

CG-1715-0018

Clarinet Pilgrim

Course Number: None.
Location: Training School, Governors Island, NY.
Length: 3 weeks (90 hours).
Exhibit Dates: 9/72-12/81.
Objectives: To train personnel in the operation and maintenance of specialized military communication equipment.
Instruction: Lectures and practical exercises in the theory, operation, maintenance, and troubleshooting of special military communication systems including JK flip flop, shift registers, ring counters, signal selectors, digital data receivers, and specialized equipment related to the military system.
Credit Recommendation: In the vocational certificate category, 2 semester hours in basic communications laboratory (6/75).

CG-1715-0019

1. Aviation Electronics Technician Class C AN/ARC-94
(AN/ARC-94 Class C and 490 T High Frequency (HF) Communications System and Antenna Coupler)
2. Avionics Equipment, Class C, AN/ARC-94

Course Number: None.
Location: Aircraft Repair and Supply School, Elizabeth City, NC.
Length: *Version 1:* 4-5 weeks (140-153 hours). *Version 2:* 3 weeks (98 hours).
Exhibit Dates: *Version 1:* 2/76-10/80. *Version 2:* 1/73-1/76.
Objectives: To train personnel in the operation, maintenance, and repair procedures of a high-frequency communication transceiver.
Instruction: *All Versions:* Lectures and practical exercises in the specific circuitry and modules associated with specific military communication equipment. *Version 2:* Includes 490 T HF communications systems and antenna coupler.
Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in basic communication laboratory (9/77). *Version 2:* In the vocational certificate category, 1 semester hour in basic communication laboratory (6/75).

CG-1715-0020

Avionics Equipment, Class C,
AN/ARN-79

Course Number: None.
Location: Aircraft Repair and Supply School, Elizabeth City, NC.
Length: 2 weeks (65 hours).
Exhibit Dates: 1/73-Present.
Objectives: To train personnel to operate, maintain, and repair a military electronic altimeter.
Instruction: Lectures and practical exercises in the specific modules used in a military altimeter along with specific test equipment used in maintenance and repair.
Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (6/75).

CG-1715-0021

Avionics Equipment, Class C,
AN/ARN-52(V)

Course Number: None.
Location: Aircraft Repair and Supply School, Elizabeth City, NC.
Length: 3 weeks (98 hours).
Exhibit Dates: 1/73-1/90.

Objectives: To provide personnel with background needed to operate, maintain and repair a specific navigation system.

Instruction: Lectures and practical exercises in the subsystems associated with a specific navigation system including block diagram analysis, IF amplifiers, RF amplifiers, and testing of components with special test equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic communication laboratory (6/75).

CG-1715-0022

Avionics Equipment, Class C,
AN/ARC-51A

Course Number: None.

Location: Aircraft Repair and Supply School, Elizabeth City, NC.

Length: 2 weeks (65-75 hours).

Exhibit Dates: 1/73-12/80.

Objectives: To train personnel to operate, maintain, and repair an ultra high frequency communication transceiver.

Instruction: Lectures and practical exercises in the basic modules used in a military communication transceiver using specific military test equipment.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (6/75).

CG-1715-0023

Loran Officers Indoctrination

Course Number: None.

Location: Training Center, Groton, CT.

Length: 3 weeks (106 hours).

Exhibit Dates: 7/66-12/68.

Objectives: To qualify personnel to perform supervisory duties and to operate and maintain Loran communication stations.

Instruction: Lectures and practical exercises in the operation of Loran transmitters and receivers.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic communication laboratory (6/75).

CG-1715-0024

Class C AN/AYN-1 Maintenance
(AN/AYN-1 Navigation Computer Systems Class C)

Course Number: None.

Location: Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 6-7 weeks (210-231 hours).

Exhibit Dates: 9/76-1/90.

Objectives: To provide specialized training in the theory and maintenance of the AN/AYN-1 navigational computer so that the graduate will be able to operate, troubleshoot, test and maintain the equipment.

Instruction: Students will obtain basic instruction in digital computer systems, including introduction to number systems, binary arithmetic, Boolean algebra, logic and machine language programming, and to train them to interpret outputs and troubleshoot the AYN-1 navigational computer system. Lectures and testing (170 hours) and laboratory (40 hours), with about 80 percent of the lecture and 25 percent of the laboratory work on general, real-time computing systems. Concentration is on block-diagram, signal-processing approach, including basic electronics circuits. Study beyond lecture/laboratory work suggested but not required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in digital computer fundamentals, 1 in avionics maintenance (9/77).

CG-1715-0025

AN/APN-195 Weather Radar Systems
Class C

Course Number: None.

Location: Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 3 weeks (105 hours).

Exhibit Dates: 9/76-1/90.

Objectives: Course is designed to teach theory, operation, and maintenance of special radar equipment used by this service agency.

Instruction: Instruction is on weather radar systems, with emphasis on basic theory, power distribution, and transmitting and receiving systems; instruction includes introduction to solid-state theory.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in specialized programs in meteorology and/or tower operation (9/77).

CG-1715-0026

AN/APN-171 Radar Altimeter System
Class C

Course Number: None.

Location: Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 2 weeks (70 hours).

Exhibit Dates: 9/76-1/90.

Objectives: To teach the fundamentals and theory of radar altimeters in order to improve maintenance and repair techniques.

Instruction: Course provides hands-on instruction to accomplish the above objectives.

Credit Recommendation: In the vocational certificate category, 1 semester hour in a specialized program in navigation and/or control tower operation (9/77).

CG-1715-0027

AN/APN-175 Doppler Radar,
Navigation

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC. Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 4 weeks (130-147 hours).

Exhibit Dates: 9/76-3/83.

Objectives: To train students to service AN/APN-175 Doppler radars.

Instruction: Course will give students an understanding of the Doppler principle in navigation and provide them with practical experience in the operation and troubleshooting of this navigation equipment.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (9/77).

CG-1715-0028

AN/APN-180 Loran A Navigation
System Class C

Course Number: None.

Location: Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 4 weeks (140 hours).

Exhibit Dates: 9/76-1/90.

Objectives: Course provides an understanding of the theory and operation of the AN/APN-180 Loran navigational system.

Instruction: Course covers the study of logic circuits, operational amplifiers and waveforms, and the analysis of timing and logic diagrams of the specific Loran navigational system. A review of transistors and integrator circuits is included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours as an elective in engineering technology (9/77).

CG-1715-0029

ARC-160 Communications System
(AN/ARC-160 Communications System)
(Class C Aviation Electronics Technician
AN/ARC-160)

Course Number: None.

Location: Aircraft Repair and Supply Center, Elizabeth City, NC.

Length: 3 weeks (93-125 hours).

Exhibit Dates: 12/76-1/90.

Objectives: To train students to troubleshoot, adjust, and maintain AN/ARC-160 VHF-FM radio receiver sets.

Instruction: Course builds on previous electronic training. Lecture and testing (76 hours) and laboratory (28 hours) provides review of the theory of logic circuits, number systems, and binary arithmetic, and presents current applications of conventional (CRO, VOR, signal generation and frequency countermeasures) and specialized test equipment for alignment and adjustment. Study beyond lecture/laboratory suggested but not required.

Credit Recommendation: In the vocational certificate category, 2 semester hours in avionics maintenance (9/77).

CG-1715-0030

AN/SPS-66 Maintenance and Repair,
Class A

Course Number: NAV12.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (70 hours).

Exhibit Dates: 4/78-1/90.

Objectives: To train entry-level technicians to perform the maintenance of the AN/SPS-66 radar set.

Instruction: Topics include set operation and fault indications; system block diagram and functional description of the set and its subassemblies; alignment procedures; isolation of malfunctions to faulty chassis components, wiring problems, or a faulty non-field repairable subassembly. More than 50 percent of time is spent in laboratory exercises on the system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/78).

CG-1715-0031

Aviation Electronics Technician,
Second Class, (AT2) by
Correspondence

Course Number: *Version 1:* 203-5. *Version 2:* 203-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 9/83-Present. *Version 2:* 10/77-8/83.

Objectives: To provide an overview of safety, administration, corrosion, and hardware in addition to basic electronics theory.

Instruction: *Version 1:* Training is provided in basic oscilloscope and octopus, solid state components, corrosion control, troubleshooting, safety, first aid, general aircraft hardware, publications, management, and administration. Students are required to successfully complete a proctored end-of-course examination. *Version 2:* This correspondence course contains the general safety precautions to be taken when working with mechanical and electrical equipment including basic first aid. Technical information presented includes aircraft corrosion and control, aircraft hardware, and basic electronics theory of amplifiers, oscillators, solid-state components and special circuits. This course presumes knowledge in mathematics, basic a/c and d/c electricity for successful completion. Course has proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in basic electronics and specialized corrosion control as related to electronic equipment (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in fundamentals of electronics (1/79).

CG-1715-0032

Aviation Electronics Technician,
First Class, by Correspondence

Course Number: 0103; 103-6; 103-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 3/84–8/86. *Version 2:* 6/77–2/84.

Objectives: To provide training in basic electronics and administration for the aviation electronics technician, first class.

Instruction: *Version 1:* Topics include fundamentals of microelectronics, binary logic, advanced binary logic, binary math, aircraft maintenance management systems, aircraft inspections, and aircraft maintenance records. Students are required to successfully complete a proctored final examination. *Version 2:* This correspondence course contains the basic theory and characteristics of synchros and their systems, transistors and their circuits, and the operation and construction of solid-state power supplies. Course further details aircraft management systems and offers a mathematics review. There is a proctored end-of-course examination. This course does not have any prerequisites, however, student must have a background in basic a/c and d/c electricity, algebra,and trigonometry.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in fundamental electronics (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in fundamentals of electricity. Recommendation is for theory knowledge only (1/79).

CG-1715-0033

Sonar Technician Second Class by
Correspondence

Course Number: 243-2; 243-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 5/84–11/87. *Version 2:* 8/75–4/84.

Objectives: Course presents responsibilities of a military technician in the operation and maintenance procedures of specific military equipment.

Instruction: *Version 1:* Course presents safety procedures, operating controls, antisubmarine warfare procedures and operator preventive maintenance for sonar equipment. The course also covers general principles of transducers/hydrophones and underwater acoustics. Coast Guard administrative procedures are also covered. Students are required to successfully complete a proctored end-of-course examination. *Version 2:* This correspondence course outlines the responsibilities of a sonar technician and studies operations for various tactical situations. Briefly reviews electronics, mathematics, transistors, amplifiers, logic circuits, and maintenance procedures in specific military equipment. There is a brief introduction to synchros, servos and resolvers. A proctored end-of-course examination is required.

Credit Recommendation: *Version 1:* Credit is not recommended due to the military-specific nature of the course (12/87). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electronics theory (1/79).

CG-1715-0034

Sonar Technician First Class by
Correspondence

Course Number: *Version 1:* 143-2. *Version 2:* 143-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 2/81–Present. *Version 2:* 10/73–1/81.

Objectives: To provide experienced sonar technicians with supervisory training required for advancement to first class technician status.

Instruction: *Version 1:* Course provides training in the supervision of sonar operators, antisubmarine warfare organization and operations, sonar contact classification, evasive devices and casualty procedures, MK torpedo systems and sonar domes and transducers. Students are required to successfully complete a proctored end-of-course exam. *Version 2:* This correspondence course covers operating procedures and definitions of terms for specific military equipment. The introduction to semiconductor devices includes the zener diode, SCR, and junction transistors. Methods of biasing, circuit configurations, and the operation of amplifiers are covered. Characteristics of the unijunction and field-effect transistor along with circuits operations applications are presented. Introduction to pulse and switching circuits, IC's, methods of handling and testing FET's and IC's, and printed circuits are covered. This course includes a proctored end-of-course examination.

Credit Recommendation: *Version 1:* Credit is not recommended due to the military-specific nature of the course (5/85). *Version 2:* In the vocational certificate category, 2 semester hours in electronics theory (1/79).

CG-1715-0035

Fire Control Technician Second Class
by Correspondence

Course Number: *Version 1:* W227. *Version 2:* 227-7; 227-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 6/83–9/86. *Version 2:* 10/74–5/83.

Objectives: To provide training in the operation, troubleshooting and maintenance of specific fire control systems, problems and procedures.

Instruction: *Version 1:* Course covers safety precautions, ordnance safety, maintenance, troubleshooting and repair of gun fire control systems MK56 Mod 43 and MK92 Mod 1. Also included are sound powered telephones, administration and ballistics.There is a proctored final examination. *Version 2:* Course provides an explanation of ordnance administration, electrical distribution symbols, fire control problems, procedures for mechanical alignment, and maintenance of specialized military equipment.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in electrical system maintenance and repair (5/85). *Version 2:* Credit is not recommended because of military-specific nature of the course (5/81).

CG-1715-0036

Fire Control Technician First Class
by Correspondence

Course Number: 127-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 8/75–9/86.

Objectives: To present solid-state devices and testing procedures, servo systems, gyro devices, antenna principles, and microwave components as they pertain to fire control radar and basic analog and digital computers.

Instruction: This is a correspondence course that does not require a formal laboratory. Course covers theory and testing procedures on solid-state components, generating and shaping circuits and basic digital systems. Operating characteristics of analog and digital computers including electrical, electronic, mechanical, and electromechanical computing devices are covered. Open and close 100p servosystems, gyros, antenna principles, and microwave components are also studied. Course includes a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronics theory, 1 in electromechanical theory (1/79).

CG-1715-0037

Electronics Technician Second Class
by Correspondence

(Electronic Technician Second Class by
Correspondence)

Course Number: 221-6; 221-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 10/77–Present.

Objectives: To teach fundamentals of electronics.

Instruction: Course includes topics in the general operation of solid state diodes, transistors, unifunction transistors, field effect transistors, silicon controlled rectifiers, and special semiconductor devices. An introduction to computer systems includes number systems, Boolean algebra, logic gates, counters, registers, decoders and adders. The basic theory of operation of an oscilloscope and the interpretation of cathode ray tube oscillograms are presented. The study of cable installation and termination includes cable routing and securing coaxial cable, military specification connectors and connector soldering procedures. Students may supplement course study with hands-on training on the job. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to electronics theory (5/85).

CG-1715-0038

Electronics Technician First Class (ET1) by Correspondence

(Electronic Technician First Class by Correspondence)

Course Number: *Version 1:* 121-6; 121-7. *Version 2:* 121-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 10/81-Present. *Version 2:* 2/77-9/81.

Objectives: To present the theory of electromagnetic interference effects, digital electronics, digital troubleshooting techniques and the Coast Guard paperwork system.

Instruction: *Version 1:* Course includes electromagnetic interference as related to radio and radar receivers and transmitters; digital logic elements such as gates, flipflops, registers, counters, adders, and decoders; digital troubleshooting methods; and Coast Guard formats for memoranda, messages and letters. Students are required to successfully complete a proctored end-of-course examination. Students may supplement course study with hands-on experience on the job. *Version 2:* This correspondence course teaches the theory of operation of vacuum tubes and transistors and their applications in audio and RF amplifiers, oscillators and wave shaping circuits. A study of these methods of coupling and of frequency compensation for amplifiers, DC amplifiers, phase inverters, sawtooth generators, blocking oscillators, limiting circuits, multivibrators, clamping circuits. Differentiating and integrating circuits and delay lines and covered. An introduction to the terms and sources of electromagnetic interference ; methods and circuits for suppressing interference in radio and radar equipment are given. The theory of operation and use of various electronics test equipment including VTVM's transistorized voltmeters, digital voltmeters, differential voltmeters, phase-angle meters, bridge measurement instruments frequency meters, curve tracers, oscilloscopes, and probes are covered. Course contains a study of solid-state power supplies including DC-to-DC convertors, series and shunt voltage regulators, constant-current, and current-limited regulators. Also presented are theories of operation of AM, SSB, and FM communications systems; a study of modulation techniques; an introduction to trouble shooting charts to repair transmitters and receivers and to permit the student to gain familiarity with procedures for the alignment of FM receivers. No formal laboratory experience is required. There is a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in digital logic (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 4 semester hours in electronics theory (1/79).

CG-1715-0039

HH-3F Avionicsman by Correspondence

Course Number: 442-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 4/76-12/86.

Objectives: To provide standardized speciality training on the HH-3F helicopter.

Instruction: This correspondence course is designed to enable the student to explain flight preparation, inflight, and postflight duties; describe standardized search and rescue procedures; explain the operation of the mechanical, communication, and navigational systems; and describe the electronics flight aids.

Credit Recommendation: Credit is not recommended due to the limited nature of the training (1/79).

CG-1715-0040

HC-130 Avionicsman by Correspondence

Course Number: 444-3; 444-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 10/84-12/86. *Version 2:* 9/77-9/84.

Objectives: To provide a standard special introduction of the avionics systems to an avionicsman training candidate.

Instruction: *Version 1:* Course includes the mechanical area: familiarization with powerplants and propellers, ground handling and servicing, hydraulic powered flight controls and landing gear system, brake and fuel systems. In the avionic area: general communications to include null field static discharge wicks, intercommunication, PA systems, VHF and UHF communication systems and teletypewriter. Students are required to successfully complete a proctored final exam. *Version 2:* This correspondence course includes descriptions of the mechanical, communications, navigational, and electronic flight aids systems that pertain to HC-130 aircraft.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in aircraft systems and ground handling, 1 in operation of communications, navigation and electronic flight aids (12/86). *Version 2:* Credit is not recommended because of the military-specific nature of the course (1/79).

CG-1715-0041

Automated Aids Electronics Maintenance Class C

(Automated Aids to Navigation Electronics Maintenance)

Course Number: ANC-6.

Location: Training Center, Governors Island, NY.

Length: 5 weeks (130-200 hours).

Exhibit Dates: *Version 1:* 7/81-12/85. *Version 2:* 3/77-6/81.

Objectives: To provide practical training in the maintenance of the lighthouse automation and modernization program (LAMP) monitor and control equipment.

Instruction: *Version 1:* Lectures and laboratory exercises in the operation and theory of automatic monitor equipment, including power supplies radar beacon systems and buoy lighting systems. The emphasis is on learning to maintain, troubleshoot and repair automated aids, to the board or component level, using applicable technical manuals. *Version 2:* The course prepares technicians to operate, maintain, troubleshoot, and repair various subsystems of the automated lighthouse system. Topics include electronics logic, controls, radio links, and power generation.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in electronic systems laboratory (2/83).There is a proctored final examination required. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in automated electrical systems (8/78).

CG-1715-0042

Basic Minor Aids To Navigation

(Basic Minor Aids to Navigation Maintenance Class C)

Course Number: ANC-3.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (57-80 hours).

Exhibit Dates: 9/74-12/84.

Objectives: To provide practical training in the maintenance of 12-volt DC minor-aid systems.

Instruction: Students are instructed in the use of DC electrical meters and familiarized with various lamps which they assemble, adjust, and troubleshoot.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (2/83).

CG-1715-0043

Common Basic Electronics Training (COBET)

(Electronics Fundamentals)

(Basic Electronics)

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: *Version 1:* 14 weeks (420 hours). *Version 2:* 12 weeks (476 hours).

Exhibit Dates: *Version 1:* 9/77-1/90. *Version 2:* 12/72-8/77.

Objectives: To teach the basics of electronics maintenance, troubleshooting, and repair fundamentals to personnel with no prior background, in preparation for more specialized courses.

Instruction: *Version 1:* A qualitative series of subcourses stressing language component identification, functional description of equipment, and minor troubleshooting procedures of components. Topics covered include power supplies, amplifiers, generators, logic circuits, and single sideband and FM principles. *Version 2:* A qualitative series of modules stressing electronic definitions, component identification, functional descriptions, test equipment usage (oscilloscopes, tone generators, multimeters, and RF wattmeters), description of transistors, rectifiers, vacuum tubes, capacitors and inductors, block diagram descriptions of transistors and receivers, troubleshooting and repair procedures.

Credit Recommendation: *Version 1:* In the vocational certificate category, 10 semester hours in electronic maintenance (8/78); in the lower-division baccalaureate/associate degree category, 3 semester hours in survey of electronics (8/78). *Version 2:* In the vocational certificate category, 6 semester hours in basic electronic fundamentals (2/83).

CG-1715-0044

Radar Fundamentals

Course Number: NAV11.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (50 hours).

Exhibit Dates: 4/78–1/90.

Objectives: To train technicians in basic radar theory in preparation for further training on specific radar systems.

Instruction: Primarily a course on radar principles, devices and test equipment; course includes power and frequency checks, timing and synchronization, and block diagrams. Some laboratory experience is included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radar fundamentals (9/78).

CG-1715-0045

AN/SRC-21 Radio Set

Course Number: COMO5.

Location: Training Center, Governors Island, NY.

Length: 3 weeks (81 hours).

Exhibit Dates: 3/77–1/90.

Objectives: To train electronics technicians to perform preventive maintenance and repair on the AN/SRC-21 radio set in accordance with its technical manual.

Instruction: Topics covered include system capabilities and description; functional description of system subassemblies; maintenance and alignment procedures; troubleshooting procedures. Over 50 percent of the time is spent in laboratory exercises on the system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (8/78).

CG-1715-0046

Advanced Minor Aids to Navigation Maintenance

(Advanced Minor Aids to Navigation, Class C)

Course Number: ANC-2.

Location: Training Center, Governors Island, NY.

Length: *Version 1:* 6 weeks (229 hours). *Version 2:* 5 weeks (142 hours).

Exhibit Dates: *Version 1:* 8/81–2/88. *Version 2:* 4/73–7/81.

Objectives: To train enlisted personnel in the maintenance of minor navigational aid systems, piloting, and minor-aid construction.

Instruction: Instruction is given in operation, troubleshooting, and maintenance of minor aids, beacons, buoys, and sound signals; bouy tender operations encompassing bouy deck procedures, bouy positioning techniques, piloting and safety; and minor-aid construction. After 3/88, see CG-1715-0131.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in basic electricity (2/83); in the lower-division baccalaureate/associate degree category, 1 semester hour in basic seamanship or 1 in basic navigation (2/83). *Version 2:* In the vocational certificate category, 2 semester hours in basic electricity, 2 in maritime trades (navigation) (8/78).

CG-1715-0047

Communications Systems, Class C

Course Number: COMO6.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (70 hours).

Exhibit Dates: 3/77–1/90.

Objectives: To train electronics technicians to operate, maintain, and repair a radio teletype communications system.

Instruction: Course content includes lectures and laboratory exercises (approximately 50 percent) on the operation and maintenance of the teletype, patch panels, teletype control, teletype converter, radio and MF transmitter. Failure diagnosis and repair procedures are also included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radio teletype communications or electromechanical technology (8/78).

CG-1715-0048

CDFO-5000, Class C

Course Number: LOR-13.

Location: Training Center, Governors Island, NY.

Length: 3 weeks (115–120 hours).

Exhibit Dates: 9/77–1/90.

Objectives: To train electronics technicians to perform preventive and corrective maintenance on the CDFO-5000 Loran system in accordance with a designated set of manuals.

Instruction: Training will consist of lectures on the equipment components and functions, practical exercises in operation, alignment and adjustment of the system. The student will troubleshoot instructorinserted faults according to manuals.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/78).

CG-1715-0049

AN/SPS-29D Radar Systems Class C

(AN/SPS-29 Maintenance and Repair, Class C)

Course Number: NAV05.

Location: Training Center, Governors Island, NY.

Length: 3 weeks (109–111 hours).

Exhibit Dates: *Version 1:* 8/81–Present. *Version 2:* 7/78–7/81.

Objectives: To train electronics technicians in the maintenance and repair of a specific air-search radar system in accordance with its technical manuals.

Instruction: *Version 1:* Lectures on equipment components and their function and practical exercises in the operation, alignment and troubleshooting of equipment with instructor inserted faults. Electronics theory is offered on an "as needed" basis. *Version 2:* Course topics include review of radar fundamentals, functional description of the overall system, the pulse generator, modulator, exciter, driver, power amplifier, duplexer, receiver, ranging, monitoring, power supplies, liquid cooler, and compressor dehydrator function. The antenna system is also covered. Testing and troubleshooting procedures using the oscilloscope are emphasized. Over 50 percent of the time is devoted to laboratory work on the system.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in radar service and maintenance (2/83). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in radar systems (9/78).

CG-1715-0050

Class C Mark 10/IFF Maintenance and Repair

Course Number: NAV06.

Location: Training Center, Governors Island, NY.

Length: 3 weeks (105 hours).

Exhibit Dates: 7/78–1/90.

Objectives: To train electronics technicians in the maintenance and repair of a shipboard identification-friend-or-foe (IFF) system in accordance with its technical manuals.

Instruction: Topics covered include IFF principles, a functional description of the system and its subassemblies, and the use of radar test sets and the oscilloscope in aligning and troubleshooting the system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications electronics (9/78).

CG-1715-0051

AN/SPS-64(V) -1,2,3,4 Radar

Course Number: NAV09.

Location: Training Center, Governors Island, NY.

Length: 4 weeks (135 hours).

Exhibit Dates: 7/78–1/90.

Objectives: To train electronics technicians to maintain and repair a surface-search navigational radar system.

Instruction: Topics covered include a review of basic radar principles and digital logic, system configuration, operator controls, and a functional description of the modulator-receiver-transmitter, antenna, and azimuth range indicator subsystems. Data converters, interface units, and the antenna servomechanisms are also covered. Testing and troubleshooting of the system is stressed. Over 50 percent of allocated time is spent in laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications systems (9/78).

CG-1715-0052

AN/URC-77 Maintenance and Repair

Course Number: COMO1.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (72 hours).

Exhibit Dates: 7/78–1/90.

Objectives: To train technicians to perform preventive and operational maintenance on a representative transceiver in accordance with its manual.

Instruction: When taken in conjunction with AN/SRC-42(V) Radio Set, this course presents a qualitative coverage of radiotelephone procedures, SSB/AM theory, receiver and transmitter specifications, block diagrams and circuits. Signal tracing, testing tuning, and troubleshooting of both the receiver and transmitter of a representative AM/SSB radio set are included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, when taken in conjunction with AN/SRC-42(V) Radio Set (see CG-1715-0053), 2 semester hours in communications equipment servicing (9/78).

CG-1715-0053

AN/SRC-42(V) Radio Set

Course Number: COMO1.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (72 hours).

Exhibit Dates: 7/78–1/90.

Objectives: To train technicians to perform preventive maintenance and repair on a representative AM/SSB radio set according to its manual.

Instruction: When taken in conjunction with AN/URC-77 Maintenance and Repair, this course presents a qualitative coverage of radiotelephone procedures, SSB/AM theory, receiver and transmitter specifications, block diagrams, and circuits. Signal tracing, testing, tuning and troubleshooting of both the receiver and transmitter of a representative AM/SSB radio set are included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, when taken in conjunction with AN/URC-77 Maintenance and Repair, 2 semester hours in communications equipment servicing (9/78).

CG-1715-0054

AN/SPS-57 MAINTENANCE AND REPAIR, CLASS A

Course Number: NAV02.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (65 hours).

Exhibit Dates: 3/78-1/90.

Objectives: To train electronics technicians to perform preventive and operational maintenance on the AN/SPS-57 radar set based on the technical manual.

Instruction: Topics include functional description of the system and its subunits including its capabilities and specifications, alignment procedures; fault isolation (on a faulty nonfield repairable subassembly) using a multimeter oscilloscope and the manual. More than 50 percent of the time is spent on laboratory exercises on the system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/78).

CG-1715-0055

AN/UPN-23 LORAN A RECEIVER, CLASS A

Course Number: NAV03.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (56 hours).

Exhibit Dates: 3/78-1/90.

Objectives: To train electronics technicians to operate and troubleshoot the AN/UPN-23 Loran-A receiver in accordance with its technical manual.

Instruction: Topics covered include basic Loran-A theory; functional description of the AN/UPN-23; operation, alignment, and troubleshooting procedures for the AN/UPN-23 More than 50 percent of time is spent in laboratory exercises on the system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/78).

CG-1715-0056

FATHOMETERS

Course Number: NAV04.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (70 hours).

Exhibit Dates: 7/78-1/90.

Objectives: To train entry-level electronic technicians to perform the preventive maintenance and repair of fathometers AN/SQN-13, AN/UQN-1H, and AN/UQN-4 in accordance with their technical manuals.

Instruction: Topics covered include basic principles of sonar; specifications, capabilities, and functional description of each of the cited fathometers; alignment of a fathometer; isolation of equipment malfunctions using appropriate test equipment and the technical manual. More than 50 percent of the time is spent in laboratory exercises on the system.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (9/78).

CG-1715-0057

CCI-611 AND MOTOROLA TRITON VHF-FM TRANSCEIVERS

Course Number: COMO2.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (70 hours).

Exhibit Dates: 3/78-1/90.

Objectives: To train technicians to perform preventive maintenance and repair on the CCI-611 and Motorola Triton VHF-FM transceiver.

Instruction: Course provides a qualitative coverage of the basic FM transceiver, its block diagram, and a functional description of its subassemblies. Practical troubleshooting methods, component repair, alignment and preventive maintenance procedures are stressed.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communications equipment servicing (9/78).

CG-1715-0058

AN/URT-23 AND AN/URA-38
(AN/URT-23 Radio Transmitting Set and AN/URA-38 Antenna Coupler Group)

Course Number: COMO1.

Location: Training Center, Governors Island, NY.

Length: 3 weeks (75 hours).

Exhibit Dates: 3/78-1/90.

Objectives: To train electronics technicians in the maintenance and repair of the AN/URT-23 and AN/URA-38 transmitter/antenna system based on the manuals for this system.

Instruction: Topics covered include: nomenclature and functional description of all components of the transmitter and antenna servo system; system operation, block diagram and signal flow; testing alignment procedures; troubleshooting and repair procedures. Approximately 50 percent of instructional time is spent in laboratory work on the system.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (8/78).

CG-1715-0059

LORAN-C JOURNEYMAN

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 4-5 weeks (160 hours).

Exhibit Dates: 1/76-1/90.

Objectives: To prepare electronic technicians in the principles of operation of Loran equipment with specific emphasis on maintenance, repair, and operation of the AN/FPN 39,42, and 44.

Instruction: Course is a combination course consisting of LORO 5, 6, and 7: Loran-C System, Loran Replacement Equipment, and Apprentice FPN-39 or FPN 44/45 Transmitter. Instruction emphasizes operation and maintenance, trouble identification, and preventive maintenance of specialized equipment.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (8/78).

CG-1715-0060

LORAN-A APPRENTICE, CLASS A

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 8 weeks (276 hours).

Exhibit Dates: 6/76-1/90.

Objectives: To instruct technicians in the principles of operation of Loran-A systems and to train them in the preventive and corrective maintenance of Loran-A timing, transmitting, and replacement equipment.

Instruction: Course is a combination of Coast Guard courses numbered LORO1, LORO2, LORO3, and LORO4 entitled Loran-A Systems; FPN-30 Timer; Transmitters, Amplifiers and Switching Equipment; and Loran-A Replacement Equipment (LARE). Course offers principles of operation operation of each unit and their integration into the Loran-A system. Students are taught to troubleshoot system malfunctions and to repair or replace defective circuit boards or components as well as to perform preventive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in communications equipment servicing (8/78).

CG-1715-0061

FUNDAMENTALS OF ELECTRONICS BY CORRESPONDENCE

Course Number: 472-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 8/78-9/82.

Objectives: To provide a basic coverage of mathematics and electrical circuit theory from which the student is able to progress into a limited study of semiconductor devices and fundamental electronic circuits.

Instruction: This correspondence course presents basic mathematics from addition and subtraction to algebra and elementary trigonometry. AC and DC circuits are covered to a limited degree from Ohm's Law to polyphase circuits and transformers. Basic electronic circuits such as rectifiers, transistor amplifiers, oscillators, and wave shapers are presented to a limited degree. No formal laboratory experience is required. Course has a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronics theory (1/79).

CG-1715-0062

JUNIOR OFFICER ELECTRONIC INDOCTRINATION BY CORRESPONDENCE

Course Number: 405-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 12/73-6/80.

Objectives: To train the junior officer in the duties of an electronic material officer.

Instruction: This correspondence course provides a brief introduction to wave propagation, electronic aids to navigation, and an introduction to electronic administration for a shipboard electronic department.

Credit Recommendation: Credit is not recommended due to the military-specific nature of the course (1/79).

CG-1715-0063

TELEPHONE TECHNICIAN SECOND CLASS (TT2) BY CORRESPONDENCE

Course Number: *Version 1:* 245-6. *Version 2:* 245-4.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 12/81–Present. *Version 2:* 5/78–11/81.

Objectives: To teach telephone technicians to install, operate and repair communications and terminal equipment.

Instruction: *Version 1:* Course contains volumes 2 and 6 of "Lee's ABC of the Telephone" covering station wiring, station carrier equipment, signaling, power requirements, noise, installation and maintenance, and troubleshooting. Additional topics include Model 28 and Model 40 teletypes, oscilloscopes, as well as cable installation and termination. Students are required to successfully complete a proctored end-of-course examination. Students may supplement course study with hands-on experience on the job. *Version 2:* This correspondence course offers an introduction to the basic principles of step-by-step, cross bar, and electronic switching systems. Student will become familiar with procedures for the installation and repair of telephone cables, inside and outside equipment, carrier equipment, public address and intercom systems, and teletypewriters. Course includes a proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the vocational certificate category, 3 semester hours in telephone and teletype theory and installation (5/85). *Version 2:* In the vocational certificate category, 3 semester hours in telephony theory (1/79).

CG-1715-0064

CLOSED CIRCUIT TELEVISION SYSTEMS BY CORRESPONDENCE

Course Number: 408-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 1/76–6/80.

Objectives: To teach the operation, maintenance and repair of closed circuit television units including monitor/receivers, cameras, and video recorders.

Instruction: This correspondence course presents an introduction to the theory of operation and maintenance of television equipment. Course includes basic fundamentals of the television camera and video recorder, a study of television standards, the composite video signal, and the transmitter and receiver circuits. Student will observe malfunctions using picture tube indications and analyze problems to specific components by use of a television schematic. Course has a proctored end-of-course examination; no formal laboratory experiences are required.

Credit Recommendation: In the vocational certificate category, 2 semester hours in radio/television theory (1/79).

CG-1715-0065

RADAR THEORY AND MAINTENANCE BY CORRESPONDENCE

Course Number: 473-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 4/77–5/79.

Objectives: To provide introduction to the principles of microwave techniques.

Instruction: This correspondence course presents the principles of microwave propagation and antennas, waveguides, cavity resonators, velocity-modulated tubes, magnetrons and traveling wave tubes. Course also includes an introduction to radar circuits, duplexers, TR and ATR tubes, ferrites, echo boxes, directional couplers and the measurement of power and standing-wave ratios. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronics (1/79).

CG-1715-0066

ADVANCED ELECTRICAL/ELECTRONICS (Advanced Electrical Electronics)

Course Number: EM-17.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 14 weeks (482 hours). *Version 2:* 12 weeks (420 hours).

Exhibit Dates: *Version 1:* 2/81–1/87. *Version 2:* 3/78–1/81.

Objectives: To train qualified enlisted electrician's mates in the theory, analysis, and repair of solid state electrical/electronic shipboard control systems.

Instruction: Lectures and practical exercises in integrated circuit operational amplifiers, magnetic amplifiers and uses of modern electronic test instruments. Review of mathematics, beginning algebra, and theory of AC and DC electrical circuits.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in technical math, 3 in logic devices and control modules, 4 in solid state amplifiers and control circuits and 2 in introduction to electricity and electronics (7/84). *Version 2:* In the vocational certificate category, 1 semester hour in basic mathematics (12/79); in the lower-division baccalaureate/associate degree category, 4 semester hours in solid state amplifier and control circuits, 3 in logic devices and control modules, 2 in introduction to AC and DC electricity (12/79).

CG-1715-0067

RESERVE RADIOMAN CLASS C

Course Number: None.

Location: Training Center, Petaluma, CA.

Length: 2 weeks (79 hours).

Exhibit Dates: 1/80–1/90.

Objectives: To improve the skill level of reserve radiomen to operate a telecommunications station.

Instruction: Lectures and practical exercises to update radiomen in the operation of field receivers and transmitters, Morse Code, teletype operations, improved typing practice, and basic communications and message traffic handling.

Credit Recommendation: Credit is not recommended because of the refresher nature of the course (8/80).

CG-1715-0068

TEMPEST MODEL 40 TELETYPE, CLASS C

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 3 weeks (100 hours).

Exhibit Dates: 3/81–Present.

Objectives: To provide telephone and electronics technicians with the necessary training to install, maintain and overhaul the Tempest model 40 teletype data terminal.

Instruction: Lectures and laboratory exercises at the functional level on the electromechancial operation of the video display monitor, printer, controller logic and power supply of the Tempest data terminal. The main emphasis of the course is on the installation, maintenance and repair to the defective card, module or mechanical component level.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electromechanical laboratory (2/83).

CG-1715-0069

AN/SPS-51 RADAR, CLASS C

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 6 weeks (200 hours).

Exhibit Dates: 3/77–10/77.

Objectives: To provide training for experienced electronic technicians in the maintenance and repair of a specialized radar system.

Instruction: Lectures and practical exercises on equipment components and functions, including operation, alignment and troubleshooting. Electronic theory and servosystem operation is offered on an "as needed" basis.

Credit Recommendation: In the vocational certificate category, 1 semester hour in radar repair technology (2/83).

CG-1715-0070

AN/SPS-64(V)4 RADAR

Course Number: NAV14.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 2 weeks (71 hours).

Exhibit Dates: 5/81–Present.

Objectives: To train electronics technicians in the maintenance and repair of a specialized radar system.

Instruction: Lectures and discussions on equipment components and functions including practical experience in the operation, alignment and troubleshooting of instructor inserted faults. Electronics theory is offered on an as needed basis.

Credit Recommendation: In the vocational certificate category, 1 semester hour in radar servicing and maintenance (2/83).

CG-1715-0071

ELECTRONICS TECHNICIAN A SCHOOL, GENERAL TRACK

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 16 weeks (420 hours).

Exhibit Dates: 1/73–8/77.

Objectives: To train electronic technicians in the practical maintenance and repair of communications and navigational equipment used by the Coast Guard.

Instruction: Lectures and practical exercises in the principles of operation, systems functions, malfunction identification and isolation, repair, and calibration of five basic types of equipment, namely, single sideband equipment, frequency modulated equipment, surface search radar equipment, LORAN-A receiver equipment and sonar sounding equipment.

Credit Recommendation: In the vocational certificate category, 8 semester hours in troubleshooting laboratory (2/83).

CG-1715-0072

COL-URG-II HF TRANSMITTING SYSTEM (COL-URG-II High Frequency Transmitting System)

Course Number: COM 12.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 2 weeks (71 hours).

Exhibit Dates: 1/81–Present.

Objectives: To train experienced electronic technicians to operate and perform preventive and corrective maintenance on a specific transmitter and its associated control equipment.

Instruction: Lectures and practical exercises in the make-up and operation of a specific computerized transmitter including the use of diagnostic test equipment and programs, fault isolation and repair to the component level.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (2/83).

CG-1715-0073

LORAN-C

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 15 weeks (450 hours).

Exhibit Dates: 1/79–9/81.

Objectives: To train electronic technicians in the operation, troubleshooting and repair of the Loran Navigation System.

Instruction: Lectures and practical exercises in the operation, troubleshooting and repair of the Loran-C navigation system including electrical schematic and block diagram analysis to assist in locating faults to the component level in the Loran-C timing equipment, control equipment, low and high powered vacuum tube transmitter, radio transmitter and receiver, and high frequency receivers.

Credit Recommendation: In the vocational certificate category, 5 semester hours in marine electronic navigation systems (2/83).

CG-1715-0074

RADAR OPERATOR (RADOP) BY CORRESPONDENCE

Course Number: 432-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 9/79–Present.

Objectives: To teach the principles of radar systems, navigation and piloting.

Instruction: Course introduces the principles of radar including carrier frequency, pulse width, time-range relationship, antenna systems, repeaters, scope interpretation identification equipment, navigation and radar piloting. Student may supplement course study with hands-on experience on the job. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in radar operation (5/85).

CG-1715-0075

RADIOMAN FIRST CLASS (RM1) BY CORRESPONDENCE

Course Number: 141-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 7/80–8/86.

Objectives: To provide training in security of classified information, teletype and communication equipment and wave propagation.

Instruction: Course covers administration, handling, storage and transmission of classified information and publications, teletype and radio communication equipment, radio wave propagation and antennas. Students are required to successfully complete a proctored end-of course examination. Students may supplement course study with hands-on experience on the job.

Credit Recommendation: In the vocational certificate category, 2 semester hours in introduction to electronic communications (5/85).

CG-1715-0076

BASIC RADAR USE AND OPERATION (BARAD) BY CORRESPONDENCE

Course Number: 651-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/83–Present.

Objectives: To provide training in the basic use and operation of radar.

Instruction: Course includes the history of radar development, the legalities of radar use, radar fundamentals, radar propagation, AN/SPS-64 and -66 radar operation, factors affecting detection and determination of position of contacts, radar navigation and ice detection. Also included are manuevering board problems involving relative motion, course, speed, collision, station taking, contact interception, true wind, relative wind, desired wind, and direct plotting procedures. Students may supplement course study with hands-on training on the job. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in introduction to radar systems operation (5/85).

CG-1715-0077

TELEPHONE TECHNICIAN FIRST CLASS (TT1) BY CORRESPONDENCE

Course Number: 145-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 10/81–5/86.

Objectives: To prepare students to be telephone technicians.

Instruction: Course covers splicing of submarine telephone and power cables; troubleshooting techniques and equipment for telephone cable; troubleshooting and construction techniques for power lines, transformer load balancing; powerline safety procedures, residential service drops and wiring; theory of cable construction; operation and function of data communication equipment, data communication codes; use of Coast Guard directives, letters, messages, and memoranda. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in residential wiring, 1 in telephone line maintenance, and 1 in power distribution systems (5/85).

CG-1715-0078

AVIATION ELECTRONICS TECHNICIAN AN/ARC-160 CLASS C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 2 weeks (71 hours).

Exhibit Dates: 6/85–Present.

Objectives: Provides specialized training in maintenance of VHF-FM transceivers.

Instruction: Practical training in the use of special test equipment, minimum performance testing, and troubleshooting to the module and chassis-mounted component level of the AN/ARC-160 (VHF-FM transceiver).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communication repair (6/85).

CG-1715-0079

AVIATION ELECTRONICS TECHNICIAN 618M-3 CLASS C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 3 weeks (109 hours).

Exhibit Dates: 6/83–Present.

Objectives: To provide specialized training in the maintenance of the 618M-3 VHF AM transceiver.

Instruction: Practical training in the use of the special test equipment, minimum performance testing, and troubleshooting of the 618M-3 UHF AM transceiver.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic communication repair (6/85).

CG-1715-0080

AVIATION ELECTRONICS TECHNICIAN AN/APS-127

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 4 weeks (148 hours).

Exhibit Dates: 2/85–Present.

Objectives: To provide specialized training in the theory and maintenance of the AN/APS-127 Radar System.

Instruction: Lectures and demonstrations on the electronic theory and operation of the equipment's units and modules, and practical training in the use of special test equipment, minimum performance testing, alignment, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in AN/APS-127 radar system maintenance, 2 in radar system maintenance, 2 in radar theory (6/85).

CG-1715-0081

DIGITAL MICROPROCESSOR CLASS C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 2–3 weeks (93 hours).

Exhibit Dates: 10/83–Present.

Objectives: To provide the knowledge and skill training necessary to perform the configuration, application, operation, inspection, and repair of aircraft microprocessor based systems at the organizational and intermediate levels of maintenance.

Instruction: Provides hands-on experience in the preparation, operation, repair and maintenance of digital and microprocessor based systems using applicable test equipment, schematic diagrams, and publications.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in electricity and electronics (6/85).

CG-1715-0082

ADL-81 Loran 'C' Receiver Class 'C'

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 4-5 weeks (149-154 hours).

Exhibit Dates: 10/80-Present.

Objectives: To provide specialized training in the theory of operation and maintenance of Long Range Navigation equipment (ADL-81 Loran C/D receiver).

Instruction: Topics include: electronic theory, Loran theory, theory of operation of the ADL-81 and associated test equipment, fault location to the component level, relationship between receiver and other associated equipment such as the active antenna (UPS-95) system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems maintenance laboratory (6/85).

CG-1715-0083

Aviation Electronics Technician AN/ARN-133V2 Class C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 2 weeks (71 hours).

Exhibit Dates: 2/85-Present.

Objectives: To provide specialized training in the maintenance of Loran Navigation equipment (AN/ARN-133V2).

Instruction: Topics include electronic theory and theory of operation for the LORAN Navigator, and practical training in the use of special test equipment, minimum performance testing, and troubleshooting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic electronic maintenance and repair laboratory (6/85).

CG-1715-0084

Aviation Electronics Technician AN/ARN-118(V) Class C

Course Number: None.

Location: Aviation Technical Training Center, Elizabeth City, NC.

Length: 4 weeks (146 hours).

Exhibit Dates: 1/84-Present.

Objectives: To provide advanced specialized training in the maintenance of tactical A in Navigation (TACAN) equipment (AR/ARN-118(V)).

Instruction: Training on the maintenance and operation of the equipment units and modules including performance testing, troubleshooting, and alignment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems maintenance (6/85).

CG-1715-0090

Electronics Fundamentals - Communications Track

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 27 weeks (840 hours).

Exhibit Dates: 10/81-Present.

Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot and repair high frequency and facsimile receivers, and radar units.

Instruction: The program comprises the basic ELF sequence, a common core covering transistors, power supplies, amplifiers, oscillators, logic, microcomputer and special circuits; ELF 08,12 and 13 sequence including communication theory, AM/FM transceivers, antennas and radar fundamentals; COM 03,05,06 and 08 sequence including military radio single sideband transmitter, high frequency and facsimile receivers and shipboard communications systems. The subject matter is qualitative in nature and presented at the block diagram level with schematic signal tracing to the component level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronic fundamentals (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microprocessors in a computer science curriculum, 3 in communications systems, 1 in communications laboratory (2/83).

CG-1715-0091

Electronics Fundamentals - V/S Track #1

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 29 weeks (900 hours).

Exhibit Dates: 10/81-Present.

Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot, and repair radar systems, transceivers, and direction finders.

Instruction: The program comprises the basic ELF sequence (ELF 00, 02, 03, 04, 05, 09, 10, 11), a common core covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits. Lectures and practical exercises in basic electrical concepts (Ohm's Law, series and parallel DC circuits, use of meters), power supply construction and regulation (primarily tube circuitry, introductory AC and 3 phase materials and filtering concepts), amplifier fundamentals (vacuum tube amplifiers relating to distortion, frequency response, degeneration, signal generator usage), transistor fundamentals (testing, biasing, operating points, temperature compensation), oscillators, logic circuits (brief overview of gates, counters, shift registers), microprocessors (overview of terminology, addressing, memory devices, I/O requirements) and specialized circuits (superficial coverage of couplers, inverters, multivibrators and timing circuits, and other pulsed circuits). ELF 08, 12 and 13 is also covered and the topics in this sequence include: communications theory (operation, adjustment and troubleshooting sigle sideband transceivers, AM/FM transmitters and receivers at the block diagram level) antenna operations (radio wave propogation, frequency limitations), transmission lines (wave ratio, reflections, TDR operation) as well as radar fundamentals. Also included are COM 02, 09 and NAV 04 and 13 (homers, direction finders, depth sounders and radar systems) each of these courses covering a specific piece of equipment, with the student learning to operate, troubleshoot and repair each piece to the component level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronic fundamentals, 2 in marine electronic repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microprocessors in a computer science curriculum, 3 in communications systems and 1 in electronics communications laboratory (2/83).

CG-1715-0092

Loran Track #1 for Lorstas, Malone, Senca

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 28 weeks (840 hours).

Exhibit Dates: 10/81-Present.

Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot and repair specific Loran equipment.

Instruction: The program comprises the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas. LOR 06,15, 18 and 19 comprising Loran-C timing and control, remote Austron 5000 and calculation assisted Loran-C. The subject matter covers the theoretical and operational concepts of a navigational system and is qualitative in nature including alignment procedures, block diagram analysis, and schematic signal tracing to the component level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronic fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microcomputers in a computer science curriculum, 2 in communications systems and 1 in electronics communications laboratory (2/83).

CG-1715-0093

Electronics Fundamentals - V/S Track #2

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 26 weeks (780 hours).

Exhibit Dates: 10/81-Present.

Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot and repair FM transceivers, direction finders and surface-search radar.

Instruction: The program comprises the basic ELF sequence, a common core covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits, the ELF 08, 12 and 13 sequence covering communication theory, AM/FM and SSB transceivers, antennas, and radar fundamentals, the COM 02, 10 and NAV 04 and 12 sequences covering FM transceivers, homers, direction finders, depth sounders, SSB transceivers, and surface search radar. The subject matter is qualitative in nature and presented at the block diagram level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in electronic fundamentals, 2 in marine electronic repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microprocessors in a computer science curriculum, 3 in communications systems and 1 in electronic communications laboratory (2/83).

CG-1715-0094

Loran Track #5 for Lorstas, Attu, Baudette, Caribou, Carolina Beach, Estartit, Jupiter, Kargabarun, Kure, Nantuckett, Port Clarence, Shoal Cove, Sylt, Upolu Point

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 26 weeks (720 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronics fundamentals needed to maintain, troubleshoot and repair specific Loran equipment.
Instruction: The program is comprised of the basic ELF sequence, a core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communications theory, AM/FM and SSB transceivers, and antennas; LOR 06 and 16 comprising Loran-C timing and control equipment and Loran-C low power vacuum tube transmitter. The subject matter covers the theoretical and operational concepts of a navigational system and is qualitative in nature, including block diagram analysis and schematic signal tracing to the component level.
Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronics fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microprocessors in a computer science curriculum, 2 in communications systems, 1 in electronics communications laboratory (2/83).

CG-1715-0095

Loran Track #2 for Lorstas, Kodiac, Yakota

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 26 weeks (720 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronics fundamentals needed to maintain, troubleshoot and repair specific Loran equipment.
Instruction: The program comprises the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas; LOR 13 and 19 comprising Austron 5000, Loran-C, control/monitor equipment and calculator assisted Loran-C. The subject matter covers the theoretical and operational concepts of a navigational system and is qualitative in nature, including block diagram analysis and schematic signal tracing to the component level.
Credit Recommendation: In the vocational certificate category, 8 semester hours in electronic fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in circuits and microcomputers in a computer science program, 2 in communications systems, 1 in electronic communications laboratory (2/83).

CG-1715-0096

Loran Track #4 for Lorstas Grangeville, Raymondville

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 26 weeks (780 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronics fundamentals necessary to maintain, troubleshoot and repair specific Loran equipment.
Instruction: The program comprises the basic ELF sequence, a core curriculum covering transistors, power supply, amplifiers, oscillators, logic, microcomputers, and special circuits, ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas; LOR 06 and 15 comprising Loran-C timing and control equipment, and a solid state transmitter. The subject matter covers the theoretical and operational concepts of a navigational system and is qualitative in nature, including block diagram analysis and schematic signal tracing to the component level.
Credit Recommendation: In the vocational certificate category, 8 semester hours in electronic fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in circuits and microcomputers in a computer science curriculum, 2 in communications systems and 1 in electronics communication laboratory (2/83).

CG-1715-0097

Loran Track #3 for Lorsta Honolulu

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 24 weeks (720 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot and repair specific Loran equipment.
Instruction: The program comprises the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas; LOR 18 and 19 comprising remote Austron 5000 and calculator assisted Loran-C. The subject matter covers the theoretical and operational concepts of a navigational system, is qualitative in nature and includes block diagram analysis and schematic signal tracing to the component level. operational concepts of a navigational system, is
Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronic fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microcomputers in a computer science curriculum, 2 in communications systems and 1 in electronics communications laboratory (2/83).

CG-1715-0098

Loran Track #6 For Lorstas Dana, Fallon, George, Gesashi, Hokkaido, Iwo Jima, Lampeduska, Marcus, Narrowcape, Searchlight, Tok, Yap

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 26 weeks (780 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronics fundamentals necessary to maintain, troubleshoot and repair a specific Loran equipment.
Instruction: The program comprises the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas; LOR 06 and 17 comprising Loran-C timing and control equipment, Loran-C high power vacuum tube transmitters. The subject matter covers the theoretical and operational concepts of a navigational system and is qualitative in nature, including block diagram analysis and schematic signal tracing to the component level.
Credit Recommendation: In the vocational certificate category, 8 semester hours in electronics fundamentals, 1 in Loran serice and repair (2/83), in the lower-division baccalaureate/associate degree category, 3 semester hours in circuits and microcomputers in a computer science curriculum, 2 in communications systems, 1 in electronics communications laboratory (2/83).

CG-1715-0099

Loran Track #7 for Lorsta Middletown

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 28 weeks (820 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronics fundamentals necessary to maintain, troubleshoot and repair specific Loran equipment.
Instruction: The program comprises the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas; LOR 06,17,18 and 19 comprising Loran-C timing and control equipment, high power vacuum tube transmitters, remote Austron 5000, and calculator assisted Loran-C. The subject matter covers the theoretical and operational concepts of a navigational system and is qualitative in nature, including block diagram analysis and schematic signal tracing to the component level.
Credit Recommendation: In the vocational certificate category, 8 semester hours in electronics fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in circuits and microcomputers in a computer science curriculum, 2 in communications systems and 1 in electronic communications laboratory (2/83).

CG-1715-0100

Loran Track #8 for Lorsta Sellia Marina

Course Number: None.
Location: Coast Guard Training Center, Governors Island, NY.
Length: 34 weeks (1020 hours).
Exhibit Dates: 10/81–Present.
Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot and repair specific Loran equipment.

Instruction: The program is comprised of the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers, and antennas; LOR 06,13,16 and 19 comprising Loran-C timer and control equipment, Austron 5000 control monitor equipment, low powered vacuum tube transmitter and calculator assisted Loran-C. The subject matter covers the theoretical and operational concepts of a navigation system, is qualitative in nature and includes block diagram analysis and schematic signal tracing to the component level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronics fundamentals, 1 in Loran repair and service (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microcomputer in a computer science curriculum, 2 in communications systems, 1 in electronic communications laboratory (2/83).

CG-1715-0101

Loran Track #9 for Lorsta Johnston Island, St. Paul Island

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 26 weeks (780 hours).

Exhibit Dates: 10/81–Present.

Objectives: To provide enlisted personnel with the basic electronic fundamentals necessary to maintain, troubleshoot, and repair specific Loran equipment.

Instruction: The program is comprised of the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 09 and 12 comprising communications theory, AM/FM and SSB transceivers, and antennas; LOR 06,13 and 16 comprising Loran-C timers and control equipment, Austron 5000 control monitor equipment and low powered vacuum tube transmitters. The subject matter covers the theoretical and operational concepts of a navigation system, is qualitative in nature and includes block diagram analysis and schematic signal tracing to the component level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronic fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in logic circuits and microcomputers in a computer science curriculum, 2 in communications systems, 1 in electronics communications laboratory (2/83).

CG-1715-0102

Loran Track #10 Lorsta Shetland Island

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 26 weeks (780 hours).

Exhibit Dates: 10/81–Present.

Objectives: To provide enlisted personnel with the basic electronics fundamentals necessary to maintain, troubleshoot and repair specific Loran equipment.

Instruction: The program is comprised of the basic ELF sequence, a common core curriculum covering transistors, power supplies, amplifiers, oscillators, logic, microcomputers, and special circuits; ELF 08 and 12 comprising communication theory, AM/FM and SSB transceivers and antennas; LOR 10 covering the AN/FPN-46 timer. The subject matter covers the theoretical and operational concepts of a navigational system, is qualitative in nature and includes block diagram analysis and schematic signal tracing to the component level.

Credit Recommendation: In the vocational certificate category, 8 semester hours in basic electronic fundamentals, 1 in Loran service and repair (2/83); in the lower-division baccalaureate/associate degree category, 3 semester hours in circuits and microcomputer in a computer science program, 2 in communications systems, 1 in electronics communications laboratory (2/83).

CG-1715-0103

1. Mk 92 MOD 1 Fire Control System
2. Fire Control System Mk 92 MOD 1 Class C

Course Number: FT-2.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 18 weeks (672 hours). *Version 2:* 22 weeks (800-816 hours).

Exhibit Dates: *Version 1:* 1/88–Present. *Version 2:* 5/88–12/87.

Learning Outcomes: Upon completion of the course, the student will be familiar with the initialization, operation, and documentation of the Mk 92 MOD 1 fire control system. The troubleshooting training familiarizes the student with basic tools and instruments to detect electrical failures of components in pulse transmitters, power supplies, receivers, and video equipment and serve systems.

Instruction: Well documented procedures are used to maintain, troubleshoot, and replace faulty components on the Mk 92 MOD 1 fire control system. Fundamentals theory is not covered.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hour in electrical control systems maintenance and repair (9/90). *Version 2:* In the vocational certificate category, 3 semester hours in electrical control systems maintenance and repair (10/88).

CG-1715-0104

Mk 27 Gyrocompass System Operation and Maintenance

Course Number: EM-20.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (67-70 hours).

Exhibit Dates: 10/88–Present.

Learning Outcomes: Upon completion of the course, students will be familiar with the technical manual for Mk 27 MOD 1 gyrocompass equipment and will understand the gyrocompass modes of operation and its support equipment, such as the synchro signal amplifier, the power transfer unit, and the power converter. This enables students to perform maintenance, repair, and calibration in accordance with the 'he manufacturer's specifications.

Instruction: Instruction is very specific and detailed, and geared specifically to the Mark 27 MOD 1 gyrocompass. With the aid of a synchro trainer, digital meter, and job sheet, the student will perform zeroing cleaning and maintenance in accordance with manufacturer's specification.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in electronics laboratory (10/88).

CG-1715-0105

Advanced Electrical/Electronics

Course Number: EM-17.

Location: Reserve Training Center, Yorktown, VA.

Length: 11 weeks (400-409 hours).

Exhibit Dates: 1/87–Present.

Learning Outcomes: Upon completion of the course, the student will understand mathematical concepts, DC and AC circuit analysis, the use of test equipment, the concepts of discrete devices, integrated circuits, logic circuits, analog converters, flip-flop circuits, binary shift registers, amplifier circuits, digital display circuits, and other electronic circuits.

Instruction: Lectures, demonstrations, and practical exercises in concepts, fundamentals, and circuit analysis of electricity and electronics. Includes the use of training devices and test equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in AC and DC circuits, 4 in solid state circuits, 3 in logic circuits, 1 in electronics laboratory, and 1 in technical mathematics (10/88).

CG-1715-0106

Mk 29 MOD 1 Gyrocompass Operation and Maintenance

Course Number: EM 26.

Location: Reserve Training Center, Yorktown, VA.

Length: 1-2 weeks (55-58 hours).

Exhibit Dates: 11/87-Present.

Learning Outcomes: Upon completion of the course, the student knows how to operate specialized tools required to check the Mk 29 gyrocompass system to check the performance during simulated roll, pitch and azimuth movements; further, the student is qualified to exchange components and lubricate the bearings.

Instruction: The course content emphasizes the preventive maintenance and troubleshooting on the Mk 29 gyrocompass.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in gyrocompass maintenance (10/88).

CG-1715-0107

Electrical/Electronic Control for Fire Tube Boilers/Oily Water Separator/Electrical Generators Operation and Maintenance Class C

Course Number: EM-21.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (66-70 hours).

Exhibit Dates: 3/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate and maintain the electrical and electronic control systems for auxiliary boilers, oily water separators, and electrical generators.

Instruction: Lectures and practical exercises in the testing and troubleshooting of control circuits of boilers, separators, and generators as applied to specific Coast Guard equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electrical/electronic laboratory (10/88).

CG-1715-0108

Electronics Technician Class A

Course Number: ET A.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 14-15 weeks (465-515 hours).

Exhibit Dates: 10/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate knowledge of electronic safety procedures; use common laboratory instruments and test equipment; apply Ohm's law to circuits and networks; analyze AC circuits; demonstrate an understanding of digital principles and circuits to include multiplexers and demultiplexers; demonstrate an understanding of solid state theory and circuits; use troubleshooting techniques to repair electronic equipment; demonstrate an understanding of communications theory and equipment, such as single sideband receivers; demonstrate an understanding of radar fundamentals.

Instruction: Lectures and practical exercises in electronic theory, electronic safety, corrective and preventive maintenance techniques, and electronic administrative procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic electronics laboratory, 1 in DC circuits, 1 in AC circuits, 3 in digital principles, 4 in solid state electronics, and 4 in electronic communications (11/88).

CG-1715-0109

Telephone Technician Class A

Course Number: TT A.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 22 weeks (748 hours).

Exhibit Dates: 6/87-Present.

Learning Outcomes: Upon completion of the course the student will be able to use common laboratory instruments and test equipment; apply Ohm's law to circuits and networks; analyze DC and AC circuits; demonstrate an understanding of digital principles and circuits to include multiplexers and demultiplexers; demonstrate an understanding of solid state theory and circuits; use troubleshooting techniques to repair telephone and carrier circuits; demonstrate a basic knowledge of special telephone network systems and teletypewriter systems.

Instruction: Lectures and practical laboratory in electricity, electronic circuits, components, solid state theory and practice, printed circuit techniques, digital logic circuits, modulation techniques, communication cable troubleshooting and repair, telephone equipment and circuits, troubleshooting techniques, and teletypewriter equipment repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic electronics laboratory, 1 in DC circuits, 1 in AC circuits, 3 in digital principles, 4 in solid state electronics, 3 in electronic communications, and 3 in telephone communications (11/88).

CG-1715-0110

AN/FPN-44A Loran Transmitter Class C

Course Number: LOR-05.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 1-2 weeks (53 hours).

Exhibit Dates: 12/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, troubleshoot, and maintain a Loran-C electronic location transmitter.

Instruction: Lectures and practical exercises in the operation, logical troubleshooting, repair, and preventive maintenance of the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0111

Timing and Control Equipment Class C

Course Number: LOR-02.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2-3 weeks (110 hours).

Exhibit Dates: 7/87-Present.

Learning Outcomes: Upon completion of the course the student will be able to operate, repair, troubleshoot, and maintain Loran-C electronic location equipment.

Instruction: Lectures and practical exercises in the operations, logical troubleshooting, repair, and preventive maintenance of the specific equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0112

AN/URT-41(V) Transmitting System Class C

Course Number: COM-02.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2-3 weeks (94 hours).

Exhibit Dates: 11/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, troubleshoot, and maintain a high power radio transmitter.

Instruction: Lectures and laboratory exercises in the operation, logical troubleshooting, repair, and preventive maintenance on a specific radio transmitter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0113

CEJT-SX-100/200 Mitel Electronic Private Automatic Branch Exchange (EPABX) Generic 217 Class C

Course Number: TEL-10.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (75 hours).

Exhibit Dates: 6/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, troubleshoot, and maintain an automatic telephone exchange (the Electronic Private Automatic Branch Exchange).

Instruction: Lectures and practical exercises on the operation, logical troubleshooting, repair, and preventive maintenance of the automatic telephone exchange.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0114

Loran-C Control Station Operations

Course Number: LOR-08.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (78 hours).

Exhibit Dates: 11/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform baseline monitoring and control, and troubleshooting and maintenance on the calculator-assisted Loran-C electronic location system.

Instruction: Lectures and practical exercises in equipment functions, operation, baseline control, and maintenance of the Loran-C system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0115

TEL-14 CDXC-SG-1/1A Pulse 120 Electronic Private Automatic Branch Exchange (EPABX) Telephone System Class C

Course Number: TEL-14.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 1-2 weeks (56 hours).

Exhibit Dates: 6/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, maintain, and troubleshoot the CDXC-SG-1/1A Pulse 120 electronic private automatic branch exchange equipment.

Instruction: Lectures and laboratory exercises in safety precautions, equipment operation, programming exercises, preventive maintenance and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0116

CEJT-SX-200 Mitel Electronic Private Automatic Branch Exchange (EPABX) Generic 1000 or 1001 Telephone System

Course Number: TEL-13.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (76 hours).

Exhibit Dates: 5/88-Present.

Learning Outcomes: Upon completion of the course, the student will be able to install and maintain the CEJT-SX-200D electronic private automatic branch exchange (PABX) (automatic telephone exchange).

Instruction: Lectures and laboratory exercises in safety precautions, programming exercises, installation procedures, and troubleshooting techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0117

AN/FPN-42 Loran Transmitter Class C

Course Number: LOR-04.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 1-2 weeks (45 hours).

Exhibit Dates: 12/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, troubleshoot, and maintain the AN/RPN-42 Loran electronic location transmitter.

Instruction: Lectures and laboratory exercises in troubleshooting techniques and maintenance of specific Loran transmitter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0118

AN/FPN-39 Loran Transmitter Class C

Course Number: LOR-03.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 1-2 weeks (45 hours).

Exhibit Dates: 12/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, troubleshoot, and maintain a Loran-C electronic location transmitter.

Instruction: Lectures and practical exercises in the operation, logical troubleshooting, repair, and preventive maintenance of the Loran-C transmitter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0119

AN/SPS-64(V) 1,2,3 Radars

Course Number: NAV-02.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 3 weeks (117 hours).

Exhibit Dates: 11/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, troubleshoot, and maintain the AN/SPS-64(V) 1,2,3 radars.

Instruction: Lectures and laboratory exercises in troubleshooting techniques and maintenance of specific radar systems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0120

AN/SPS-64(V) 4 Radars

Course Number: NAV-03.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 1-2 weeks (61 hours).

Exhibit Dates: 11/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, troubleshoot, and maintain the AN/SPS-64 (V) radar.

Instruction: Lectures and laboratory exercises in the operation, logical troubleshooting, repair, and preventive maintenance on a specific type of radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0121

AN/URC-9 Radio Set Class C

Course Number: COM-04.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (78 hours).

Exhibit Dates: 10/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform corrective and preventive maintenance on the AN/URC-9 transceiver.

Instruction: Lectures and laboratory exercises in equipment operation, parts location, troubleshooting, and preventive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0122

AN/SPS-66 and AN/SPS-66A Radars Class C

Course Number: NAV-01.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (69 hours).

Exhibit Dates: 2/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, align, troubleshoot, and maintain the AN/SPS-66 and AN/SPS-66A radars.

Instruction: Lectures and laboratory exercises in the operation, logical troubleshooting, repair, and preventive maintenance on a specific type of radar system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0123

AN/FPN-64(V) Loran Solid State Transmitter Class C

Course Number: LOR-06.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (70 hours).

Exhibit Dates: 12/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, troubleshoot, and maintain a Loran-C electronic location transmitter.

Instruction: Lectures and practical exercises in the operation, logical troubleshooting, repair, and preventive maintenance of the transmitter.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0124

AN/URC-114(V) Low Power (1KW) Communications System Class C

Course Number: COM-03.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 3 weeks (118 hours).

Exhibit Dates: 11/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to troubleshoot, repair, and maintain a low power communications system.

Instruction: Lectures, demonstrations, and practical exercises in the operation, logical troubleshooting, repair, and maintenance of the equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hour in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0125

Primary Chain Monitor Set Maintenance Class C

Course Number: LOR-07.

Location: Coast Guard Training Center, Governor's Island, NY.

Length: 2-3 weeks (85 hours).

Exhibit Dates: 7/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, repair, troubleshoot, and maintain monitor set equipment.

Instruction: Lectures and practical exercises in the operation, logical troubleshooting, repair, and preventive maintenance of the specific equipment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in electronic systems troubleshooting and maintenance (11/88).

CG-1715-0127

Nautel Radiobeacon Maintenance
(Videograph B Fog Detector Maintenance)

Course Number: *Version 1:* ANC-FD. *Version 2:* ANC-RB.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 2 weeks (41 hours). *Version 2:* 2 weeks (37 hours).

Exhibit Dates: *Version 1:* 1/89–Present. *Version 2:* 3/86–12/88.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to install, operate, align and repair circuits boards and chassis components for the videograph model B fog detector. *Version 2:* Upon completion of the course, the student will be able to repair and maintain the nautel (NX) series of radiobeacons.

Instruction: *Version 1:* Classroom lectures and laboratory exercises involving installation, operation, and preventive and corrective maintenance of the videograph B fog detector. *Version 2:* Classroom lectures, laboratories, reading assignments, and practical examinations involving the operation, preventive maintenance, and corrective maintenance and alignment of the nautel (NX) series of radiobeacons.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical technician for the last segement of the 2 weeks program. This is a course which consisted of two 1-week long courses run consecutively. Credit is recommended for ANC-FD only (11/88). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in electromechanical technician for this segment of the 2 weeks course (ANC-RB) is based on completion also of version 1 (11/88).

CG-1715-0128

Automated Aids to Navigation Lighthouse Technician
(Lighthouse Technician)

Course Number: ANC-LT.

Location: Reserve Training Center, Yorktown, VA.

Length: 3-4 weeks (115 hours).

Exhibit Dates: 5/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate, maintain, repair to component level catagory I through IV automated lighthouse equipment.

Instruction: Instruction in lecture and practical exercises will provide hands on experience. Topics include environmental control systems, fire suppression systems, sound and light systems, and AC/DC power systems. Aids control monitor systems (ACMS) are also covered. Data obtained will be used to upgrade/update Coast Guard directives and publications.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in AC/DC power systems, 2 in records keeping (4/89).

CG-1715-0130

RADARMAN CLASS A

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 12 weeks (470-474 hours).

Exhibit Dates: 9/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to function as a third class radarman as prescribed in the enlisted qualification manual; this includes knowledge and skill training necessary to gather, process, display, evaluate and disseminate operational data in completion of the unit's mission.

Instruction: Lectures and practical exercises in administration, communications, navigation systems, rules of road, safety, search and rescue, operational and preventative maintenance, combat information center operations, detection equipment and interpretation.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic use and operation of a radar system (4/89).

CG-1715-0131

ADVANCED MINOR AIDS TO NAVIGATION MAINTENANCE

Course Number: ANC-AM.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (76 hours).

Exhibit Dates: 3/88-Present.

Learning Outcomes: Upon completion of the course, the student will be able to install, troubleshoot, operate on and maintain minor navigation equipment.

Instruction: Instruction is given in operation, troubleshooting, and maintenance of minor aids, beacons, bouys, and sound signals; bouy tender operations encompassing bouy deck procedures, bouy positioning techniques, piloting and safety; and minor-aid construction; emphasis is placed upon technical report writing on and oral presentations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in analysis of AC/DC circuits (4/89).

CG-1715-0132

AVIATION ELECTRONICS TECHNICIAN FIRST CLASS (AT1) BY CORRESPONDENCE

Course Number: 103-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 9/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify potential safety hazards in the work area/flight line, repair current, voltage and resistance measuring devices, use test equipment to measure frequency waveforms, modulation and standing waves, describe the operating characteristics of electromagnetic wave measuring devices including wavemeters and bridges, repair printed circuit boards, list the advantages and disadvantages of various types of wave guides and the operating principles of micro-wave antennas and feed systems.

Instruction: The major topics covered are safety, voltage, current and resistance measurement, test equipment to measure frequency, waveforms, modulation and standing waves, rpair of prented circuit boards, wave guides and microwave antennas. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic communications (6/90).

CG-1715-0133

SONAR TECHNICIAN SECOND CLASS (ST2) BY CORRESPONDENCE

Course Number: 243-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 12/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify sounds produced by surface ships, submarines and marine life, perform preventive maintenance on sonar equipment, X-Y records signal generators and megohmeters, prepare weekly and monthly preventive maintenance schedules, list calibration procedures for hydrophone and replace sonar transducers.

Instruction: Major topics covered are sound identification, preventative maintenance for sonar equipment, accoustical test equipment operation, preparation of monthly preventive maintenance schedules, and calibration. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (6/90).

CG-1715-0134

TELEPHONE TECHNICIAN FIRST CLASS (TT1) BY CORRESPONDENCE

Course Number: 145-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 6/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to use telephone cable installation and maintenance methods; operate data communication equipment; employ cable fault locating methodology and test equipment methods; identify interior and exterior power distribution systems; construct letters and messages in proper format and meeting security requirements; use procedures for commercial procurement; employ the principles of property management and control.

Instruction: Topics include troubleshooting techniques and equipment for telephone cable; troubleshooting and construction techniques for power lines; transformer load balancing; powerline safety procedures; residential service drops and wiring; theory of cable construction; operation and function of data communication equipment; data communication codes; use of Coast Guard directives, letters, messages, and memoranda; and use of property management and control techniques. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 3 semester hours in outside telephone cable installation and maintenance (6/90).

CG-1715-0135

FIRE CONTROL TECHNICIAN FIRST CLASS (FT1) BY CORRESPONDENCE

Course Number: 127-7; 127-6.

Location: Coast Guard Institute, Oklahoma City, Ok.

Length: Maximum 78 hours.

Exhibit Dates: 10/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to employ safety procedures in the operation and maintenance of fire control equipment; explain the theory of operation of microwave components, antennas, and associated servo equipment; explain ballistic characteristics of major projectiles; explain the operation of fire control equipment in an operational environment; explain battery alignment of a weapons control system and identify proper sources for equipment maintenance; identify administrative procedures and reports.

Instruction: The major topics covered are safety, electronics, fire control fundamentals, maintenance, and administration. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in electronic theory (6/90).

CG-1715-0136

RADIOMAN FIRST CLASS BY CORRESPONDENCE

Course Number: 0141-7; 0141-8.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 9/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to prepare telecommunication reports; identify the various forms and procedures used in preparing telecommunication summaries and reports; define terms and basic communications system components such as amplifiers, oscillators, exciters, multiplexers, receivers and transmitters.

Instruction: Topics include the construction and use of operation orders, operation plans, and pro-forma messages, telecommunication systems and components, security clearances and investigations, and communication officer duties. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (6/90).

CG-1715-0137

FIRE CONTROL TECHNICIAN SECOND CLASS (FT2) BY CORRESPONDENCE

Course Number: 227-8.

Location: Coast Guard Institute, Oklahoma City, Ok.

Length: Maximum 78 weeks.

Exhibit Dates: 10/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to observe safety precautions in dealing with electronic equipment, radioactive devices, toxic compounds, ordnance, and electronic radiation; explain basic electrical and electronic theory; explain the theory of operation of AC devices, vacuum tube circuitry, digital circuitry, and weapons control equipment; employ various base numbering systems and boolean algebra; operate fire control equipment and associated computers and terminals; identify equipment alignment procedures and sources of maintenance; identify administrative procedures and reports.

Instruction: The major topics are safety, electronic fundamentals fire control fundamentals, maintenance and administration. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronic fundamentals (6/90).

CG-1717-0001

Senior Petty Officer Leadership and Management

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Training Center, Petaluma, CA.

Length: 3 weeks (107 hours).

Exhibit Dates: 5/76-6/85.

Objectives: Student will have a basic theoretical understanding and practical working knowledge of basic principles of management, leadership, and human resource development.

Instruction: Topics include group dynamics, motivation theory, interpersonal relations through Transactional Analysis, organizational communications, situational leadership and work planning techniques. Instructional methods include lectures, case studies, role playing, simulation and discussions.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to management or leadership development and human relations (12/77).

CG-1717-0002

Reserve Petty Officer Leadership and Management

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Training Center, Alameda, CA; Training Center, Petaluma, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 12/76-1/90.

Objectives: Student will have a theoretical understanding and practical working knowledge of principles of management, leadership and human resources development.

Instruction: Topics include group dynamics, motivation theory, interpersonal relations through Transactional Analysis, organizational communications, situational leadership and work planning techniques. Instructional methods include lectures, case studies, role playing, simulation and discussion.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to management or leadership development and human relations (12/77).

CG-1717-0003

Leadership and Management (for Junior and Senior Petty Officers, and Reserve Petty Officers and Chiefs)
(Junior Officer Leadership and Management)

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Training Center, Petaluma, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 12/76-1/90.

Objectives: The student will have a theoretical understanding and practical working knowledge of principles of management, leadership, and human resources development.

Instruction: Topics include group dynamics, motivation theory, interpersonal relations through Transactional Analysis, organizational communications, situational leadership and work planning techniques. Instructional methods include lectures, case studies, role playing, simulation and discussion.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to management or leadership development and human relations (12/77).

CG-1717-0004

Reserve Officer, Chief Leadership and Management

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Training Center, Alameda, CA; Training Center, Petaluma, CA.

Length: 2 weeks (70 hours).

Exhibit Dates: 12/76-1/90.

Objectives: The student will have a basic theoretical understanding and practical working knowledge of the basic principles of management, leadership, and human resource development.

Instruction:

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to management or leadership development and human relations (12/77).

CG-1717-0005

Senior Officer Leadership and Management (SOLAM)

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 1 week (48 hours).

Exhibit Dates: 10/80-6/84.

Objectives: To develop knowledge and skills in management and organizational behavior.

Instruction: Topics include group behavior, individual behavior, interpersonal communications, leadership behavior, and problem analysis. Methodology includes lectures, discussion, and practical exercises.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in organizational behavior (7/84).

CG-1717-0006

Leadership and Management

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Training Center, Petaluma, CA.

Length: 2 weeks (73 hours).

Exhibit Dates: 10/80-6/84.

Objectives: To develop knowledge and skills in management and organizational behavior.

Instruction: Topics include group behavior, individual behavior, interpersonal communications, leadership behavior, and problem analysis. Methodology includes lecture, discussions and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in human relations/management (7/84).

CG-1717-0007

Reserve Senior Petty Officer Leadership and Management

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (73 hours).

Exhibit Dates: 12/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to exercise management skills in communication and leadership in assigned supervisory positions.

Instruction: Instruction includes situational leadership, power, motivation, change, group dynamics, and decision-making, teambuilding, communications, performance management, and problem-solving. Instructional methods include lecture and discussion with emphasis on roleplaying, case studies, structured experiences and group activities.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in leadership (8/87).

CG-1717-0008

Reserve Officer Leadership and Management

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (73 hours).

Exhibit Dates: 12/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to exercise management skills in communcation, teambuilding and leadership in assigned supervisory positions.

Instruction: Instruction includes communications, leadership development, teambuilding, conflict management, change management, and problem-solving.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in leadership (8/87).

CG-1717-0009

Officer Leadership and Management

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (71 hours).

Exhibit Dates: 11/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to exercise management skills in communication, teambuilding and leadership in assigned supervisory positions.

Instruction: Instruction includes communications, leadership development, teambuilding, conflict management, change management, and problem-solving. Instructional methods include lecture and discussion, practical exercises, and case studies, and roleplaying.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in leadership (8/87).

CG-1717-0010

Senior Petty Officer Leadership and Management

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (71 hours).

Exhibit Dates: 7/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to exercise management skills in communication and leadership in assigned supervisory positions.

Instruction: Instruction includes situational leadership, power, motivation, change, group dynamics and decision-making, team-building, communications, performance management, and problem-solving. Instructional methods include lecture and discussion with emphasis on role playing, case studies, structured experiences and group activities.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in leadership (8/87).

CG-1722-0001

Fireman by Correspondence

Course Number: *Version 1:* 0450. *Version 2:* 450-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: *Version 1:* Maximum 104 weeks. *Version 2:* Maximum 52 weeks.

Exhibit Dates: *Version 1:* 7/83–Present. *Version 2:* 11/74–6/83.

Objectives: To provide basic nonresident training for fireman apprentices in the area of main propulsion machinery, damage control, auxiliary machinery and hand tools.

Instruction: *Version 1:* Course covers the study of the nature of steam, steam and water cycles, boilers, steam turbines, gasoline and diesel internal combustion engines, main propulsion systems, shipboard damage control and the safe use and maintenance of hand tools. Students are required to successfully complete a proctored end-of-course examination. *Version 2:* Course presents names and functions of the various types of main propulsion machinery; the student learns how to use hand tools. Auxiliary machinery used by the Coast Guard in the performance of its duties is identified and its functions explained. Course includes proctored end-of-course examination.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in marine engineering (5/85). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in marine auxiliary equipment, 1 in introduction to marine engines (5/79).

CG-1722-0002

Quartermaster Second Class (QM2) by Correspondence

Course Number: 237-5.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 5/75–6/86.

Objectives: To provide training for prospective quartermasters second class in navigation and related topics needed to attain that rate.

Instruction: This nonresident course includes communications, degaussing, steering, charts, rules of the road, basic weather, honors and ceremonies. Course includes proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in coastwise navigation and piloting, 1 in applied meteorology (5/79).

CG-1722-0003

Quartermaster Third Class (QM3) by Correspondence

Course Number: 337-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 10/73–6/86.

Objectives: To provide training for prospective quartermasters, third class, in basic navigation and related topics needed to attain that rate.

Instruction: This is a nonresident course covering basic navigation, the magnetic compass, familiarization with navigation rules, bridge communications, nautical charts and publications, aids to navigation, and tides and currents. Course includes proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in coastwise navigation (5/79).

CG-1722-0004

Aids to Navigation Construction

Course Number: None.

Location: Training Center, Governors Island, NY.

Length: 2 weeks (72 hours).

Exhibit Dates: 7/78–1/83.

Objectives: To teach Coast Guard personnel to fabricate and construct aids to navigation structures.

Instruction: Course is designed to develop knowledge and skills in crane operation as follows: loading, unloading, pile driving, servicing of crane equipment. Also includes soil analysis, pneumatic equipment and information on wire and synthetic lines. Course concludes with proctored examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in the construction field (8/78).

CG-1722-0005

Coastal Search Planning Class C

Course Number: None.

Location: Coast Guard Training Center, Governors Island, NY.

Length: 2 weeks (73 hours).

Exhibit Dates: 1/81–12/86.

Objectives: To train personnel in all aspects of search and rescue skills.

Instruction: Lectures and practical exercises in coastal search and rescue planning including the use of private and public facilities, communications, emergency care, position plotting, water search patterns, documentation, legal aspects and public relations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic navigation or 2 semester hours in personnel systems management (2/83).

CG-1722-0006

Small Boat Magnetic Compass Calibration (SBMCC) by Correspondence

Course Number: 0641.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 4/83–Present.

Objectives: To introduce the theory and basic and practical application of magnetic compass calibration.

Instruction: Topics include the basic theory of magnetism, causes of variation and deviation and their practical application, methods of determining deviation, and procedures for adjusting small boat magnetic compasses to reduce deviation. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in nautical science (5/85).

CG-1722-0010

Coastal Search Planning Class C

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (76 hours).

Exhibit Dates: 12/86–Present.

Learning Outcomes: Upon completion of the course the student will have attained the necessary skills and knowledge to plan and coordinate, in accordance with the National Search and Rescue Manual, a search and rescue mission with emphasis on coastal waters.

Instruction: Lectures in coastal search and rescue planning including the use of private and public facilities, communications, emergency care, position plotting, water search patterns, documentation, legal aspects and public relations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic navigation (11/88).

CG-1722-0011

Maritime Reserve Coordination Center (RCC) Controller (Comprehensive Search and Rescue (SAR) Planning Class C)

Course Number: None.

Location: Reserve Training Center, Yorktown, VA; Coast Guard Training Center, Governor's Island, NY.

Length: 2 weeks (85 hours).

Exhibit Dates: 2/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan and coordinate a search and rescue mission at sea in accordance with the National Search and Rescue Manual.

Instruction: Instruction on the organization, documentation, public information procedures, international rescue facilities, navigation, and with consideration of wind and ocean induced drift, determination of most probable position of emergency. Thirty-five hours are devoted to practical exercises in a laboratory environment.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in basic navigation and 1 in search and rescue procedures (11/88).

CG-1722-0012

Coastal Defense Planner, Port Level

Course Number: MS 732.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (46 hours).

Exhibit Dates: 10/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to prepare Port Level Operation Plans (OPLONS) to support missions of the Coast Guard and Maritime Defense Zone (MDZ) administrative and operational control in national emergencies.

Instruction: The method of instruction will include some lecture and self paced study, but will be mostly practical experiences working in groups under supervision.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in management problems (4/89).

CG-1722-0013

Coastal Defense Exercise Planner, Port Level

Course Number: MS 735R.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (56 hours).

Exhibit Dates: 10/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to plan, write reports and evaluate results of the requirements to meet planned field training exercises in their application to training of the armed forces in relation to coastal defense; he/she will write operation orders, execute planning, budgeting, billeting, and controlling of the FTX and also evaluation to identify problem areas and recommend corrective actions.

Instruction: The course will contain lecture and practical exercise to provide hands-on experience in planning, execution and evaluation of port level requirements for field training exercises for coastal defense.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical and report writing (4/89).

CG-1723-0001

Machinery Technician First Class by Correspondence

Course Number: 132-2; 132-3; 0132.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 5/78–Present.

Objectives: To provide nonresident training in the areas of engine efficiency, clutches and reduction gears, fuel systems, lathe operation, and bench work.

Instruction: Upon completion of the course the student will be able to describe lathe operation and associated bench work. The trainee should understand how clutches and reduction gear are used in marine engine work and will explain the Detroit diesel fuel systems used by the Coast Guard. Description of lathe operations and bench work associated with lathe operations are provided and trainee will practice these descriptive operations at duty station. Course also explains the diesel fuel system pump and injectors; describes clutches and reduction gears and their relation to marine engine efficiency. There is a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic machine shop, 2 in diesel fuel systems (5/79).

CG-1723-0002

Machinery Technician Second Class by Correspondence

Course Number: 232-2; 0232-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 9/77–Present.

Objectives: To provide training in the area of hydraulic systems, maintenance of internal combustion engines, gas turbine engines, refrigeration, and air conditioning.

Instruction: This course consists of seventeen lessons and proctored end-of-course examination. Each lesson has one or more reading assignments followed by a series of self-scoring questions. Student will be able to describe, troubleshoot, and repair most hydraulic systems components, explain the performance of proper maintenance repairs on internal combustion engines, describe turbine engines, clutching, and free turbine operation procedures, and explain proper hot section inspection and lockwiring of components.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic hydraulics, 2 in basic diesel, 2 in basic gas turbine, and 2 in basic refrigeration and air conditioning (5/79).

CG-1723-0003

Machinery Technician Third Class by Correspondence

Course Number: 332-1; 332-2; 332-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 11/76–Present.

Objectives: To enable student to identify and explain gas turbine fundamentals and characteristics including lubricating oil systems, cooling systems, starting systems, and fuel systems.

Instruction: The student will study gas turbine fundamentals, beginning and advanced engine systems. Course also includes review of basic principles of electricity and how it is used aboard ship. Student learns basic principles of refrigeration and air compressor systems as they exist in a shipboard environment. The operation of distilling plants and their boilers as well as the general operation of firerooms aboard ship are reviewed. There is a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in gas turbine fundamentals, 2 in marine auxiliary equipment, 2 in shipboard electricity (5/79).

CG-1723-0004

Class A Machinery Technician

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 16 weeks (555 hours).

Exhibit Dates: 5/79–11/86.

Objectives: To train enlisted personnel to perform as junior petty officers at the entry level in the machinery technical rating on Coast Guard cutters and stations.

Instruction: Lectures and practical exercises on the use of precision hand and machine tools, theory and practice in basic hydraulics, the internal combustion engine, diesel engine, clutches/shifting mechanisms, basic refrigeration and welding. For the course after 12/86, see CG-1723-0005.

Credit Recommendation: In the vocational certificate category, 4 semester hours in machine shop practices, 3 in basic refrigeration (12/79); in the lower-division baccalaureate/associate degree category, 3 semester hours in internal combustion engines (12/79).

CG-1723-0005

Machinery Technician Class A

Course Number: MKA.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 11 weeks (334 hours). *Version 2:* 15 weeks (522 hours).

Exhibit Dates: *Version 1:* 11/88–Present. @@ 12/86–10/88.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to describe the operation and parts of two stroke and four stroke gasoline and diesel engines; explain the nasic components and functions in an axial flow gas turbine engine; explain the use and operation of marine engine cooling systems; perform tests on engine fuels and lubricants; explain the operation of engine governors, diesel injectors, gearing, clutch assemblies, and drive shafts; describe the principles of electricity and engine ignition, starting and charging; describe the operation auxiliary boilers and related compontnes; explain the operation of a refrigeration system and the duties and tasks of a small craft engineer. *Version 2:* Upon completion of the course, the student will be able to demonstrate the use of hand tools, measuring tools, and basic machine tools; describe the operation of fluid power components, the theory of operation and parts of two stroke, four stroke diesel engines; explain the use and operation of marine engine cooling systems; perform tests on engine fuels and lubricants; explain the operation of engine governors, diesel injectors, reduction gears, clutch assemblies, and drive shafts; understand the principles of electricity and engine ignition, starting and charging system: describe the operation of auxiliary boilers and related components; explain the operation of a refrigeration system and the duties and tasks of a small craft engineer.

Instruction: *Version 1:* Lectures and lecture/laboratories covering basic internal combustion engines, axial flow gas turbine engine, starting systems, cooling systems, lubricants, reclaiming lub oil, governors, fuel sustems, diesel engine tune-up, clutches, gearing, air compressors, electricity, ignition, generators/alternators, small boat engineering, blower/turbo chargers, auxiliary boilers, water distillation, and refrigeration. *Version 2:* Lectures, demonstration, and practical experiences in machine shop operation, internal combustion engines, fluid power systems, clutch and drive trains electrical systems, refrigeration systems, and small craft engineering.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in internal combustion engines, 1 in marine drive train, 2 in engine electrical systems, 1 in basic refrigeration, and 1 in small craft engineering (9/90). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in machine shop practices, 2 in internal combustion engines, 2 in ignition and electrical systems, 1 in small craft engineering and 1 in refrigeration (10/88).

CG-1728-0001

Port Security/Law Enforcement Officer

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 5-6 weeks (146 hours).

Exhibit Dates: 1/66-12/73.

Objectives: To train officers in the fundamentals and techniques of criminal justice, police administration, and port security.

Instruction: General law; police administration; source of law; law enforcement; jurisdiction, evidence, arrest; investigations and reports; port security laws; public relations; communications; riot control, arson, sabotage, and countersabotage; weapons training; first aid; firefighting; pier construction; waterfront security; water pollution; port security; fingerprinting; cargo control; dangerous cargo.

Credit Recommendation: In the vocational certificate category, 3 semester hours in criminal justice (11/73).

CG-1728-0002

Port Security/Law Enforcement Enlisted

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 5-6 weeks (154 hours).

Exhibit Dates: 1/66-12/73.

Objectives: To train students in criminal justice techniques and port security operations.

Instruction: General law; source of law; law enforcement; jurisdiction, evidence, arrest; investigations and reports; port security, operations, laws; public relations; communications; riot control; arson, sabotage, weapons; first aid; firefighting; pier construction; waterfront security; water pollution; port security; fingerprinting; cargo control; dangerous cargo.

Credit Recommendation: In the vocational certificate category, 3 semester hours in criminal justice (11/73).

CG-1728-0003

Maritime Law Enforcement

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 5 weeks (150-200 hours).

Exhibit Dates: *Version 1:* 10/82-9/87. *Version 2:* 12/77-9/82.

Objectives: To train commissioned and noncommissioned officers as federal law enforcement officials.

Instruction: *Version 1:* Lectures and practical exercises in the duties and skills necessary to act as an agent of the federal government in legal and court situations. Topics include a brief history of the U.S. government; and thorough coverage of relevant constitutional, international and criminal law, military law, court procedures, prosecution, laws of evidence, search and seizure, suveillance, weapons training, arrest law and procedure, authority and interrogation procedures. *Version 2:* Lectures and practical exercises in the duties and skills necessary to act as an agent of the federal government in legal and court situations. Topics include a brief history of the U.S. government, constitutional, international and criminal law, military law, court procedures, prosecution, laws of evidence, search and seizure, surveillance, weapons training, authority and interrogation procedures.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in political science (criminal justice system) and 2 in law enforcement laboratory (maritime) (7/84). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in law enforcement, 1 in political science (12/79).

CG-1728-0004

Port Security School

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 6-10 weeks (204-357 hours).

Exhibit Dates: 3/79-5/89.

Objectives: To train students in criminal justice techniques and port security operations.

Instruction: Lectures and practical exercises in general law, law enforcement, jurisdiction, evidence, arrest, investigation and reports, port security operation, public relations and communications, riot control, arson, water pollution, cargo control, dangerous cargo and firefighting.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in law enforcement, 2 in firefighting (12/79). Comparative compliance under state municipal police training standards for firearms qualification and techniques and mechanics of arrest and comparative compliance standards for firefighters in fire and gas techniques may also be met by this course (5/86).

CG-1728-0005

Firefighting Ashore (FFASH) by Correspondence

Course Number: 478-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 11/84-Present.

Objectives: To provide training in the principles and techniques of firefighting ashore.

Instruction: Topics include Coast Guard port safety authority and policy, roles of the firefighter, chemistry and behavior of fire, personnel safety and protective breathing apparatus, ropes, knots, and hitches, portable extinguishers, fire hose, fire streams and water supply, ladders, fire apparatus, rescue, forcible entry, ventilation, salvage and overhaul, sizing up and tactics/strategy used in firefighting, and hazardous material incident analysis. The principle textbook for this course is "Fire Service Practices for Volunteer Fire Departments" published by the International Fire Service Training Association (IFSTA). Students are required to successfully complete a proctored final examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in fire science technology (5/85).

CG-1728-0006

Fire Prevention (FIRPREV) by Correspondence

Course Number: 436-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/81-Present.

Objectives: To provide training in the principles and techniques of fire prevention and fire safety inspections.

Instruction: Topics include fire prevention and fire safety inspection practices, fire department facilities planning and procedures, and water supplies for fire protection. Textbooks used for this course are "#110,Fire Prevention and Inspection,""#205,Water Supplies," and "#302, Facilities, Planning, and Procedures" published by the Intenational Fire Science Training Association (IFSTA). Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in fire science technology (5/85).

CG-1728-0007

Firefighting on Vessels (FFVES) by Correspondence

Course Number: 427, 427-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/82-Present.

Objectives: To provide training in the basic principles of shipboard firefighting.

Instruction: Course describes pumping equipment, vapor detection devices, personal protective equipment, shipboard firefighting systems, appliances and portable fire equipment. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in fire science technology and 1 in nautical science (5/85).

CG-1728-0008

Firefighter First Class (FI1) by Correspondence

Course Number: 125-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 3/83-9/89.

Objectives: To train personnel in the characteristics of fire behavior, types of firefighting and firefighting techniques.

Instruction: Course covers the characteristics of fire behavior, types of fire fighting equipment (extinguishers, ropes, ladders, protective breathing apparatus, water supplies and sprinkler systems), and firefighting techniques including fire prevention, salvage and overhaul practices and communications. Course includes booklets that cover the operating principles of different types of fireboats and equipment carried on board, waterfront facility fires, cargo hold fires on vessels and the safe transportation of hazardous materials. International Fire Science Training Association manual "Essentials of Firefighting" is the primary reference text for the course. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in fire science technology (5/85).

CG-1728-0009

Port Securityman Third Class (PS3) by Correspondence

Course Number: 365-1.

Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 7/81–Present.
Objectives: To present basic principles of port security, law enforcement, fire protection and hazardous materials control.
Instruction: Course offers basic instruction in the enforcement of federal laws governing the transportation, storage and containment of vessels and their cargos in an industrial setting. The elements of arrest and search and seizure are covered including the concepts of jurisdiction, warrant and warrantless searches. This course also covers basic firefighting information, techniques, equipment and appliances, placarding and hazardous materials control. There is also coverage of environmental protection as related to the federal Water Pollution Control Act and regulations governing vessel cargo packaging. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in industrial security (5/85).

CG-1728-0010

PORT SECURITYMAN FIRST CLASS (PS1) BY CORRESPONDENCE

Course Number: 165-2.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 11/79–Present.
Objectives: This course is designed to train enlisted personnel to perform the duties of port securityman first class.
Instruction: Course includes rules of evidence, interrogation and criminal investigation, chemical identification, and oil pollution investigations. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/85).

CG-1728-0011

PORT SECURITY BASIC (PSB) BY CORRESPONDENCE
(Port Security Second Class (PS2) by Correspondence)

Course Number: 0335-2,; 0265.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 2/80–10/89.
Objectives: Provides training in three areas of port security: law enforcement, hazardous materials controls and environmental protection, and basic firefighting techniques and procedures.
Instruction: Phase I covers the basic techniques and tactics of law enforcement, procedures and arrest, search and seizure, basic investigation techniques including interviewing, fingerprinting and photography, the judicial process, and an overview of industrial safety and security. Phase II covers the role of the Coast Guard with regard to violation of environmental protection statutes relating to vessels, inspections, oil spills, and hazardous materials accidents and response procedures. Phase III covers the elements of firefighting techniques, equipment and appliances, and response procedures; special attention is devoted to the security and safety in handling, loading, and storage of military explosives.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to law enforcement procedures, 1 in introduction to fire science, 2 in pollution identification and containment (5/85).

CG-1728-0012

WATERFRONT PROTECTION (WATPRO) BY CORRESPONDENCE

Course Number: 423-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 3/81–Present.
Objectives: Covers the law enforcement duties of the captain of the port in relation to waterfront protection.
Instruction: Provides an overview of arrest and search procedures, fingerprinting, and self-defense.
Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/85).

CG-1728-0013

LAW ENFORCEMENT (LAWENF) BY CORRESPONDENCE

Course Number: 403-3.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 1/79–Present.
Objectives: To provide training in the development and application of law enforcement duties and responsibilities of the Coast Guard in marine activities.
Instruction: Course covers the topics of constitutional law, rules of evidence, statutory authority, and principles of marine law enforcement. Course also includes navigation rules and regulations, jurisdiction, customs, boating safety and inspections and investigative techniques. Students are required to successfully complete a proctored end-of-course examination.
Credit Recommendation: In the vocational certificate category, 1 semester hour in marine patrol and law enforcement (5/85).

CG-1728-0014

INVESTIGATOR 1 (IV1) BY CORRESPONDENCE

Course Number: 0166-1.
Location: Coast Guard Institute, Oklahoma City, OK.
Length: 104 weeks maximum.
Exhibit Dates: 12/83–Present.
Objectives: To provide criminal investigation training.
Instruction: Topics include the theory and application of criminal investigation techniques including rules of evidence and court procedure, search and seizure, use of force, interrogation, use of informants, evidence collection and preservation, and coordination with other agencies at state and federal level. Also includes coverage of physical plant security techniques and devices, security measures, background checks and counterintelligence.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in criminal investigation (5/85).

CG-1728-0015

PORT SAFETY/SECURITY OFFICER CORE

Course Number: MS 402R.
Location: Marine Safety School, Yorktown, VA.
Length: 2 weeks (67 hours).
Exhibit Dates: 10/84–7/88.
Objectives: To train students in the research of laws, regulations and objectives of marine safety.
Instruction: Course consists of lecture overview of aspects of the marine safety program related to vessel orientation, port safety, jurisdiction, laws and statutes, Coast Guard policies and pollution control. For the course after 8/88, see exhibit CG-1728-0029.
Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/86).

CG-1728-0016

PORT SAFETY AND SECURITY ENLISTED

Course Number: MS 421R.
Location: Marine Safety School, Yorktown, VA.
Length: 2 weeks (67 hours).
Exhibit Dates: 10/84–3/86.
Objectives: To prepare students for entry into port security positions.
Instruction: Lectures and practical exercises in methods and techniques of inspection and identification of violations of hazardous cargo storage and handling procedures, pollution prevention regulations and law enforcement resposibilities.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hours in law enforcement practicum (4/86).

CG-1728-0017

INVESTIGATION DEPARTMENT

Course Number: MS 472R.
Location: Marine Safety School, Yorktown, VA.
Length: 3 weeks (112-113 hours).
Exhibit Dates: 10/84–Present.
Objectives: To train student in investigative research techniques.
Instruction: Lectures and practical exercises regarding violations of laws, regulations, and acts of violence in the marine industry. Includes analysis of laws, collection and preservation of evidence, court procedures and case preparation.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical report writing, 3 in evidence collection and preservation and 3 in introductory risk management (4/86).

CG-1728-0018

MARINE SAFETY PETTY OFFICER

Course Number: MS 400R.
Location: Marine Safety School, Yorktown, VA.
Length: 6 weeks (226 hours).
Exhibit Dates: 10/84–7/88.
Objectives: To train enlisted personnel in the areas of security and pollution concerns.
Instruction: Lectures, labs and practical exercises in laws and authorites, vessel traffic management, vessel boarding, pollution prevention, navigation safety, cargo operations, monitoring, investigations, post security functions, oil spill and hazardous chemical response, toxicological problems, respiratory and personal protection, flammable and toxic vapor detection and measurement and hazardous chemical transportation.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in industrial security techniques, 3 in security practicum, 3 in

report writing, 3 in oral communication and 3 in environmental management (4/86).

CG-1728-0019

Inspection Department

Course Number: MS 452R.

Location: Marine Safety School, Yorktown, VA.

Length: 7 weeks (254 hours).

Exhibit Dates: 10/84-Present.

Objectives: To train officers and petty officers to perform supervisory and marine inspection duties at marine safety units.

Instruction: Lectures and practical experience in procedures for inspection of structures, fittings and accomodations on all types of vessels. Student may also have taken a one-week marine safety core course vehicle consisted of laws, regulations and directives involving marine industry, terminology, ship design and construction, individual safety, and the role of the Coast Guard in law enforcement pollution control and regulations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in deck inspection methods and 4 in engine inspection methods. If the one-week marine safety core was also completed, in the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to marine industry and regulations is recommended. in the upper-division baccalaureate category, 3 semester hours in inspection management (4/86).

CG-1728-0020

Port Operations

Course Number: MS 422R.

Location: Marine Safety School, Yorktown, VA.

Length: 7 weeks (250 hours).

Exhibit Dates: 10/84-3/86.

Objectives: To provide selected petty officers and civilian personnel with advanced technical training and knowledge of port operations departments and marine safety units.

Instruction: This course includes a study of marine safety environmental programs, laws and authorities, vessel traffic management, vessel boarding, pollution prevention, navigation safety, cargo operations monitoring, PES and MER investigations, port security considerations and physical security for facilities, oil spill response, hazardous chemical response policy, toxicological problems, CHRIS, respiratory and personal protection, flammable and toxic vapor detection and measurement, and hazardous chemical transportation. Student may also have taken a one-week marine safety core course which consisted of laws, regulations and directives involving marine industry, terminology, ship design and construction individual safety, and the role of the Coast Guard in law enforcement pollution and regulations. After 4/86, see CG-1728-0031.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in cargo operations, 5 in harbor control and security, 3 in hazardous cargo operations and 1 in funding and documentation. If the one-week marine safety core was completed; in the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to marine industry and regulation is also recommended (4/86).

CG-1728-0021

Maritime Law Enforcement Boarding Officer

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 3-4 weeks (144 hours).

Exhibit Dates: 5/88-Present.

Learning Outcomes: Upon completion of the course,the student will be able to perform all duties relative to maritime lawyers in enforcement officer in admistrative inspections, search, seizure, arrest, use of force, crime scene processing, and case file preparation.

Instruction: Includes lectures, group discussions, and practical exercises in topic areas such as authority and jurisdiction, use of force, applied concepts of law enforcement, enforcement of law and treaties, U.S. flag, fisheries, and criminal law procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in law enforcement or police science, 1 in political science (4/89); in the upper-division baccalaureate category, 3 semester hours in criminal justice (4/89).

CG-1728-0022

Maritime Law Enforcement Basic Boarding

Course Number: MLE C.

Location: Reserve Training Center, Yorktown, VA.

Length: 5 weeks (166 hours).

Exhibit Dates: 10/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of a maritime law enforcement officer including understanding the applicable legal concepts; perform advanced boarding procedures including administrative inspections, search, seizure, arrest, use of force, crime scene processing, case file preparation and courtroom procedures.

Instruction: Includes lectures, group discussions and practical exercises in authority and jurisdiction, use of force, applied concepts of law and enforcement, enforcement of laws and treaties; U.S. flag, general, fisheries, and criminal law and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in law enforcement and police science, 1 in political science (4/89); in the upper-division baccalaureate category, 3 in criminal justice justice (4/89).

CG-1728-0023

Maritime Law Enforcement Advanced Boarding Officer Class C

Course Number: MLE ADV.

Location: Reserve Training Center, Yorktown, VA.

Length: 3 weeks, (120 hours).

Exhibit Dates: 4/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of a maritime law enforcement boarding officer; advanced boarding procedures including teamwork and officer safety, administrative inspections, search, seizure, arrest, use of force, crime scene processing, and case file preparation.

Instruction: Includes lectures, group discussions, and practical exercises in the performance as a boarding officer; included are topic areas such as authority and jurisdictions, use of force, applied concepts of law enforcement, enforcement of laws and treaties and criminal law and procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in law enforcement or police science (4/89).

CG-1728-0024

Maritime Law Enforcement Instructor

Course Number: MLEIC.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (75 hours).

Exhibit Dates: 9/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the duties of a maritime law enforcement training officer at a field unit; must have an understanding of topics such as defensive tactics, field sobriety, and Coast Guard MLE training techniques.

Instruction: Includes lectures, group discussions, and practical exercises in use of force, sobriety enforcement, and instructor methodology.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in instructor methods or teaching methods, 3 in police science or law enforcement (4/89).

CG-1728-0025

Port Physical Security Practical

Course Number: MS 423R.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (85 hours).

Exhibit Dates: 5/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to carry out all assigned duties relating to security and law enforcement of waterfront facilities, vessels, and waterways during peacetime and wartime scenarios in the port operations department.

Instruction: Lectures, Socratic and practical exercises with emphasis on hands-on training demonstrations; subjects include facility security, physical security system capabilities, cargo/personnel facility access control, patrol techniques, vessel security, application of cargo security principles to CG port security, risk, threat and vulnerability assessments, including OPSEC, COMSEC, and intelligence coordination, maritime counter-terrorism and law enforcement policies and techniques.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/89).

CG-1728-0026

Port Physical Security Management

Course Number: MS 425R.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (60 hours).

Exhibit Dates: 7/86-Present.

Learning Outcomes: Upon completion of the course, the student will have gained an understanding of management techniques as applicable to port environment, Coast Guard responsibilities and security procedures and methods.

Instruction: Course material will be covered in a lecture format with some practical and written exams to assure understanding and comprehension.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 3 semester hours in administrative management (4/89).

CG-1728-0027

Port Security Safety Enlisted

Course Number: MS 421R.

Location: Marine Safety School, Yorktown, VA.

Length: 2 weeks (67 hours).

Exhibit Dates: 4/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to research and apply laws, regulations, and the objectives of marine safety as related to their applications in the handling of hazardous materials and will have become effective at enforcing the laws and regulations as they apply to the safety and security functions.

Instruction: Lectures and practical exercises in methods and techniques of inspection and identification of violations of hazardous cargo storage and handling procedures, pollution prevention regulations and law enforcement resposibilities.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in law enforcement practicum (4/89).

CG-1728-0029

Port Security and Safety Officer

Course Number: MS 402R.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (67 hours).

Exhibit Dates: 8/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to research and apply laws, regulations and the objectives of marine safety, as related to their application in the handling of hazardous material, and become effective at enforcing the laws and regulations as they apply to the safety and security functions.

Instruction: Course consists of lecture overview of aspects of the marine safety program related to vessel orientation, port safety, jurisdiction, laws and statutes, Coast Guard policies and pollution control.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in law enforcement practicum (4/89).

CG-1728-0030

Marine Safety Petty Officer

Course Number: MS 400R.

Location: Reserve Training Center, Yorktown, VA.

Length: 6 weeks (199-201 hours).

Exhibit Dates: 8/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform in the areas of security and pollution concerns in cargo and vessel compliance, facility compliance, waterways management, pollution response authority, investigations, and pollution case files.

Instruction: Includes lectures, pratical exercises and exercise reviews in law and authority; handling of dangerous cargo manifests such as commerical explosives, radioactive materials, flammable or combustible liquids, pressurized materials, and monitoring and boarding procedures, also includes the topics of monitoring, investigations, post security functions, oil spill and hazardous chemical response, toxicological problems, flammable and topic vapor detection and measurement and hazardous chemical transportation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in industrial security techniques, 3 in environmental management, 3 in industrial security practicum, and 3 in report writing (4/89).

CG-1728-0031

Port Operations Department

Course Number: MS 422R.

Location: Reserve Training Center, Yorktown, VA.

Length: 7 weeks (290 hours).

Exhibit Dates: 4/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to carry out advanced technician and supervision duties in the port operations department.

Instruction: Lectures, demonstrations, and practical exercises will be presented, with emphasis on hand-on experiences.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in cargo operation, 5 in harbor control and security, 3 in hazardous cargo operation, and 1 in funding and documentation (4/89).

CG-1729-0001

Commissaryman, Class A

Course Number: None.

Location: Coast Guard Training Center, Groton, CT.

Length: 16 weeks (686 hours).

Exhibit Dates: 6/64–10/72.

Objectives: To train cooks and bakers for mess operations.

Instruction: Principles and techniques of cooking and baking, with some instruction in purchasing and menu planning.

Credit Recommendation: In the vocational certificate category, 3 semester hours in hotel, restaurant, and institutional curricula (12/73); in the lower-division baccalaureate/associate degree category, 3 semester hours in hotel, restaurant, and institutional curricula (12/73); in the upper-division baccalaureate category, 3 semester hours in hotel, restaurant, and institutional curricula (12/73).

CG-1729-0002

Subsistence Specialist, Class A
(Subsistence Specialist)

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: *Version 1:* 13 weeks (646 hours). *Version 2:* 16 weeks (562–766 hours). *Version 3:* 18 weeks (909 hours).

Exhibit Dates: *Version 1:* 2/79–7/85. *Version 2:* 4/76–1/79. *Version 3:* 11/72–3/76.

Objectives: To train subsistence specialists to operate and manage general messes, officer messes, and private messes.

Instruction: *All Versions:* Training covers all subject matter found in introductory food production and volume food service management courses. *Version 2:* Upon completion of this enlisted course the student should be able to prepare food for the enlisted and officer food service facilities under supervision of a senior staff officer. *Version 3:* Upon completion of this enlisted course the student should be able to prepare food for the enlisted and officer food service facilities under supervision of a senior staff officer.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 4 semester hours in basic volume food preparation (8/80). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic volume food preparation (8/80). *Version 3:* In the lower-division baccalaureate/associate degree category, 6 semester hours in hotel, restaurant, and institutional management (12/73); in the upper-division baccalaureate category, 6 semester hours in hotel, restaurant, and institutional management (12/73).

CG-1729-0003

Subsistence Specialist, Class C

Course Number: None.

Location: Training Center, Petaluma, CA.

Length: 4–5 weeks (141–154 hours).

Exhibit Dates: 5/78–1/90.

Objectives: Course is a refresher course for NCO E-6 and a formal skills improvement course to provide E-4s more advanced learning experiences in supervision and administration.

Instruction: The course covers sanitation, record keeping, supervision, organization and management, business correspondence, purchasing and receiving of food and equipment on an advanced level beyond that of the Class A school.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in food service management (8/80).

CG-1729-0007

Subsistence Specialist, Class A

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 13 weeks (481 hours).

Exhibit Dates: 5/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to prepare and store food under safe and sanitary conditions using modern facilities and equipment under supervision of a senior staff officer.

Instruction: Instruction includes food preparation, sanitation, safety, storage, and equipment. Methodology includes lecture, discussion and laboratory experiences.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in quantity food preparation and 4 in food sanitation and safety (8/87).

CG-1729-0008

Subsistence Specialist, Large Mess Management

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/83–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage and supervise food service in all phases of Coast Guard operations.

Instruction: Instruction includes menu planning, cost control, inventory control, recordkeeping, cash handling, space requirements and utilization, fast food, and manpower management. Methodology includes lectures, discussion, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in food service management (8/87).

CG-1729-0009

SUBSISTENCE SPECIALIST, INDEPENDENT DUTY

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (77 hours).

Exhibit Dates: 9/83–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage and supervise all phases of Coast Guard dining facilities operations at independent duty stations.

Instruction: Instruction includes menu planning, recordkeeping, cost control, inventory control, cash handling, space requirements and utilization and business correspondence. Methodology includes lecture, discussion, and practical exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in food service management (8/87).

CG-1730-0001

REFRIGERATION AND AIR CONDITIONING

Course Number: RAC-ADV.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (70–71 hours).

Exhibit Dates: 10/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to list and state the types of heat and state of of matter found in pure water at various temperatures; explain the refrigerant pressure temperature relationships; draw the basic refrigeration cycle; identify, state the functions, and locate refrigeration system components; list the safety precautions necessary to service refrigeration equipment; operate, read gages, defrost, and secure a water-cooled refrigeration system; select and use appropriate lead detectors, and find refrigerant leaks; silver solder, flare and swage copper and brass components; add and remove oil; evacuate and charge a system; adjust low and high pressure switches, and perform preventive maintenance procedures.

Instruction: Course is presented through lectures, demonstrations, videos, and laboratory exercises. Topics include types of heat, state of matter, pressure temperature relationships, refrigeration components, safety, system operation, leak detection and repair, adding and removing oil, evacuation, TXV adjustment, low and high pressure switch adjustment, and preventive maintenance.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in refrigeration theory and service principles (8/90).

CG-1731-0001

1. OUTBOARD ENGINES OPERATION AND MAINTENANCE
2. OUTBOARD MOTORS, MOTOR MAINTENANCE AND OVERHAUL, CLASS C

Course Number: *Version 1:* MK-23. *Version 2:* None.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (60–70 hours).

Exhibit Dates: *Version 1:* 10/79–1/88. *Version 2:* 7/65–9/79.

Objectives: To train enlisted personnel to operate, maintain, overhaul, and perform malfunction analysis of outboard and inboard/outboard engines.

Instruction: *Version 1:* Lectures and practical exercises in the disassembly, reassembly, and performance testing of two and four cylinder outboard marine engines and inboard/outboard stern drive units. *Version 2:* Lectures and practical exercises in the disassembly, reassembly, and testing of the two- and four-cylinder inboard/outboard marine engines.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in small engine maintenance and repair (10/79); in the lower-division baccalaureate/associate degree category, 1 semester hour in small engine laboratory (10/79). *Version 2:* In the vocational certificate category, 1 semester hour in small engine repair (6/75); in the lower-division baccalaureate/associate degree category, 1 semester hour in small engine laboratory (6/75).

CG-1731-0002

GAS TURBINE BY CORRESPONDENCE

Course Number: 480-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 5/78–Present.

Objectives: This nonresident course provides basic understanding of gas turbine fundamentals.

Instruction: The course consists of five lessons and a proctored end-of-course examination. Each lesson has onee or more reading assignment followed by a series of questions. After completing the course the student will be able to explain gas turbine components and their functions; explain safety requirements for gas turbine; and perform some preventive and corrective maintenance on gas turbine engines.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in gas turbine engine familiarization and fundamentals (5/79).

CG-2202-0001

OFFICER CANDIDATE SCHOOL (SEAMANSHIP, ORIENTATION, OPERATIONS AND MILITARY INDOCTRINATION)

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: *Version 1:* 17 weeks (811 hours). *Version 2:* 15–18 weeks (420–630 hours).

Exhibit Dates: *Version 1:* 9/81–12/88. *Version 2:* 1/74–8/81.

Objectives: To provide officer candidates with the training prerequisite to active duty as a commissioned officer in the U.S. Coast Guard.

Instruction: *Version 1:* Lectures and practical execises covering Coast Guard orientation, career information, administrative procedures, leadership, seamanship, celestial and electronic navigation, physical education, small arms, military law and safety. For the course after 1/89, see exhibit CG-2202-0005/ *Version 2:* Lectures and practical exercises covering Coast Guard orientation, career information, administrative procedures, leadership, seamanship, electronic navigation, physical education, small arms, military law and safety.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in introduction to law enforcement, 1 in physical fitness and 1 in swimming (7/84); in the upper-division baccalaureate category, 3 semester hours in naval science, 3 in human relations/management (7/84). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in naval science, 3 in human relations/management (12/79).

CG-2202-0002

DIRECT COMMISSION CLASS

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (73 hours).

Exhibit Dates: 8/79–2/89.

Objectives: To provide candidates with a basic orientation to active duty or commissioned office in the Coast Guard.

Instruction: Topics include history of the Coast Guard, mission and scope of the Coast Guard law enforcement program, jurisdiction, service etiquette, officer career information, leadership and administration procedures. See exhibit CG-2202-0003 for the course after 3/89.

Credit Recommendation: Credit is not recommended due to the limited, specialized nature of the course (12/79).

CG-2202-0003

DIRECT COMMISSION OFFICER

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (60–80).

Exhibit Dates: 3/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to serve effectively as a commissioned officer in the U.S. Coast Guard.

Instruction: Includes lectures, discussions, demonstrations, simulations, and practical exercises to the Coast Guard's organization, missions and duties, as well as operational, administrative, leadership and management duties.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (4/89).

CG-2202-0004

RESERVE OFFICER CANDIDATE INDOCTRINATION

Course Number: ROCI.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (60–80 hours).

Exhibit Dates: 3/89–Present.

Learning Outcomes: Upon completion of the course, the student will be able to serve effectively as an officer in the U.S. Coast Guard Selected Reserve.

Instruction: Includes lectures, discussions, and practical exercises in the duties and responsibilities required as officers in the U.S. Coast Guard; included are topics concerning rules, customs, and traditions; the requirement for self-discipline demands an understanding of the importance of honor and integrity in the conduct of an officer, and an understanding of the operations of the Coast Guard.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (4/89).

CG-2202-0005

OFFICER CANDIDATE

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 17 weeks (811 hours).

Exhibit Dates: 1/89–Present.

Learning Outcomes: Upon completion of the course, the student will meet the requirements of and serve effectively as a commissioned officer in the United States Coast Guard.

Instruction: Lectures and practical exercises covering Coast Guard orientation, career information, administrative procedures, leadership, seamanship, celestial and electronic navigation, physical education, small arms, military law and safety.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in human resource management (4/89); in the upper-division baccalaureate category, 3 semester hours in problem solving in management, 3 in naval science (4/89).

CG-2204-0001

20mm Mk 16 Mod 5 Machine Gun and Magazine Sprinklers Operation and Maintenance Class C

Course Number: GM-1.

Location: Reserve Training Center, Yorktown, VA.

Length: 1–2 weeks (56–59 hours).

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to load, operate, and perform maintenance on the 20mm machine gun and also to operate, test, and maintain the magazine sprinkler system.

Instruction: Lectures and practical exercises on the 20mm machine gun and the magazine sprinkler system.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/88).

CG-2204-0002

3"50 Gun Mount Mk 22 Operation and Maintenance Class C

Course Number: GM-3.

Location: Reserve Training Center, Yorktown, VA.

Length: 1–2 weeks (50–55 hours).

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify components, operate all subsystems, perform maintenance, and do inspections on 3"/50 caliber Mk 22 guns and mounts.

Instruction: This course is taught by a combination of lectures, demonstrations, and laboratories. Topics covered include operating, maintenance, and testing procedures on the 3"/50 caliber gun.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (10/88).

CG-2205-0001

Automated Aids to Navigation Maintenance

(Major Aids to Navigation)

Course Number: ANC-1.

Location: *Version 1:* Training Center, Governors Island, NY. *Version 2:* Training Center, Governors Island, NY. *Version 3:* Training Center, Groton, CT.

Length: *Version 1:* 7 weeks (267 hours). *Version 2:* 7 weeks (196 hours). *Version 3:* 6 weeks (165 hours). *Version 4:* 6 weeks (221 hours).

Exhibit Dates: *Version 1:* 10/80–1/89. *Version 2:* 1/77–9/80. *Version 3:* 2/69–12/76. *Version 4:* 7/65–1/69.

Objectives: To train enlisted personnel to operate major light stations, fog signal stations, and lightships.

Instruction: *Version 1:* Lectures and laboratory exercises involving operation, installation and troubleshooting individual equipment, and equipment as part of complete systems. Topics include electronics (OHMS law, semi-conductor devices, basic circuit logic, circuit analysis) oscilloscopes, light emitting equipment, sound emitting equipment, diesel generator sets, battery power systems, radio beacon systems, floating aids to navigation, low visibility detection equipment, and maintenance team supervision. The course is at the block diagram level with troubleshooting to the card or component level. *Version 2:* Covers minor and major navigational aids. *Version 3:* Lectures and practical exercises in basic electricity, minor aid power, major aids, visual signaling, sound signals, minor lights, and introduction to outboard motors. *Version 4:* Lectures and practical exercises in aids to navigation, including function, operation, preventive maintenance, testing, and troubleshooting of major navigational aids equipment, test equipment, problems and hazards training, first aid, and installation, operation and maintenance of major aid apparatus and special testing equipment.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in electromechanical technician or marine electrician (2/83). *Version 2:* In the vocational certificate category, 2 semester hours in basic electricity, 4 in maritime trades (light station operator)(8/78). *Version 3:* In the vocational certificate category, 2 semester hours in basic electricity, 2 in maritime trades (light station operator) (6/75); in the lower-division baccalaureate/associate degree category, 2 semester hours in maritime trades (light station operator) and on the basis of institutional evaluation, 2 in basic electricity (6/75). *Version 4:* In the vocational certificate category, 5 semester hours in marine technology or oceanography, 2 as an elective in automotive technology, 2 as an elective in electrical technology (5/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in marine technology or oceanography, 2 as an elective in automotive technology, 1 as an elective in electrical technology (5/74).

CG-2205-0002

Minor Aids to Navigation

Course Number: None.

Location: *Version 1:* Training Center, Governors Island, NY. *Version 2:* Training Center, Groton, CT.

Length: *Version 1:* 6 weeks (163 hours). *Version 2:* 6 weeks (221 hours).

Exhibit Dates: *Version 1:* 1/69–12/85. *Version 2:* 7/65–12/68.

Objectives: To train enlisted personnel for duty aboard tenders and at light attendant stations.

Instruction: Lectures in piloting and buoy positioning; charts; basic electricity; AC and DC theory and equipment; engine operation and maintenance, including theory, fuels, cooling systems, electrical and mechanical systems, piping and exhaust systems, and engineering safety; minor light and fog equipment; and buoys, minor structures, burning equipment, and power tools operation.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in maritime trade (minor aids to navigation maintenance) (6/75); in the lower-division baccalaureate/associate degree category, 2 semester hours in maritime trade (minor aids to navigation maintenance) (6/75). *Version 2:* In the vocational certificate category, 2 semester hours as an elective in electrical technology, 2 as an elective in automotive technology, and 5 in marine technology or oceanography (5/74); in the lower-division baccalaureate/associate degree category, 1 semester hour as an elective in electrical technology, 1 as an elective in automotive technology, and 3 in marine technology or oceanography (5/74).

CG-2205-0003

Aids to Navigation School (Short Course for Officers)

Course Number: None.

Location: Training Station, Groton, CT.

Length: 3 weeks (120 hours).

Exhibit Dates: 4/54–12/68.

Objectives: To train officers to operate standard aids to navigation.

Instruction: Lectures in aids to navigation significance, battery-operated lights, acetylene-operated lights, light station management, radiobeacon operation, diesel generators operation and maintenance, emergency safety measures, fog signals, buoy handling, repair shop management, field inspection, and light attendant duties.

Credit Recommendation: In the vocational certificate category, 2 semester hours in navigational aids (5/74).

CG-2205-0004

Officer Candidate School

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 17 weeks (480 hours).

Exhibit Dates: 2/61–12/68.

Objectives: To provide candidates with the training prerequisite to active duty as commissioned officers in the Coast Guard.

Instruction: Combat information center; Coast Guard orientation; communications; damage control—atomic, biological, and chemical warfare; gunnery; navigation; seamanship; training vessel; drill; physical education; military law; safety and first aid.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in advanced naval science (12/68).

CG-2205-0005

General Service Indoctrination School

Course Number: None.

Location: Coast Guard Academy, New London, CT; Reserve Training Center, Yorktown, VA.

Length: 12 weeks (340 hours).

Exhibit Dates: 2/61–12/68.

Objectives: To train officers commissioned from the U.S. Merchant Marine in the fundamentals necessary for performance of duty as commissioned officers in the Coast Guard.

Instruction: Coast Guard orientation; communications; rules of the road; navigation; combat information center; gunnery; antisubmarine warfare; damage control, including atomic, biological, and chemical warfare; Coast Guard engineering.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in advanced naval science (12/68).

CG-2205-0006

Radiobeacon Operation

Course Number: None.

Location: Aids to Navigation School, Governors Island, NY.

Length: 2 weeks (58 hours).

Exhibit Dates: 7/65-12/68.

Objectives: To train personnel in the operation, watchstanding, reporting, maintenance and minor repair of radiobeacon equipment.

Instruction: Lectures and practical exercises in the operation, monitoring, maintenance, and minor repair of an unspecified radiobeacon.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (6/75).

CG-2205-0007

Small Arms Instructor

Course Number: None.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (60 hours).

Exhibit Dates: 10/73-2/70.

Objectives: To train enlisted personnel to teach pistol and rifle marksmanship and to prepare them to be range officers and coaches, with emphasis on the caliber .45 automatic pistol and M-16 rifle.

Instruction: Lectures and practical exercises in teaching hand gun and rifle marksmanship and the management of firing ranges.

Credit Recommendation: Credit is not recommended because of the military nature of the course (6/75).

CG-2205-0008

Officers Advanced Aids to Navigation
(Aids to Navigation Officer Advanced Class C)

Course Number: ANC-5.

Location: Aids to Navigation School, Governors Island, NY.

Length: 2 weeks (60-64 hours).

Exhibit Dates: *Version 1:* 8/80-Present. *Version 2:* 4/66-7/80.

Objectives: To provide personnel with advanced training in signals engineering and administration.

Instruction: Lectures and practical exercises in signals arrangements, system evaluation, administration, and legal aspects of aids-to-navigation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in basic seamanship (2/83). *Version 2:* Credit is not recommended because of the limited specialized nature of the course (8/78).

CG-2205-0009

Officers Basic Aids to Navigation
(Officers Basic Aids to Navigation, Class O)
(Aids to Navigation Officer Basic)

Course Number: ANC-4.

Location: Aids to Navigation School, Governors Island, NY; Coast Guard Training Center, Groton, CT.

Length: *Version 1:* 3 weeks (86 hours). *Version 2:* 4 weeks (120-137 hours).

Exhibit Dates: *Version 1:* 5/75-1/85. *Version 2:* 4/66-4/75.

Objectives: Training in the administration, evaluation, maintenance, and operation of the federal system of Aids to Navigation.

Instruction: *Version 1:* Students are familarized with batteries, various lamps, bouys, reflections, and minor navigational aid structures. Students learn to use the devices as aids to navigation. *Version 2:* Lectures and practical exercises in minor aids, minor aid power, major aids, major aid power, sound and visual signaling, major structures, the day mark, the buoy tender, safety, and administration.

Credit Recommendation: *Version 1:* No credit is recommended due to the diversity of the training (8/78). *Version 2:* In the vocational certificate category, 1 semester hour in maritime trades (navigation aid) (6/75); in the lower-division baccalaureate/associate degree category, 1 semester hour in maritime trades (navigation aids) (6/75).

CG-2205-0011

Basic Military Training
(Recruit Training)

Course Number: None.

Location: Training Center, Cape May, NJ; Training Center, Alameda, CA.

Length: 8 weeks (240-320 hours).

Exhibit Dates: 1/78-Present.

Objectives: To provide training for personnel with no previous military experience.

Instruction: Course acquaints students with missions and operations of the Coast Guard and opportunities for profrssional growth; teaches basic seamanship skills; motivates the individual to regard unit goals as her/his own and to develop a sense of pride, self-discipline, self-confidence and a sense of the need for teamwork to accomplish a mission. This is achieved by formal classroom training as well as by creating a living and working environment with group living, standing watches, work detail assignments, discipline standards, and such routine activities as personnel and barracks inspections and marching. Course includes drug awareness, first aid, safety and survival. Also included is counseling and classification, civil rights, hygiene, physical fitness, career information, boat seamanship and deck seamanship.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in beginning swimming, 1 in personal fitness/conditioning, 2 in first aid and safety (11/79).

CG-2205-0012

Damage Control and Stability (DCS) by Correspondence

Course Number: 0480.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 3/85-5/86.

Objectives: To provide future commanding officers and executive officers of Coast Guard cutters with refresher training in damage control and stability.

Instruction: Course is designed to provide the basic theory of ship stability. This includes the effects of weights and hull stress on a vessel's stability. The damage control portion of the course provides the officer with a general overview of shipboard damage control operations and procedures. The specific duties of the damage control assistant and engineering officer are delineated. The course requires knowledge of basic physics, hydrodynamics, mathematical calculations and problem solving. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced nautical science and 2 in marine transportation (5/85).

CG-2205-0013

Coast Guard Orientation by Correspondence

Course Number: 404-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 104 weeks.

Exhibit Dates: 1/85-Present.

Objectives: To provide indoctrination to reserve officers and enlisted personnel in lieu of basic training.

Instruction: Course covers orientation to the Coast Guard. Topics include history and mission, organization, discipline, uniforms and awards, watches and routines, ship construction, seamanship, rules of the road, general drills, damage control and firefighting, survival, first aid, safety, maintenance, security, ships and aircraft, customs and ceremonies, rates and ratings, career information, boating safety, law enforcement and administration. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/85).

CG-2205-0014

Military Requirements (MRN-E-3) for E3 by Correspondence

Course Number: 455, 400.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 9/81-4/88.

Objectives: To provide necessary military requirements for promotion to E-3 or E-4.

Instruction: Topics include security regulations, marlinspike seamanship, career planning, first aid, safety and survival, firefighting safety, nuclear, biological and chemical warfare defense, environmental health hazards, surface preservation, color and coating manual, career information, Coast Guard organization, administration and supervision, boarding and radio telephone. Students are required to successfully complete a proctored end-of-course exam.

Credit Recommendation: In the vocational certificate category, 1 semester hour in first aid and marine safety (5/85).

CG-2205-0015

Radarman First Class (RD1) by Correspondence

Course Number: 139-6.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 8/82-10/86.

Objectives: To provide enlisted personnel with training to perform the duties of radarman.

Instruction: Course covers essential safety and first aid procedures, combat information center organization and surface operations, antisubmarine warfare and air control, naval tactical data systems, special plots and electronic warfare, navigation and special operations and communications. Students are required to successfully complete a proctored end-of-course evaluation. Students may supplement course with hands-on training on the job.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in advanced navigation (tactical) (5/85).

CG-2205-0016

Radarman Second Class (RD2) by Correspondence

Course Number: 239-8.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 4/85–6/87.

Objectives: To provide personnel with training to perform the duties of radarman as set forth in the Coast Guard qualifications manual.

Instruction: The course covers combat information center operations, radar fundamentals, communications, administration and basic search and rescue. Emphasis is placed on navigation.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced navigation (tactical) (3/85).

CG-2205-0017

Radarman Third Class (RD3) by Correspondence

Course Number: 339-7.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 6/82–Present.

Objectives: To provide training to radarmen in the use of detection equipment, communications, search and rescue procedures, rules of the road and electronic warfare.

Instruction: Course includes radar fundamentals and radar scope interpretation, principles and operation of radio direction finders, dead reckoning techniques, antisubmarine warfare operations, use of charts, use of maneuvering board, search and rescue procedures and navigation rules. Also includes communication procedures, use of publications, and electronic warfare equipment and operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic navigation (5/85).

CG-2205-0018

Weapons Officer (WEPOFF) by Correspondence

Course Number: 406-3.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 11/81–Present.

Objectives: To provide officers with the basic ordnance knowledge to effectively administer the weapons department on board a Coast Guard cutter.

Instruction: Training includes weapons administration, weapon systems, weapons training, applied gunnery and administration. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the vocational certificate category, 1 semester hour in office administration (5/85).

CG-2205-0019

Coast Guard Orientation Officers

Course Number: 405-1.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: 104 weeks maximum.

Exhibit Dates: 8/84–Present.

Objectives: To present a general overview of basic Coast Guard knowledge required by selected reserve officer candidates.

Instruction: Course consists of information on Coast Guard grooming standards, mission of the Coast Guard and reserve, shore units, universal and zulutime, personnel records, the Coast Guard filing system, correspondence course ordering, and Coast Guard reserve terminology. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (5/85).

CG-2205-0020

Officer In Charge/Executive Petty Officer

Course Number: None.

Location: Coast Guard Training Center, Petaluma, CA.

Length: 2 weeks (77 hours).

Exhibit Dates: 3/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to manage and administer a small operating station or unit, ashore or afloat.

Instruction: Instruction includes small unit operation and management with emphasis on logistical and physical plant administration, budget planning, written and oral communication to individuals and groups, and human relations management. Instructional methods include lecture, discussion, practical exercises, role playing, and case studies.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in small business management (8/87).

CG-2205-0021

Reserve Small Boat Coxswain ADT

Course Number: SBX.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (60–80 hours).

Exhibit Dates: 2/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to demonstrate proficiency (daytime) in approximately 50% of the tasks necessary to comply with certification requirements or recertification requirements as required by CONSTINST M16114.11, VOC II.

Instruction: Lectures and practical exercises in small boat familiarization, small boat handling, small boat piloting and navigation, towing and salvage, rescue and delivery, search and rescue.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in piloting and navigation (4/89).

CG-2205-0022

Reserve Boatswain's Mate Basic ADT

Course Number: BM BAS.

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks (67 hours).

Exhibit Dates: 10/89–Present.

Learning Outcomes: Upon completion of the course, the student understand and be able to perform all basic boatswain mate duties, stressing those skills that require close supervision and hands-on training.

Instruction: Lectures and practical exercises including introduction to boatswain mate duties and responsibilities, marlinspike seamanship, use and principles of tackle, care of canvas and leather, lateral buoyage system, chart interpretation and basic piloting, fire fighting and salvage pump operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introductory basic seamanship (4/89).

CG-2205-0023

Radarman Second Class (RD2) by Correspondence

Course Number: 239-9.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 7/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to identify procedures for training personnel for plotting, standing watch, and ordering supplies; explain a communications plan; indentify procedures to prepare navigation charts, search and rescue plans, and preventive maintenance plans; identify procedures to solve advanced maneuvering board problems, tactical control problems, electronic warfare problems, and air control problems; explain the operation of electronic warfare equipment; explain the procedures used in radar interpretation.

Instruction: Major topics covered are administration, tactical communications, radar navigation, search and rescue techniques, preventive maintenance, operational techniques, detection equipment characteristics, and radar interpretation. An emphasis is placed on radar interpretation and navigation skills to support combat information center operations. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in radar interpretation techniques (6/90).

CG-2205-0024

Damage Control and Stability (DCS) By Correspondence

Course Number: 0480-2.

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 52 weeks.

Exhibit Dates: 6/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to apply the basic principles of naval architecture to calculate a vessel's stability under a variety of conditions, and identify the duties and responsibilities of shipboard personnel in the damage control organization both in port and underway.

Instruction: Topics include vessel stability and damage control. Training is provided in a non-resident, self-study format. Students are required to successfully complete a proctored end-of-course examination.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in technical naval architecture OR 2 in nautical science (ship stability) (6/90).

CG-2205-0025

Aids to Navigation Positioning

Course Number: ANC-AP.

Location: Reserve Training Center, Yorktown, VA.

Length: 1 week (52-57 hours).

Exhibit Dates: 10/89-Present.

Learning Outcomes: Upon completion of the course, the student shall be able to perform standard Coast Guard aids to navigation positioning operations. The student will be able to adjust and use survey sextants; determine the position of aids to navigation using Loran-C, radar ranges, gyro bearings, and horizontal sextant angles; to complete a gradient diagram workform using hand calculations; to use a portable computer and a Cap-II program tape to establish aid and object positioning files. The student shall be able to transfer programs and data files between the standard work station (with Cap-II program installed) and portable computer; to determine the accuracy classification for an aid to navigation and record this data in accordance with current instructions; to construct a positioning grid and a positioning template following Coast Guard procedures; to troubleshoot faulty positioning grids following instructions in the Naton School positioning grid; to evaluate an aids position when at short stay and when not at short stay; and the student will be able to complete an aid positioning record (CG-5216) in accordance with the latest Coast Guard instruction.

Instruction: Course is conducted through classroom lectures and practical exercises covering the following: adjusting the sextant; measuring sextant angles; determining aids position using Loran-C, radar, gyro bearings, horizontal sextant angles; introduction to the Cap-II portable computer; use of the Cap-II portable computer and transfering Cap-II information; aids classification accuracy; construction of a position grid, and of a template; identification of errors in templates; and completion of an aids position record.

Credit Recommendation: In the vocational certificate category, 1 semester hour in seamanship/navigation (6/90).

CG-2205-0026

QUARTERMASTER FIRST CLASS BY CORRESPONDENCE

Course Number: 0137-5

Location: Coast Guard Institute, Oklahoma City, OK.

Length: Maximum 78 weeks.

Exhibit Dates: 9/85-Present.

Learning Outcomes: Upon completion of the course, the student will be able to define the responsibilities and duties of the officer of the deck, executive officer, and navigator; define the various effects and principles involved in conning a vessel in either restricted or open waters; distinguish between the magnetic and gyro compasses; define the principles of and procedures for degaussing; define the difference between permanent and induced magnetism; define the effect and corrective actions for deviation; determine a vessel's position using bearings, charts, instruments, and tables; anchor a vessel in an assigned berth; prepare a chart for use in piloting; calibrate and operate a radio direction finder (RDF); operate and use information obtained from the Loran-C system; operate a radar system; maintain and use a marine sextant; complete a solution for a celestial observation; define the responsibilities and duties for search and rescue (SAR) operations; define the responsibilities and duties of the on-scene commander of an SAR operation.

Instruction: Topics include ship conning, compasses and compass systems, piloting and dead reckoning, navigation by electronic equipment, celestial navigation, and basic search and rescue. Proctored final examination is required.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in celestial navigation and 2 in coastwise navigation (6/90).

CG-2205-0027

SMALL BOAT CREWMEMBER
(Reserve Small Boat Crewmember)

Course Number: SBC

Location: Reserve Training Center, Yorktown, VA.

Length: 2 weeks.

Exhibit Dates: 1/87-Present.

Learning Outcomes: Upon completion of the course, the student will be able to operate small boats according to the procedures outlined in rules of the road; identify navigational aids; moor and tow small boats; practice basic seamanship, communication, fire drills, and survival skills.

Instruction: Lectures, including audio visual aids, and practical exercises both dockside and underway are methods of presentation. Students will use fathometers, assist coxswain with pump, stand towing watch, observe fire fighting equipment, and observe use of life raft.

Credit Recommendation: In the vocational certificate category, 2 semester hours in seamanship, 2 in small boat handling (6/90).

Course Exhibits

DD

DD-0326-0001

ARMED FORCES STAFF COLLEGE

Course Number: None.

Location: National Defense University, Washington, DC; Armed Forces Staff College, Norfolk, VA.

Length: *Version 1:* 21-22 weeks (633-735 hours). *Version 2:* 21 weeks (634 hours). *Version 3:* 21 weeks (548-642 hours).

Exhibit Dates: *Version 1:* 8/83-Present. *Version 2:* 6/73-7/83. *Version 3:* 7/54-5/73.

Objectives: To train officers in joint and combined military organization, planning, and operations, and in related aspects of national and international security.

Instruction: *Version 1:* Lectures, readings, and student papers and discussions in joint and combined military organization, planning, and operations and in related aspects of national and international security. Materials are divided into four major topic areas.(1) U.S. national security studies includes U.S. national strategy formulation and execution; domestic and external factors influencing and constraining U.S. national security policy making; geopolitics, and introduction to nuclear strategic theory and to arms control and disarmament. A political-military gaming exercise is required to help the student apply theory to the task of formulating and implementing security policy in a crisis situation. (2) Principles of managerial problem solving and leadership includes managerial planning techniques, computerized information system utilization, problem solving skills, and general leadership/professional skills.(3) Communicative skills include practical experience in oral communication for both large and small groups and written communication in the form of short briefing and summary papers as well as a major research paper.(4) Defense organization includes Army, Navy, Air Force, Marine and Department of Defense organization and operation. *Version 2:* Lectures, readings, and student research and discussions in joint and combined military organization, planning, and operations, and in related aspects of national and international security. Materials are divided into seven course blocks as follows: (1) Administration and Government Organization and Development, including national security policy making, U.S. diplomatic history, and current intelligence procedures; (2) U.S. Military Forces, including organization, personnel management, logistics, warfare capabilities (air, sea, submarine, and amphibious), strategic operations, tactics, and global operations; (3) Organization and Command, including various levels and types of command; (4) Defense Management, including defense planning, programming, economic analysis, probability, program management, analysis techniques, basic computer techniques and programming, and personnel management; (5) Planning and Procedures, including psychological operations; civil affairs; warfare planning and special operations; planning for each armed service; military communications and electronics; nuclear, chemical, and biological planning considerations; general war planning and effects, foreign internal defense planning; insurgency and counterinsurgency; insurgency in Colombia; and planning for limited war; (6) Environment and Strategy, including public affairs, arms control and disarmament; role of the press in the U.S. society; strength, weaknesses, objectives, and foreign policies of mainland China, U.S.S.R., South Asia, Latin America, Africa, Middle East, and Japan; future war and military operations; technologies of the future and their impact on military operations and development; national strategy formulation and execution; political, economic, psychological, and military aspects of national strategy; role of diplomacy and war in international relations; race relations and dissent, drug abuse, and the influence of social change in the U.S. military; and communicative arts, including development of reading, writing, analysis, and abstracting skills. *Version 3:* Lectures, readings, and student research and discussions in joint and combined military organization, planning, and operations, and in related aspects of national and international security, divided into five course blocks, as follows: (1) Orientation, including communist ideology; U.S. Army organization, operation, logistics, and combat developments; U.S. Navy organization and logistics; Navy air, submarine, antisubmarine and amphibious warfare; Air Force organization and operations; aerospace power and logistics; strategic and tactical air operations and systems development; Department of Defense organization and operation; role of systems analysis and management; automatic data processing orientation; national security policy making; and public affairs. (2) General Studies, including organization and command relationships; various command levels and geographical areas; joint planning processes and operations; intelligence estimates; military capabilities; strengths, and weaknesses, foreign policies of the U.S.S.R., communist China, South Asia, the Far East, North Africa and the Middle East, Latin America, and South Africa; various intelligence agencies; communications and electronics; telecommunications; basic logistic planning computations; logistic support under nuclear warfare conditions; base development; sea transportation; global operations; nuclear, chemical, and biological warfare planning and policy; civil affairs; counterinsurgency and counterinsurgency planning and activities; insurgency, unconventional warfare, psychological operations; future U.S. military operations; future war possibilities; future research and engineering; national strategy; political, economic; psychological, and military aspects of national security, and the role of diplomacy and war in international relations. (3) Demonstrations, including review of equipment, command control activities, state and city government facilities, and community relations. (4) Applications and Joint and Combined Planning, including planning for limited and general war. (5) The Joint Chiefs of Staff, including appraisals of national and international security; current and national policies and concepts; nuclear weapons orientation; U.S. history, and U.S. political parties and state and local governments.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in principles of managerial problem solving, 3 in communicative skills, 6 in U.S. national security studies and 3 in defense organization (7/87). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in principles and problems of management, 3 in international relations (Current Problems in World Politics), 3 in contemporary U.S. military history and national security policy, 3 in communicative arts (8/74); in the graduate degree category, 3 semester hours in management and systems analysis (8/74). Recommendations of credit are maximum figures. The amount actually accepted for transfer depends upon the applicant's future academic goals and regulations of the admitting institution on transfer credit. *Version 3:* In the upper-division baccalaureate category, 6 semester hours in business administration, 6 in political science—including international relations—3 in recent military history (8/74).

DD-0327-0001

DEFENSE SECURITY ASSISTANCE
MANAGEMENT OVERSEAS
(Core/Overseas)

Course Number: SAM-0.

Location: Defense Institute of Security Assistance, Wright-Patterson AFB, OH.

Length: 4-5 weeks (114 hours).

Exhibit Dates: 10/78-Present.

Objectives: To provide Department of Defense overseas representatives with the policies and procedures governing their conduct of operation overseas. Security assistance management is discussed from the national policy level through implementation by responsible agencies.

Instruction: This course covers the management of military sales to foreign countries as it relates to planning programming budget systems (PPBS), foreign policy, legal status overseas, physical security, cross cultural communications, government contracting, export controls and government procurement management. The method of instruction includes lecture, real-life case studies, simulator exercises and interaction with practitioners in the field.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in international business (11/78).

DD-0419-0001

DEFENSE PRESERVATION AND
INTERMEDIATE PROTECTION

Course Number: *All Versions:* 822-F1(JT). *Version 1:* 8B-F1(JT).

Location: School of Military Packaging Technology, Aberdeen Proving Ground, MD; Joint Military Packaging Training Center, Aberdeen Proving Ground, MD; Selected on-site locations, Continental United States.

Length: 2 weeks (70-76 hours).

Exhibit Dates: *Version 1:* 4/81-Present. *Version 2:* 5/70-3/81.

Objectives: To train commissioned officers, enlisted personnel, and civilian personnel in the techniques of cleaning, drying, preserving, and packing military supplies and equipment.

Instruction: *Version 1:* Lectures and practical exercises on preservation and intermediate protection of military supplies and equipment, including packing specifications, cleaning, preservatives, sprayable and strippable films, controlled humidity, packaging inspection, and packaging costs and documentation. *Version 2:* Lectures and practical exercises on preservation and intermediate protection of military supplies and equipment, including packing specifications, cleaning, preservatives, sprayable and strippable films, controlled humidity, packaging inspection, preparation of retrograde material for shipment, and packaging costs and documentation.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in the preservation of equipment and supplies (2/90). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in the transportation, preservation, and protection of supplies (7/74).

DD-0419-0002

Defense Packing and Unitization

Course Number: 8B-F2(JT); 822-F2(JT).

Location: School of Military Packaging Technology, Aberdeen Proving Ground, MD; Joint Military Packaging Training Center, Aberdeen Proving Ground, MD; Selected on site locations, United States and overseas.

Length: 2 weeks (70-76 hours).

Exhibit Dates: 4/70-Present.

Objectives: To train personnel in the packing, marking, and loading of military supplies and equipment for storage and shipment.

Instruction: Lectures and practical exercises in the packing, marking, and loading of military supplies and equipment for storage and shipment, including introduction to packing and containerization, crate design, cargo unitization and containerization, cushioning and blocking, bracing and anchoring, loading for shipment, utilization of packing lines, parcel shipments, and packing cost reduction. After July 1983 the course was conducted off-site and overseas.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in transportation, regulations, packing and unitization (3/90).

DD-0419-0003

Defense Packaging of Hazardous Materials for Transportation

Course Number: 8B-F7(JT); 822-F7(JT).

Location: School of Military Packaging Technology, Aberdeen Proving Ground, MD; Selected On-site locations, U.S.; Joint Military Packaging Training Center, Aberdeen Proving Ground, MD.

Length: 1-2 weeks (50-70 hours).

Exhibit Dates: 3/80-Present.

Objectives: To train military personnel, civilian government employees, and qualified members of industry in the current requirements and procedures in the preparation of hazardous materials for transportation, including marking, certification, handling, and storage, through approved government and civilian methods and techniques.

Instruction: Use of Department of Defense (DOD); Department of Transportation (DOT); Air Force Regulation (71-4); International Air Transport Association Restricted Articles Regulations (IATA); Intergovernmental Maritime Consultative Organization (IMCO); and Official Air Transport Restricted Articles Tarriff and Circular No. 6-D regulatory documents for the transportation of hazardous materials by rail, motor, air and water. Comparison of DOD, DOT, IATA, and IMCO containers authorized for use in packaging hazardous materials classifications and labels; IMCO classifications and labeling requirements; MIL-STD-129 requirements for hazardous and other materials requiring special handling data/certification on DD Form 1387-2 label.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in packaging of hazardous materials for transportation (5/90).

DD-0419-0004

Defense Basic Preservation and Packing

Course Number: 822-F13(JT).

Location: School of Military Packaging Technology, Aberdeen Proving Ground, MD; Joint Military Packaging Training Center, Aberdeen Proving Ground, MD.

Length: 2 weeks (62-70 hours).

Exhibit Dates: 7/80-Present.

Objectives: To train enlisted personnel and civilian employees of the Army, Navy, Air Force, Marine Corps and the Defense Logistics Agency in basic preservation and packing principles for new and repairable material for storage or shipment.

Instruction: This course, designed for operational enlisted and civilian personnel, consists of introduction to military and industrial preservation, corrosion control, cleaning and drying, preservatives, preservation materials and equipment, preservation methods, introduction to military and industrial packing, special and general purpose shipping container, cushioning, blocking, bracing, weatherproofing, cargo utilization, marking and labeling, and packing for shipment. Forty-two percent of the course is devoted to conference time, 45 percent to demonstrations and student practice in the areas of preservation and packing, and 13 percent to examinations plus nonacademic areas.

Credit Recommendation: In the vocational certificate category, 1 semester hour in basic preservation, packing, and protection of new and repairable equipment (1/90).

DD-0419-0005

Defense Packaging Management Training

Course Number: 8B-F26(JT).

Location: School of Military Packaging Technology, Aberdeen Proving Ground, MD; Joint Military Packaging Training Center, Aberdeen Proving Ground, MD.

Length: *Version 1:* 9 weeks (318-347 hours). *Version 2:* 8 weeks (284 hours).

Exhibit Dates: *Version 1:* 2/82-Present. *Version 2:* 3/80-1/82.

Objectives: To train military and civilian personnel in the techniques and skills required to become packaging specialists and manage packaging programs for the military services and Defense Logistic Agency (DLA).

Instruction: *All Versions:* Philosophies, concepts, and practices of military packaging and packaging management. Lecture/conferences and practical instruction are provided in preservation and intermediate protection, packing and unitization, marking for shipment and storage, packaging of hazardous materials for transportation, foam-in-place packaging, and packaging design. Guest speakers and field training trips are part of regular classroom instruction. Students will prepare a research paper. *Version 1:* Course includes packaging design.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hour in preservation of equipment and supplies, 1 in transportation regulation, packing and unitization including marking for shipment, storage and and foam-in-place packaging, 2 in packaging of hazardous materials for transportation, 1 in packaging design and 1 in packaging management to include field training (6/86). *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in the preservation of equipment and supplies, 1 in transportation regulation, packing and unitization including marking for shipment, storage, and foam-in-place packaging, 2 in packaging of hazardous materials for transportation, 1 in packaging management to include field training (4/90).

DD-0419-0006

Defense Packaging Design

Course Number: 8B-F16(JT).

Location: School of Military Packaging Technology, Aberdeen Proving Ground, MD; Joint Military Packaging Training Center, Aberdeen Proving Ground, MD.

Length: 2 weeks (70-76 hours).

Exhibit Dates: 3/80-Present.

Objectives: To train military and civilian personnel of the Department of Defense in approved policies, methods and techniques of packaging design, handling and shipment with emphasis on selection of packing and cushioning materials, to provide adequate protection to items of supply at a minimum cost.

Instruction: Identifying item characteristics; transportability; deterioration of materials; the natural and transportation environment; container design and selection; packaging documentation; testing and safety.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in packaging design (1/90).

Related Occupation Codes: 71Q.

DD-0504-0003

Editors
(Military Editor)
(Newspaper Editor)

Course Number: 570-F2; A-570-0013; 5AZA79150; A1143D1(43D).

Location: Defense Information School, Ft. Benjamin Harrison, IN.

Length: Self-paced 3 weeks (118–132 hours).

Exhibit Dates: 7/68–9/89.

Objectives: To provide additional print journalism instruction to personnel assigned as editors of military newspapers and magazines.

Instruction: Beginning in 1976, course becomes a highly individualized, self-paced program consisting of pretest, group-paced, self-paced, final performance test and newspaper improvement project. Subject areas include photojournalism, print journalism and public affairs. Lectures and practical experience cover all phases of newspaper production, culminating with a 4-page service newspaper or, beginning in 1976, a tabloid size page of a hypothetical military newspaper. Workshop includes communications law, Department of Defense policy on release of information, newsgathering, writing, editing, style, deadlines, photo selection and editing, and layout and page makeup.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in newspaper production (journalism) (10/86).

DD-0504-0004

Information Enlisted
(Information Specialist)

Course Number: 28-F-1; 28-R-701.1; 28-R-703.1; 28-R-703.2.

Location: Defense Information School, Ft. Benjamin Harrison, IN; Defense Information School, Ft. Slocum, NY.

Length: 8–10 weeks (278–345 hours).

Exhibit Dates: 11/56–12/68.

Objectives: To provide enlisted personnel with a working knowledge in the selection, evaluation, preparation, and dissemination of Army information through available media of communications.

Instruction: Policy and plans, including public relations philosophy and practice, and information aspects of unusual incidents, stressing the case-study approach; applied journalism, with performance skills in all tasks required to publish a service newspaper; research communications, stressing preparation of the information specialist for public speaking, speech writing, briefings, and group discussions; radio and television, including training in writing, announcing, and production staff functions; internal relations and government, stressing the U.S. international position in terms of world patterns.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in mass media (12/73); in the upper-division baccalaureate category, 2 semester hours in social studies, 1 in oral communications, and credit in journalism on the basis of institutional evaluation (12/68).

DD-0504-0005

Troop Information and Education Enlisted

Course Number: 28-F-1.

Location: Defense Information School, Ft. Slocum, NY.

Length: 8 weeks (352 hours).

DD-0602-0001

Albanian Basic

Course Number: None.
Location: Army Language School, Presidio of Monterey, CA.
Length: 46 weeks.
Exhibit Dates: 1/54–12/56.
Objectives: To train officers and enlisted personnel in the interpretation or translation of a foreign language, and to provide basic military, geographic, economic, historical, and political information about the country or area in which the language is spoken. (These area studies are taught in the foreign language.)
Instruction: Lectures, discussions, and oral drills on the language of a foreign country and basic military, geographic, economic, historical, and political information about the country in which the language is spoken. While this course is listed as Basic, it should be understood that this is the terminology used by the armed forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) The least difficult languages for English speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0002

Albanian Basic

Course Number: None.
Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.
Length: 47 weeks.
Exhibit Dates: 1/57–12/80.
Objectives: To train military personnel in the interpretation and translation of the designated language and to provide basic military, geographic, economic, historical, and political information about the country, and/or area, in which the language is spoken. (These area studies are taught in the foreign language.)
Instruction: Lectures, discussions, and oral drills in the interpretation and translation of the designated language, and additional training in the basic military, geographic, economic, historical, and political information about the country in which the language is spoken. NOTE: While this course is listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 21 semester hours (8/74).

DD-0602-0012

MALAY BASIC
(Indonesian-Malay Basic)

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* 30–32 weeks (870 hours). *Version 2:* 36–47 weeks.

Exhibit Dates: *Version 1:* 1/78–9/86. *Version 2:* 1/57–12/77.

Objectives: To enable students to develop operational oral and written communicative skills in the Malay language.

Instruction: *Version 1:* The course utilizes 12 volumes of a specially prepared Indonesian Malay text series as well as additional Malay components which include oral and written materials. *Version 2:* Lectures, discussions, and oral drills in the interpretation and translation of the Malay, and additional training in the basic military, geographic, economic, historical, and political information about the country in which the language is spoken.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 9 semester hours for beginning Malay and 6 for intermediate Malay (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 21 in Indonesian-Malay for the 47 week course; 18 in Malay for the 36 week course (8/74).

DD-0602-0013

VIETNAMESE—HANOI BASIC

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* 36–42 weeks. *Version 2:* 47 weeks.

Exhibit Dates: *Version 1:* 1/77–9/84. *Version 2:* 1/57–12/76.

Objectives: To train military personnel in an intensive Vietnamese language course covering both oral and written components that aim to develop operational communicative skills.

Instruction: *Version 1:* Lectures, discussion, oral drills and language laboratory work incorporating oral and written materials especially prepared for this course which aims to develop operational language skills. Extensive treatment of military/civil government situations is covered during the later phases of the program. *Version 2:* Lectures, discussions, and oral drills in the interpretation and translation of the Vietnamese language, and additional training in the basic military, geographic, economic, historical, and political information about the country in which the language is spoken.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 12 semester hours at the beginning level and 9 ranging from lower intermediate to the upper intermediate in the 36–42 week Vietnamese-Hanoi course (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper division, 21 semester hours in Vietnamese-Hanoi dialect for the 47-week (8/74).

DD-0602-0014

BURMESE BASIC

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks.

Exhibit Dates: 1/57–6/65.

Objectives: To train military personnel in the interpretation and translation of the designated language and to provide basic military, geographic, economic, historical, and political information about the country, and/or area, in which the language is spoken. (These area studies are taught in the foreign language.)

Instruction: Lectures, discussions, and oral drills in the interpretation and translation of the designated language, and additional training in the basic military, geographic, economic, historical, and political information about the country in which the language is spoken. NOTE: While this course is listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 21 semester hours (2/81).

DD-0602-0015

MODERN STANDARD ARABIC AURAL COMPREHENSION
(Arabic Aural Comprehension)

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 46 weeks (1310–1380 hours).

Exhibit Dates: 1/81–7/81.

Objectives: An intensive course of study in the designated language emphasizing listening comprehension, transcription and translation.

Instruction: Instruction emphasizes aural comprehension including general comprehension. Reading, speaking and writing are also covered in descending order of emphasis. Emphasis is on transcription and translation of recorded texts and dialogues. Comprehension skills in Egyptian or Syrian dialects, combined with continued oral training in Modern Standard Arabic is provided during the last phase of the course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 16 semester hours in aural-oral production, 4 in four-skill practice and 4 in aural Egyptian or Syrian dialect (3/81).

DD-0602-0016

GERMAN AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: *Version 1:* 32 weeks (960 hours). *Version 2:* 24 weeks (690 hours).

Exhibit Dates: *Version 1:* 10/79–Present. *Version 2:* 1/54–9/79.

Objectives: To be conversant in everyday German, with special emphasis given to listening comprehension and reading translation.

Instruction: *Version 1:* Class activities focus on dialog adaptation, memorization, pronunciation practice. Grammar rules are presented in conjunction with oral drill and pattern exercises. The course puts great emphasis on listening comprehension using the language laboratory to develop this aural skill. *Version 2:* The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964. Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 10 semester hours in elements of first year German and 6 in second year German for the 32-week German course (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 12 in German for the 24 week course (3/74).

DD-0602-0017

RUSSIAN AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* See NOTE below: 47 weeks (1380 hours). *Version 2:* 23–37 weeks.

Exhibit Dates: *Version 1:* 10/78–7/81. *Version 2:* 1/54–9/78.

Objectives: An intensive language course designed to develop basic proficiency in all four language skills with special emphasis on aural comprehension and transcription skills.

Instruction: *Version 1:* Through the use of dialog manipulation, oral practice, grammar presentation, structural drills and reading and translation the student develops not only language proficiency, but also receives an introduction to selected areas of Russian and Soviet culture, history, geography and military affairs. Special attention is devoted to developing listening skills and transcription techniques. *Version 2:* The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously) Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken languageis emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 6 semester hours in elementary Russian, 6 in intermediate Russian; in the upper-division baccalaureate category, 9 semester hours for advanced Russian (conversation/reading) (3/81). NOTE: Prior to 1981 the Air Force version of this course was 37 weeks in length. For Air Force personnel completing the 37 week course the 37 week course between 1978 and 1981 apply the credit recommended in version 2. *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours for the 23- or 24 week course, 18 for the 37 week Russian course (8/74).

DD-0602-0018

Albanian Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (690-1380 hours).

Exhibit Dates: 1/81-4/85.

Objectives: Intensive basic instruction in the four skills: elements of aural comprehension, speaking, reading and writing. Introduction of the most frequent structural features through cultural/situational exercises.

Instruction: Audio-lingual small-group instruction incorporating structural and vocabulary/pronunciation drills. Grammar and vocabulary are introduced through dialogues, reading/translation exercises and controlled conversation with area background knowledge covered. Throughout the course functional oral/aural communicative skills are emphasized. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 7 semester hours in oral/aural, 7 in writing/translation (3/81); in the upper-division baccalaureate category, 7 semester hours in intermediate conversation and writing (3/81).

DD-0602-0019

Bulgarian Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1380 hours).

Exhibit Dates: 1/81-9/84.

Objectives: An intensive language course which aims to develop basic proficiency in all four language skills at a level providing functional communicative competence.

Instruction: Through the use of dialog manipulation, oral practice, grammar presentation, structural drills, reading and translation exercises, the student develops language proficiency and receives an introduction to selected areas of the culture, history, geography, socio-economic structure and military affairs of the country of the language studied. NOTE: While this course is listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in elementary, 6 in intermediate Bulgarian (3/81); in the upper-division baccalaureate category, 9 semester hours in advanced (conversation, reading) Bulgarian (3/81).

DD-0602-0020

German Extended

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks (690-780 hours).

Exhibit Dates: 1/81-9/84.

Objectives: An intensive course designed to provide a higher level of proficiency in all four language skills for those students directly out of the basic language course.

Instruction: For approximately two-thirds of the course the students discuss readings and answer detailed questions covering the materials in textbooks that deal with German history, geography and current affairs. In addition they read prose and poetry by East German soldiers. The remaining one-third of the course is devoted to listening and transcribing sophisticated, authentic German.

Credit Recommendation: In the upper-division baccalaureate category, 12 semester hours in advanced German (3/81).

DD-0602-0021

Chinese—Cantonese Basic

Course Number: 0ICC47.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1068-1380 hours).

Exhibit Dates: 1/81-Present.

Objectives: To provide an intensive course of study with the focus on speaking/comprehension, reading and writing in descending order of emphasis. The course enables the student to develop operational oral and written communicative skills.

Instruction: The course includes oral/aural drills in both the classroom and the laboratory. Reading instruction emphasizes text comprehension and translation. In the Chinese courses students are exposed to approximately 1200 characters for recognition and are expected to self-write approximately 600 characters. Writing exercises emphasize character writing with a minimum training in expressive writing. Question/answer, drill, classroom discussion and supplementary workbooks provide drill material on prounuciation. NOTE: While these courses are listed as Basic it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category 12 semester hours at the beginning level and 12 ranging from lower intermediate to upper intermediate level (3/81).

DD-0602-0022

Bulgarian Intermediate

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks (690-1080 hours).

Exhibit Dates: 1/81-9/84.

Objectives: An intensive course designed to extend the student's competency in all four skill areas beyond that of the basic language course.

Instruction: The course begins with a review of the content of the basic course. Through selected readings drawn from contemporary materials, and discussion in the designated language on a variety of topics the student achieves greater language proficiency and increased awareness of area studies. Emphasis is given to the reading component focusing on newpapers, periodicals, technical materials and special texts and the aural component using radio broadcasts, tape transcription and class discussion.

Credit Recommendation: In the upper-division baccalaureate category, 12 semester hours in advanced Bulgarian (conversation) and 6 in advanced Bulgarian (reading) (3/81).

DD-0602-0023

Arabic—Egyptian/Syrian
Intermediate

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* 32 weeks (930 hours). *Version 2:* 37 weeks (1080 hours).

Exhibit Dates: *Version 1:* 1/76-9/90. *Version 2:* 1/54-12/75.

Objectives: An intensive course designed to extend the student's competency in all four skill areas beyond that of the basic course.

Instruction: *Version 1:* The course reviews the basic elements of Modern Standard Arabic (MSA) and offers extensive oral-aural practice in Egyptian and Syrian dialects with limited continued training in MSA and also exposes the student to other dialect variations such as Libyan, Palestinian, Jordanian and Iraqi dialects. The course uses an oral-aural approach with extensive situational dialogues and texts relevant to the historical, cultural and geopolitical aspects of the dialects taught. *Version 2:* Whereas in the Basic Course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course; however, and extensive review is programmed, and new structures are taught functionally, as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 8 semester hours in Egyptian dialect, 8 in Syrian dialect and 2 in exposure to other Arabic dialects for the 32-week Arabic course (3/81). NOTE: For current credit recommendation see Appendix F. *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours in Arabic for the 37-week course. (8/74).

DD-0602-0024

CZECH INTERMEDIATE

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* 37 weeks (1080 hours). *Version 2:* 36 weeks (1045 hours).

Exhibit Dates: *Version 1:* 1/78–9/86. *Version 2:* 1/54–12/77.

Objectives: An intensive course which is designed to develop a higher level of proficiency in all four language skills than provided in the basic course.

Instruction: *Version 1:* There is first a review of the content of the basic course. The course then proceeds to have the student achieve greater language proficiency through the use of selected readings drawn from contemporary materials, authentic radio broadcasts and discussions in Czech on a variety of topics including culture, economics and politics. *Version 2:* Whereas in the Basic course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course; however, an extensive review is programmed, and new structures are taught functionally, as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 12 semester hours in advanced Czech (conversation) and 6 in advanced Czech (reading). NOTE: The credit recommended reflects senior year college studies and does not overlap with the advanced credit awarded for the Basic Czech course. (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours in Czech for the 36-week course (8/74).

DD-0602-0025

KOREAN INTERMEDIATE

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* 37 weeks (1080 hours). *Version 2:* 24–37 weeks (690 hours).

Exhibit Dates: *Version 1:* 1/74–9/84. *Version 2:* 1/54–12/73.

Objectives: An intensive course designed to extend the student's competency in all four skill areas beyond that of the basic course.

Instruction: *Version 1:* Training in all four skill areas continues but the reading component receives special emphasis and included work with newspapers, technical material and generally sophisticated expository prose. Oral/aural skill development includes discussion of reading material and audio tape comprehension practice. Writing practice continues to focus on the writing of characters and exercises that derive from the written material. *Version 2:* Whereas in the Basic Course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course; however, an extensive review is programmed, and new structures are taught functionally, as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 15 semester hours in intermediate Korean beyond the basic course (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours in Korean for the 24-week course (8/74); in the graduate degree category, 6 in Korean for the 37-week course (8/74).

DD-0602-0026

ARABIC (EGYPTIAN, SYRIAN, IRAQI) BASIC

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 46 weeks (1350–1386 hours).

Exhibit Dates: 1/81–9/84.

Objectives: To provide an intensive course of study covering phonology and writing systems and to develop the student's fluency in listening, speaking, reading and writing of the language.

Instruction: The course follows a combined functional approach providing extensive oral and written practice through various structural and combination drills, guided conversation, writing exercises and language laboratory recordings. The Arabic course covers about 2500 basic vocabulary including 500 military terms. Readings on subjects dealing with Arabic life and culture are stressed toward the last part of the course. NOTE: While these courses are listed as Basic,it should be understood that this is the terminology used by "regular" programs in the various languages. They are not limited to what most civilian institutions term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in main elements, 4 in main elements of a dialect (3/81); in the upper-division baccalaureate category, 10 semester hours in intermediate Arabic (3/81).

DD-0602-0027

CHINESE ADVANCED

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks (1080-1100 hours).

Exhibit Dates: 1/81–9/85.

Objectives: An intensive course which aims to develop maximal proficiency in all four language skills at a level higher than that provided by the intermediate course.

Instruction: The course begins with a review of the intermediate course materials and continues on with selected readings of contemporary materials and the use of radio broadcasts. reading skills are extended through work on technical materials and military readings. Writing skills are developed through the self-writing of characters introduced in the reading materials.

Credit Recommendation: In the upper-division baccalaureate category, 15 semester hours in advanced Chinese beyond intermediate level, ranging from advanced to technical advanced (3/81).

DD-0602-0028

GERMAN GATEWAY

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: Self-paced 8 weeks.

Exhibit Dates: 1/81–Present.

Objectives: To provide an orientation to the designated language and culture on a very basic level.

Instruction: Students listen to audio recordings of various speakers and work with accompanying print materials. The materials cover such everyday topics as travel, shopping, leisure time activities and survival needs. The student then interacts with the instructor on a one-to-one basis.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 4 semester hours in first year German (3/81).

DD-0602-0029

Greek Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (690-1380 hours).

Exhibit Dates: 1/81-9/84.

Objectives: To train selected individuals in the comprehension, speaking, reading and writing of a foreign language. The student gains the ability of communicating effectively in everyday vocabulary and language.

Instruction: The fundamentals of comprehension, speaking, reading and writing are developed with the help of integrated course materials. The approach is essentially audio-lingual with questions and answers combined with textual interpretation, grammatical exercises and pattern drills. Students come close to fluency. This course teaches both demotic and katharevousa languages. The students active vocabulary consists of approximately 2000 lexical items. NOTE: While this cours is listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in first year Greek, 6 in second year Greek (3/81).

DD-0602-0030

German Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 32 weeks (930-1380 hours).

Exhibit Dates: 1/81-9/85.

Objectives: To understand, speak, read, and write the language with an emphasis on audio-lingual skills.

Instruction: Lectures, practical exercises and laboratory work in basic grammatical structures in conjunction with oral drills, pattern exercises and written dictation. The first part of the course focuses on dialog adaptation and memorization and pronunciation practice with increasing emphasis on reading and translating authentic texts. The subject matter of these texts covers social and cultural situations, geography, economic, social and military history. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages, and are not limited to what institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in first-year German and 6 in second-year German (3/81).

DD-0602-0031

Dutch Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks (690 hours).

Exhibit Dates: 8/76-9/85.

Objectives: To train military personnel to be conversant in everyday Dutch.

Instruction: Class activities focus on the student's ability to master oral and written pattern exercises with emphasis on dialog and memorization. Topical reading selections from current Dutch periodicals are used as well as commercially prepared audio-lingual materials. Discussion of the readings goes beyond recall and recognition questions. Students are asked to analyze and interpret content in Dutch. Emphasis is given to the use of Dutch idiomatic expressions and their English equivalents. NOTE: While the courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours for beginning Dutch and 6 in intermediate Dutch (3/81).

DD-0602-0032

Indonesian Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: *Version 1:* 30 weeks (810-870 hours). *Version 2:* 24-47 weeks.

Exhibit Dates: *Version 1:* 8/76-9/84. *Version 2:* 1/57-7/76.

Objectives: Intensive instruction in the elements of oral comprehension, speaking and reading with functional oral/aural skills emphasized. Students develop operational communicative skills.

Instruction: *Version 1:* The course takes an audio-lingual approach which embraces intensive small-group interaction with multimedia support materials. Grammar and vocabulary are introduced through dialogues, structural drills and controlled conversation. NOTE: While the course is listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language. *Version 2:* Lectures, discussions, and oral drills in the interpretation and translation of the designated language, and additional training in the basic military, geographic, economic, historical, and political information about the country in which the language is spoken.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 9 semester hours in beginning Indonesian and 6 in intermediate Indonesian (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 in Indonesian for the 36-week course, 21 for the 47-week course (3/81).

DD-0602-0033

Albanian Aural Comprehension

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0034

Short Basic Arabic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 12-24 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking, and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. Less credit is recommended for these programs than for the Basic Courses. However, it will be noted that some Short Basic Courses, although not as long as the Aural Comprehension Courses in the same languages, carry the same or larger credit recommendations. The difference in these recommendations can be attributed to the fact that the Short Basic Courses are "more academically suitable" than the Aural Comprehension Courses (i.e., they have a higher reading and writing content).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 8 semester hours for the 12-week course, 15 for the 24-week course (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0035

EXTENDED OR BASIC-INTERMEDIATE
CHINESE—MANDARIN

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 74-75 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To train military personnel to a higher level of proficiency in the interpretation and translation of the designated language than is provided for in the scope of instruction of the Basic Courses and to provide, in the language, a somewhat wider knowledge of military, geographic, economic, historic, and political information of the country and/or area in which the language is spoken.

Instruction: BASIC-INTERMEDIATE COURSES: The designation basic-intermediate given by the military should not be confused with this term as used by civilian educational institutions. The Commission's consultants recommend as much as 40 semester hours for each course because of the material that the students are required to read and, in some cases, because of the characters to be learned and the level of the syntax. However, it is recognized that most civilian educational institutions would be reluctant to grant the full amount of credit recommended for the 74- and 75-week courses in as much as this would constitute a major in the language. It is further recognized that most colleges and universities would require some resident work in a major. Nevertheless, it was the consensus of the consultants that these programs correspond to college courses directed to mastery of the language. In other words, the courses are the equivalent of beginning, intermediate, and advanced courses in the language, plus composition, advanced composition (i.e., learning to write correctly), conversation, and a semester's course in the civilization of the appropriate country or area. It should be noted that no creative writing or literature is given in these programs. EXTENDED COURSES: These courses, which range from 24-37 weeks in length, are attended by students who have already completed a Basic or Aural Comprehension course. The primary objective of this add on training is to improve language competency. Whereas in the Basic course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Extended Course. Pronunciation is expected to undergo considerable refinement, as is the size of the student's vocabulary. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official, business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Extended Course treats in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 40 semester hours (8/74); in the graduate degree category, 6 semester hours (8/74). Note: The credit credit recommended for the programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0036

BULGARIAN INTERMEDIATE

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: The Intermediate Courses at the West Coast Branch are a continuation of the Basic Courses with the objective of reaching a higher level of general language ability in all four language skills.

Instruction: Whereas in the Basic Course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course, however, an extensive review is programmed, and new structures are taught functionally, as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0037

CHINESE—MANDARIN ADVANCED

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/69-1/88.

Objectives: To train selected Department of Defense personnel in foreign languages at a more advanced level of proficiency than is provided in Defense Language Institute Extended or Intermediate Courses; and to provide a wide knowledge of cultural, geographical, economic, historical, and political information on the area in which the language is spoken.

Instruction: The advanced course places equal emphasis upon the development of all four language skills. There is no specialized or technical terminology in the course. It includes a total vocabulary of approximately 4,000 terms, over and above that covered in previous courses, that cover all general, nontechnical communication situations that one would normally encounter in the country of the target language. The cultural complex within which the language is spoken is covered extensively: history, economics, geography, politics, military, ethnic groups, languages, attitudes, customs and mores of the people.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74). NOTE: The credit credit recommended for the programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0038

Scientific Russian

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 6-12 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: The objective of the Scientific course is to train military personnel to read and translate Russian technical and scientific publications and to speak and understand conversational Russian to a limited extent.

Instruction: The Scientific Course includes instruction in Russian phonology and writing systems; oral exercises in elementary speech patterns; Russian structural patterns; reading practice; problems in lexicology; identification of Russian words and cognates; and scientific terminology.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, or in the upper-division baccalaureate category, credit in scientific Russian on the basis of institutional evaluation (8/74).

DD-0602-0039

Arabic Intensive

Course Number: None.

Location: Defense Language Institute, East Coast Branch, Washington, DC.

Length: 40-47 weeks.

Exhibit Dates: 1/54-12/75.

Objectives: The Intensive Courses are designed to make military personnel thoroughly at ease in the speaking, understanding, reading, and writing of a foreign language; the shorter courses are designed to give students a limited command of the language.

Instruction: Lectures, discussions, and oral drills in the understanding, speaking, reading, and writing of a foreign language with additional training in area studies, including the history, geography, politics, economics, government, social structure, and military situations pertaining to the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours for the 40-week course, 27 for the 47-week course (21 if taken prior to 1970) (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given, but also on the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0040

Vietnamese—Saigon Dialect Basic

Course Number: None.

Location: Defense Language Institute Support Command, Biggs Field, El Paso, TX.

Length: 47 weeks.

Exhibit Dates: 9/66-7/73.

Objectives: The Basic Course provide personnel with training in the interpretation and translation of the designated language, as well as basic military, geographic, economic, historical, and political information about the area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the designated language. The term, "Basic" as used by the military, indicates a "regular" course in the language. The Basic Course is not limited to what most civilian institutions would term beginning or basic courses in the language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 21 semester hours in Vietnamese (8/74).

DD-0602-0041

National Cryptologic School
Resident Language
(Basic Chinese—Refresher)
(Basic Russian—Refresher)
(Basic Vietnamese)

Course Number: None.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 21-30 weeks.

Exhibit Dates: 1/54-1/88.

Objectives: The 12-week Refresher courses are designed to enable personnel to regain a basic competence in comprehension of the standard literary language by an accelerated, systematic review of grammar and vocabulary. (A basic course in the language is assumed as a prerequisite); the 30-week Basic Vietnamese course is designed to teach personnel the grammar and vocabulary necessary for a basic comprehension of the standard literary language with emphasis on a thorough understanding of structure.

Instruction: Refresher Courses: Phonology; writing system; basic vocabulary of economic, political, and military terms. Basic Vietnamese: In addition to the preceding instruction, this course includes grammar (morphology, derivation, and syntax).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 6 semester hours in Chinese for the 12-week basic (refresher) course; 3 in Russian for the 12-week basic (refresher) course; 15 in Vietnamese for the 30-week basic course (8/74).

DD-0602-0042

Short Basic Turkish

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 12 weeks (360 hours).

Exhibit Dates: 1/77-11/85.

Objectives: To provide an introduction to modern standard Turkish phonology and the most frequently used grammatical structures.

Instruction: The course starts with a formal study of modern Turkish phonology and grammar utilizing the usual aural-oral and written techniques. A variety of situational dialogues is used to develop a working, practical knowledge of the language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 7 semester hours in introduction to basic Turkish elements (3/81).

DD-0602-0043

Foreign Service Institute Language
Program
(Rumanian)

Course Number: None.

Location: School of Language Studies, Arlington, VA.

Length: 44 weeks.

Exhibit Dates: 1/59-1/88.

Objectives: To develop oral-aural proficiencies in languages for foreign affairs personnel assigned to overseas posts.

Instruction: The curriculum is designed to help students acquire language skills to meet general social demands and to further develop the competence to handle professional work related requirements within special fields; learning to be an effective communicator and reading of current newspapers, periodicals, documentary material and literature in various professional fields of the language being studied are an integral part of each program.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, a maximum of 21 semester hours (7/73). Before awarding credit, officials at receiving institution should obtain a certified Language Training Report (Form DS-651) from the Registrar of the Foreign Service Institute (Department of State; 1400 Key Boulevard; Arlington, Virginia 22209).

(Swahili)

Course Number: None.

Location: School of Language Studies, Arlington, VA.

Length: 32 weeks.

Exhibit Dates: 1/59–1/86.

Objectives: The primary objective of the Foreign Service Institute language programs of the Department of State is to develop oral-aural proficiencies in languages for foreign affairs personnel assigned overseas.

Instruction: The curriculum is designed to help students acquire language skills to meet general social demands and to further develop the competence to handle professional work-related requirements within special fields; learning to be an effective communicator and reading of current newspapers, periodicals, documentary material and literature in various professional fields of the language being studied are integral parts of each program.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, a maximum of 18 semester hours (7/73). Before awarding credit, officials at receiving institutions should obtain a certified Language Training Report (Form DS-651) from the Registrar of the Foreign Service Institute (Department of State; 1400 Key Boulevard; Arlington, Virginia 22209).

DD-0602-0049

ARABIC BASIC

Course Number: None.

Location: Army Language School, Presidio of Monterey, CA.

Length: 46 weeks.

Exhibit Dates: 1/54–12/56.

Objectives: To train officers and enlisted personnel in the interpretation or translation of a foreign language, and to provide basic military, geographic, economic, historical, and political information about the country or area in which the language is spoken. (These area studies are taught in the foreign language.)

Instruction: Lectures, discussions, and oral drills on the language of a foreign country and basic military, geographic, economic, historical, and political information about the country in which the language is spoken. While this course is listed as Basic, it should be understood that this is the terminology used by the armed forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) The least difficult languages for English speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0050

BULGARIAN BASIC

Course Number: None.

Location: Army Language School, Presidio of Monterey, CA.

Length: 46 weeks.

Exhibit Dates: 1/54–12/56.

Objectives: To train officers and enlisted personnel in the interpretation or translation of a foreign language, and to provide basic military, geographic, economic, historical, and political information about the country or area in which the language is spoken. (These area studies are taught in the foreign language.)

Instruction: Lectures, discussions, and oral drills on the language of a foreign country and basic military, geographic, economic, historical, and political information about the country in which the language is spoken. While this course is listed as Basic, it should be understood that this is the terminology used by the armed forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) The least difficult languages for English speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and

(3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0051

CHINESE—CANTONESE BASIC

Course Number: None.

Location: Army Language School, Presidio of Monterey, CA.

Length: 46 weeks.

Exhibit Dates: 1/54–12/56.

Objectives: To train officers and enlisted personnel in the interpretation or translation of a foreign language, and to provide basic military, geographic, economic, historical, and political information about the country or area in which the language is spoken. (These area studies are taught in the foreign language.)

Instruction: Lectures, discussions, and oral drills on the language of a foreign country and basic military, geographic, economic, historical, and political information about the country in which the language is spoken. While this course is listed as Basic, it should be understood that this is the terminology used by the armed forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 26 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) The least difficult languages for English speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) The least difficult languages for English speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0068

SERBO-CROATIAN BASIC

Course Number: None.

Location: Army Language School, Presidio of Monterey, CA.

Length: 46 weeks.

Exhibit Dates: 1/54-12/56.

Objectives: To train officers and enlisted personnel in the interpretation or translation of a foreign language, and to provide basic military, geographic, economic, historical, and political information about the country or area in which the language is spoken. (These area studies are taught in the foreign language.)

Instruction: Lectures, discussions, and oral drills on the language of a foreign country and basic military, geographic, economic, historical, and political information about the country in which the language is spoken. While this course is listed as Basic, it should be understood that this is the terminology used by the armed forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) The least difficult languages for

English speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0069

DD-0602-0106

Chinese Aural Comprehension

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1310-1380 hours).

Exhibit Dates: 1/81-7/81.

Objectives: An intensive course of study in the designated language emphasizing listening comprehension, transcription and translation.

Instruction: Instruction emphasizes aural comprehension including general comprehension. Reading, speaking and writing are also covered in descending order of emphasis. Emphasis is on transcription and translation of recorded texts and dialogues. The aural comprehension is focused on radio communications . There is less emphasis on speaking and slightly lower requirements on the number of characters to be recognized and the number of characters for self writing than are taught in the basic course.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 12 semester hours at the beginning level and 9 ranging from the lower intermediate to the upper intermediate level (3/81).

DD-0602-0107

French Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks (690-1380 hours).

Exhibit Dates: 1/81-9/86.

Objectives: Intensive basic instruction in the four skills: elements of aural comprehension, speaking, reading and writing. Introduction of the most frequent structural features through cultural/situational exercises.

Instruction: Audio-lingual small-group instruction incorporating structural and vocabulary/pronunciation drills. Grammar and vocabulary are introduced through dialogues, reading/translation exercises and controlled conversation with area background knowledge covered. Throughout the course functional oral/aural communicative skills are emphasized. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in oral/aural, 4 in reading/writing (3/81).

DD-0602-0108

Italian Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks (690-1380 hours).

Exhibit Dates: 1/81-9/90.

DD-0602-0115

RUSSIAN EXTENDED

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 27 weeks (690-780 hours).

Exhibit Dates: 1/81-Present.

Objectives: An intensive course designed to provide a higher level of proficiency in all four language skills for those students directly out of the basic language course.

Instruction: The course draws upon selected readings from contemporary materials, and Russian radio broadcasts, in order to provide the student with discussion materials in a variety of topic areas. The student achieves further language proficiency and increased awareness of Russian/Soviet area studies.

Credit Recommendation: In the upper-division baccalaureate category, 10 semester hours in advanced Russian (conversation), 3 in advanced Russian (reading) (3/81).

DD-0602-0116

CHINESE—MANDARIN BASIC

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1068-1380 hours).

Exhibit Dates: 1/81-9/84.

Objectives: To provide an intensive course of study with the focus on speaking/comprehension, reading and writing in descending order of emphasis. The course enables the student to develop operational oral and written communicative skills.

Instruction: All the courses include oral/aural drills in both the classroom and the laboratory. Reading instruction emphasizes text comprehension and translation. In the Chinese courses students are exposed to approximately 1200 characters for recognition and are expected to self-write approximately 600 characters. Writing exercises emphasize character writing with a minimum training in expressive writing. There is a fair amount of military terminology interspersed with the vocabulary of a more general nature. NOTE: While these courses are listed as Basic it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category 12 semester hours at the beginning level and 12 ranging from lower intermediate to upper intermediate level (3/81).

DD-0602-0117

Japanese Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1068–1380 hours).

Exhibit Dates: 1/81–9/84.

Objectives: To provide an intensive course of study with the focus on speaking/comprehension, reading and writing in descending order of emphasis. The course enables the student to develop operational oral and written communicative skills.

Instruction: All the courses include oral/aural drills in both the classroom and the laboratory. Reading instruction emphasizes text comprehension and translation. Japanese textual materials introduce the student to 500 Kanji with supplementary materials providing exposure to a limited number of additional characters. Question/answer, drill, classroom discussion and supplementary workbooks provide drill material on prounuciation. NOTE: While these courses are listed as Basic it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category 12 semester hours at the beginning level and 8 ranging from lower intermediate to upper intermediate level (3/81).

DD-0602-0118

Korean Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1068–1380 hours).

Exhibit Dates: 1/81–9/84.

Objectives: To provide an intensive course of study with the focus on speaking/comprehension, reading and writing in descending order of emphasis. The course enables the student to develop operational oral and written communicative skills.

Instruction: All the courses include oral/aural drills in both the classroom and the laboratory. Reading instruction emphasizes text comprehension and translation. The Korean course introduces the student to about 300 Chinese characters in addition to Langul. There is a fair amount of military terminology interspersed with the vocabulary of a more general nature. Question/answer, drill, classroom discussion and supplementary workbooks provide drill material on prounuciation. NOTE: While these courses are listed as Basic it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper division baccalaureate category 12 semester hours at the beginning level and 10 ranging from lower intermediate to upper intermediate level (3/81).

DD-0602-0119

Thai Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 36 weeks (1068–1380 hours).

Exhibit Dates: 1/81–9/84.

Instruction: The course begins with a review of the content of the basic course. Through selected readings drawn from contemporary materials, and discussion in the designated language on a variety of topics the student achieves greater language proficiency and increased awareness of area studies. Emphasis is given to the reading component focusing on newpapers, periodicals, technical materials and special texts and the aural component using radio broadcasts, tape transcription and class discussion.

Credit Recommendation: In the upper-division baccalaureate category, 8 semester hours for advanced intermediate Spanish (conversation/translation) and 4 in intermediate grammar (3/81).

DD-0602-0125

Vietnamese Intermediate

Course Number: None

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks (690-1080 hours).

Exhibit Dates: 1/81-9/84.

Objectives: An intensive course designed to extend the student's competency in all four skill areas beyond that of the basic language course.

Instruction: The course begins with a review of the content of the basic course. Through selected readings drawn from contemporary materials, and discussion in the designated language on a variety of topics the student achieves greater language proficiency and increased awareness of area studies. Emphasis is given to the reading component focusing on newpapers, periodicals, technical materials and special texts and the aural component using radio broadcasts, tape transcription and class discussion.

Credit Recommendation: In the upper-division baccalaureate category, 15 semester hours in intermediate Vietnamese beyond the basic course (3/81).

DD-0602-0126

Persian Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1350-1386 hours).

Exhibit Dates: 1/81-9/85.

Objectives: To provide an intensive course of study covering phonology and writing systems and to develop the student's fluency in listening, speaking, reading and writing of the language.

Instruction: The course follows a combined functional approach providing extensive oral and written practice through various structural and combination drills, guided conversation, writing exercises and language laboratory recordings. The course has a special emphasis on reading and comprehension of specialized military materials during the last part of the course. NOTE: While this is listed as Basic it should be understood that this is the terminology used by the the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in main elements of Persian (3/81); in the upper-division baccalaureate category, 5 in advanced Persian, 8 in grammar and vocabulary for the Persian course (3/81).

DD-0602-0127

Turkish Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks (1350-1386 hours).

Exhibit Dates: 1/81-9/85.

Objectives: To provide an intensive course of study covering phonology and writing systems and to develop the student's fluency in listening, speaking, reading and writing of the language.

Instruction: The course follows a combined functional approach providing extensive oral and written practice through various structural and combination drills, guided conversation, writing exercises and language laboratory recordings. The course has special emphasis on reading and comprehension of specialized military materials during the last part of the course. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are "regular" programs in the various languages and are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in main elements of Turkish (3/81); in the upper-division baccalaureate category, 8 semester hours in grammar and vocabulary, 6 in advanced Turkish (3/81).

DD-0602-0128

Russian Advanced

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 37 weeks (1080-1100 hours).

Exhibit Dates: 1/81-9/90.

Objectives: An intensive course which aims to develop maximal proficiency in all four language skills at a level higher than that provided by the intermediate course.

Instruction: The course begins with a review of the intermediate course materials and continues on with selected readings of contemporary materials and the use of radio broadcasts. The course time is also devoted to advanced composition and conversation, translation and stylistics. Students produce oral and written reports on area background subjects.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in advanced Russian (conversation and composition), 6 in advanced Russian (reading), 3 in advanced Russian (syntax) and 3 in advanced Russian (stylistics) (3/81).NOTE: For current credit recommendation see Appendix F.

DD-0602-0129

Korean Gateway

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: Self-paced 8 weeks.

Exhibit Dates: 1/81-9/84.

Objectives: To provide an orientation to the designated language and culture on a very basic level.

Instruction: Students listen to audio recordings of various speakers and work with accompanying print materials. The materials cover such everyday topics as travel, shopping, leisure time activities and survival needs. The student then interacts with the instructor on a one-to-one basis.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in elementary Korean (3/81).

DD-0602-0130

Norwegian Basic

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks (690-1380 hours).

Exhibit Dates: 1/81-9/85.

Objectives: To train selected individuals in the comprehension, speaking, reading and writing of a foreign language. The student gains the ability of communicating effectively in everyday vocabulary and language.

Instruction: The fundamentals of comprehension, speaking, reading and writing are developed with the help of integrated course materials. The approach is essentially audio-lingual with questions and answers combined with textual interpretation, grammatical exercises and pattern drills. Students come close to fluency. The course uses course materials identical to those presently used in comparable courses in colleges and universities. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in first year Norwegian and 6 in second year Norwegian (3/81).

DD-0602-0131

Swedish Basic

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 47 weeks (690-1380 hours).

Exhibit Dates: 1/81-Present.

Objectives: To train selected individuals in the comprehension, speaking, reading and writing of a foreign language. The student gains the ability of communicating effectively in everyday vocabulary and language.

Instruction: The fundamentals of comprehension, speaking, reading and writing are developed with the held of integrated course materials. The approach is essentially audio-lingual with questions and answers combined with textual interpretation, grammatical exercises and pattern drills. Students come close to fluency. The course uses course materials identical to those presently used in comparable courses in colleges and universities. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in first year Swedish and 6 in second year Swedish (3/81).

DD-0602-0132

HUNGARIAN BASIC

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 47 weeks (930–1380 hours).

Exhibit Dates: 1/81–Present.

Objectives: To understand, speak, read, and write the language with an emphasis on audio lingual skills.

Instruction: Lectures, practical exercises and laboratory work in basic grammatical structures in conjunction with oral drills, pattern exercises and written dictation. The course covers over 4000 vocabulary items, 500 of which are military terms. Students draft written reports on general and technical materials and cover a fair amount of cultural information on modern Hungary. NOTE: While these courses are listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in introductory Hungarian 6 in in advanced Hungarian (3/81); in the upper-division baccalaureate category, 5 semester hours in reading and translation and 3 in culture and civilization (3/81).

DD-0602-0133

SPANISH BASIC

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA..

Length: *Version 1:* 28 weeks (810–870 hours). *Version 2:* 24 weeks.

Exhibit Dates: *Version 1:* 8/76–9/85. *Version 2:* 1/57–7/76.

Objectives: Intensive instruction in the elements of oral comprehension, speaking and reading with functional oral/aural skills emphasized. Students develop operational communicative skills.

Instruction: *Version 1:* The course takes an audio-lingual approach which embraces intensive small-group interaction with multimedia support materials. Grammar and vocabulary are introduced through dialogues, structural drills and controlled conversation. NOTE: While the course is listed as Basic, it should be understood that this is the terminology used by the Armed Forces to indicate that the courses are their "regular" programs in the various languages. They are not limited to what most civilian institutions would term beginning or basic courses in a language. *Version 2:* Lectures, discussions, and oral drills in the interpretation and translation of the designated language, and additional training in the basic military, geographic, economic, historical, and political information about the country in which the language is spoken.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 9 semester hours for the elements of basic Spanish (oral/aural), 4 for reading/writing (3/81). *Version 2:* In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 21 semester hours for the 47 week course: 15 for the 24 week course (8/74).

DD-0602-0134

ARABIC AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 47 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0135

BULGARIAN AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (7/84). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0136

CHINESE—MANDARIN AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 32–47 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 12 semester hours for the 33-week course, 15 for the 37-week course, 18 for the 47-week course, and 12 for the Special 32-week course (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Portuguese Aural Comprehension

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 12 semester hours (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0146

Romanian Aural Comprehension

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0147

Russian Stenotype Aural Comprehension

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 50 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74). This 50 week course includes the regular 37 week Aural Comprehension and 13 weeks of stenotype training. NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0148

Serbo-Croatian Aural Comprehension

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessary corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. DD-0602-0152

Short Basic French

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 12 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking; and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. Less credit is recommended for these programs than for the Basic Courses. However, it will be noted that some Short Basic Courses, although not as long as the Aural Comprehension Courses in the same languages, carry the same or larger credit recommendations. The difference in these recommendations can be attributed to the fact that the Short Basic Courses are "more academically suitable" than the Aural Comprehension Courses (i.e., they have a higher reading and writing content).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 8 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0153

SHORT BASIC GERMAN

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 12-16 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking; and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. Less credit is recommended for these programs than for the Basic Courses. However, it will be noted that some Short Basic Courses, although not as long as the Aural Comprehension Courses in the same languages, carry the same or larger credit recommendations. The difference in these recommendations can be attributed to the fact that the Short Basic Courses are "more academically suitable" than the Aural Comprehension Courses (i.e., they have a higher reading and writing content).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 8 semester hours for the 12 week course, 10 for the 16 week course (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0154

SHORT BASIC GREEK

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 12 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking; and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. Less credit is recommended for these programs some Short Basic Courses, although not as long as the Aural Comprehension Courses in the same languages, carry the same or larger credit recommendations. The difference in these recommendations can be attributed to the fact that the Short Basic Courses are "more academically suitable" than the Aural Comprehension Courses (i.e., they have a higher reading and writing content).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 8 semester hours for the 11 or 12 week course (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0161

SHORT BASIC ROMANIAN

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 12 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking; and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. Less credit is recommended for these programs than for the Basic Courses. However, it will be noted that some Short Basic Courses, although not as long as the Aural Comprehension Courses in the same languages, carry the same or larger credit recommendations. The difference in these recommendations can be attributed to the fact that the Short Basic Courses are "more academically suitable" than the Aural Comprehension Courses (i.e., they have a higher reading and writing content).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 8 semester hours (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0162

SHORT BASIC SPANISH

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 11-12 weeks.

Exhibit Dates: 1/54-12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking; and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructional materials. DD-0602-0165

SHORT BASIC VIETNAMESE—SAIGON

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 6–32 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach officer and enlisted personnel from each branch of the armed services and certain civilian personnel, in the comprehension, speaking, reading, and writing of the target language at a limited fluency level, with primary emphasis on comprehension and speaking; and to provide basic military, geographic, cultural, and political information about the country or area in which the language is spoken.

Instruction: Lectures, discussions, and oral drills in the comprehension, speaking, reading, and writing of the target language, and additional training in the basic military, geographic, cultural, and political information about the country or area in which the language is spoken. NOTE: The Short Basic Courses at the West Coast Branch are abbreviated versions of the Basic Courses, using the same instructionai materials. Less credit is recommended for these programs than for the Basic Courses. However, it will be noted that some Short Basic Courses, although not as long as the Aural Comprehension Courses in the same languages, carry the same or larger credit recommendations. The difference in these recommendations can be attributed to the fact that the Short Basic Courses are "more academically suitable" than the Aural Comprehension Courses (i.e., they have a higher reading and writing content).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 3 semester hours for the 6-week course, 8 for the 8- or 12-week course, 10 for the 16-week course, 15 for the 32-week course (8/74). NOTE: The credit recommended for these programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0166

EXTENDED OR BASIC-INTERMEDIATE GERMAN

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To train military personnel to a higher level of proficiency in the interpretation and translation of the designated language than is provided for in the scope of instruction of the Basic Courses and to provide, in the language, a somewhat wider knowledge of military, geographic, economic, historic, and political information of the country and/or area in which the language is spoken.

Instruction: BASIC-INTERMEDIATE COURSES: The designation basic-intermediate given by the military should not be confused with this term as used by civilian educational institutions. The Commission's consultants recommend as much as 40 semester hours for each course because of the material that the students are required to read and, in some cases, because of the characters to be learned and the level of the syntax. However, it is recognized that most civilian educational institutions would be reluctant to grant the full amount of credit recommended for the 74- and 75-week courses in as much as this would constitute a major in the language. It is further recognized that most colleges and universities would require some resident work in a major. Nevertheless, it was the consensus of the consultants that these programs correspond to college courses directed to mastery of the language. In other words, the courses are the equivalent of beginning, intermediate, and advanced courses in the language, plus composition, advanced composition (i.e., learning to write correctly), conversation, and a semester's course in the civilization of the appropriate country or area. It should be noted that no creative writing or literature is given in these programs. EXTENDED COURSES: These courses, which range from 24-37 weeks in length, are attended by students who have already compl[illegible] a Basic or Aural Comprehension cour[illegible] The primary objective of this add on training is to improve language competency. Whereas in the Basic course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Extended Course. Pronunciation is expected to undergo considerable refinement, as is the size of the student's vocabulary. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official, business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Extended Course treats in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (8/74). Note: The credit credit recommended for the programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0167

Extended or Basic-Intermediate Japanese

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 75 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To train military personnel to a higher level of proficiency in the interpretation and translation of the designated language than is provided for in the scope of instruction of the Basic Courses and to provide, in the language, a somewhat wider knowledge of military, geographic, economic, historic, and political information of the country and/or area in which the language is spoken.

DD-0602-0171

CHINESE—MANDARIN INTERMEDIATE

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: The Intermediate Courses at the West Coast Branch are a continuation of the Basic Courses with the objective of reaching a higher level of general language ability in all four language skills.

Instruction: Whereas in the Basic Course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course; however, an extensive review is programmed, and new structures are taught functionally as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74); in the graduate degree category, 6 semester hours (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0172

French Intermediate

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 16 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: The Intermediate Courses at the West Coast Branch are a continuation of the Basic Courses with the objective of reaching a higher level of general language ability in all four language skills.

Instruction: Whereas in the Basic Course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course; however, an extensive review is programmed, and new structures are taught functionally, as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 10 semester hours (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0173

German Intermediate

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 24 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: The Intermediate Courses at the West Coast Branch are a continuation of the Basic Courses with the objective of reaching a higher level of general language ability in all four language skills.

Instruction: Whereas in the Basic Course the audio-lingual skills were stressed, equal emphasis is put on all four language skills in the Intermediate Course. Pronounciation will undergo refinement through constant practice. All important structures are presumed to have been learned in the Basic Course; however, an extensive review is programmed, and new structures are taught functionally, as needed in dealing with the course content. Vocabulary count, customary indicator of the scope of a course, will increase rapidly and extensively. Active vocabulary is expected to double, and passive vocabulary to expand considerably. Fluency in reading is developed to the point of direct comprehension of the printed page. Proficiency in writing includes mastery of forms, such as official business, and social correspondence. Equal in importance to language competency is the matter of area knowledge. The Intermediate Course purports to treat in considerable depth all facets of the country's contemporary civilization, together with a study of the historical development of the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 9 semester hours (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0174

Polish Intermediate

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

DD-0602-0180

Russian Advanced

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 37 weeks.

Exhibit Dates: 1/69-9/90.

Objectives: To train selected Department of Defense personnel in foreign languages at a more advanced level of proficiency than is provided in Defense Language Institute Extended or Intermediate Courses; and to provide a wide knowledge of cultural, geographical, economic, historical, and political information on the area in which the language is spoken.

Instruction: The advanced course places equal emphasis upon the development of all four language skills. There is no specialized or technical terminology in the course. It includes a total vocabulary of approximately 4,000 terms, over and above that covered in previous courses, that cover all general, nontechnical communication situations that one would normally encounter in the country of the target language. The cultural complex within which the language is spoken is covered extensively: history, economics, geography, politics, military, ethnic groups, languages, attitudes, customs and mores of the people.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74). NOTE: For current credit recommendation, please see Appendix F. NOTE: The credit recommended for the programs is based not only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukranian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0181

Russian Refresher

Course Number: None.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 6-12 weeks.

Length: 36 weeks.

Exhibit Dates: 1/54–12/75.

Objectives: The Intensive Courses are designed to make military personnel thoroughly at ease in the speaking, understanding, reading, and writing of a foreign language; the shorter courses are designed to give students a limited command of the language.

Instruction: Lectures, discussions, and oral drills in the understanding, speaking, reading, and writing of a foreign language with additional training in area studies, including the history, geography, politics, economics, government, social structure, and military situations pertaining to the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given, but also on the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0191

VIETNAMESE—SAIGON INTENSIVE

Course Number: None.

Location: Defense Language Institute, East Coast Branch, Washington, DC.

Length: 36–47 weeks.

Exhibit Dates: 1/54–12/75.

Objectives: The Intensive Courses are designed to make military personnel thoroughly at ease in the speaking, understanding, reading, and writing of a foreign language; the shorter courses are designed to give students a limited command of the language.

Instruction: Lectures, discussions, and oral drills in the understanding, speaking, reading, and writing of a foreign language with additional training in area studies, including the history, geography, politics, economics, government, social structure, and military situations pertaining to the area.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours for the 36-week course, 21 for the 47-week course (8/74). NOTE: The credit recommended for the programs is based not only upon the type of course given, but also on the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with the level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian, and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0192

SHORT BASIC VIETNAMESE—SAIGON DIALECT

Course Number: None.

Location: Defense Language Institute Support Command, Biggs Field, El Paso, TX.

Length: 12–32 weeks.

Exhibit Dates: 9/66–7/73.

Objectives: The Short Basic Course provides personnel with training in the interpretation and translation of the designated language, as well as basic military, geographic, economic, historical, and political information about the area in which the language is spoken. This is an accelerated langauge program.

Instruction: Lectures, discussions, and oral drills in the designated language. The term, "Basic" as used by the military, indicates a "regular" course in the language. The Short Basic Course is not limited to what most civilian institutions would term beginning or basic courses in the language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 8 semester hours for the 12 week course, 15 for the 32 week course (8/74).

DD-0602-0193

VIETNAMESE—HANOI AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute Support Command, Biggs Field, El Paso, TX.

Length: 47 weeks.

Exhibit Dates: 10/66–7/70.

Objectives: The Aural Comprehension Course is designed primarily to teach students to comprehend the language as spoken by a foreign national.

Instruction: Lectures, discussions, and oral drills in the designated language. Although some reading and writing is included, the spoken language is emphasized. Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are recommended for less credit than the Basic Courses.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 18 semester hours (8/74).

DD-0602-0194

VIETNAMESE—HANOI AURAL COMPREHENSION

Course Number: None.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 37–47 weeks.

Exhibit Dates: 1/54–12/80.

Objectives: To teach students to comprehend the designated language as spoken by a foreign national.

Instruction: The Aural Comprehension Courses were established at the West Coast Branch on July 1, 1964 (except for the courses in Russian, which were offered previously). Although some reading and writing is included in these courses, they are designed primarily to teach students to comprehend the language as spoken by a foreign national. The spoken language is emphasized as a necessar corollary for developing comprehension skill.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, extending into the upper-division baccalaureate category, 15 semester hours (for the 37-week course, 18 for the 47-week course (8/74). NOTE: Since the Aural Comprehension Courses do not place equal stress on the four language skills, they are are recommended for less credit that the Basic Courses. It will be noted that the maximum credit recommended for the 37-week Aural Comprehension Course varies from 12 to 18 semester hours. This credit variation is based primarily upon the higher reading and writing content in those courses recommended for 15 and 18 semester hours. Also: The credit recommended for the program is not based only upon the type of course given, but also upon the relative difficulty of the language studied. The various languages given by the Defense Language Institute are listed in accordance with their level of difficulty as follows: (1) the least difficult languages for the English-speaking learner (Danish, French, German, Italian, Norwegian, Portuguese, Romanian, Spanish, Swedish, and Swahili); (2) languages of greater difficulty, but with alphabetical writing systems which may be learned concurrently without appreciably affecting the progress in learning the spoken language (Albanian, Bulgarian, Burmese, Czech, Finnish, Greek, Hungarian, Indonesian, Lithuanian, Persian, Polish, Russian, Serbo-Croatian, Slovenian, Thai, Turkish, Ukrainian and Vietnamese); and (3) the more difficult languages where the reading problem is complicated (Arabic, Chinese, Japanese, and Korean).

DD-0602-0205

German Gateway

Course Number: 03GM; 03GM06.

Location: Defense Language Institute, West Coast Branch, Presidio of Monterey, CA.

Length: 8 weeks (173 hours).

Exhibit Dates: 10/84–Present.

Learning Outcomes: Upon completion of the course the student will be able to function in common everyday situations, using common phrases to express herself/himself, and to understand similar phrases in everyday situations when spoken slowly by native speakers; also understand cultural issues.

Instruction: The course is conducted through small-group classroom instruction focusing on communication in everyday situations; presentation of cultural background is included.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in German language and culture (8/87).

DD-0602-0206

Arabic-Syrian Special

Course Number: 09AP; 09AP24.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 24 weeks (678 hours).

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course the student will have achieved listening and speaking proficiency at the I.L.R. level 1-plus which is equivalent to the ACTFL intermediate high level.

Instruction: Small-group classroom instruction stresses communicative competence in oral/aural reading skills, taught concurrently. An integral learning format directed toward functional language use incorporates a cultural component.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in Syrian dialect (8/87).

DD-0602-0207

Arabic-Iraqi Special

Course Number: 09DG; 09DG24.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 24 weeks (678 hours).

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course the student will have achieved listening and speaking proficiency at the I.L.R. level 1-plus which is equivalent to the ACTFL intermediate high level.

Instruction: Small-group classroom instruction stresses communicative competence in oral/aural reading skills, taught concurrently. An integral learning format directed toward functional language use incorporates a cultural component.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in Iraqi dialect (8/87).

DD-0602-0208

Arabic-Egyptian Special

Course Number: 09AE; 09AE24.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 24 weeks (678 hours).

Exhibit Dates: 10/86–Present.

Learning Outcomes: Upon completion of the course the student will have achieved listening and speaking proficiency at the I.L.R. level 1-plus which is equivalent to the ACTFL intermediate high level.

Instruction: Small-group classroom instruction stresses communicative competence in oral/aural reading skills, taught concurrently. An integral learning format directed toward functional language use incorporates a cultural component.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in Egyptian dialect (8/87).

DD-0602-0209

Arabic-Iraqi Extended

Course Number: 05DG; 05DG16.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 16 weeks (456 hours).

Exhibit Dates: 10/85–Present.

Learning Outcomes: Upon completion of the course the student will have achieved listening and speaking proficiency at the I.L.R. level 1-plus which is equivalent to the ACTFL intermediate high level.

Instruction: Small-group classroom instruction stresses communicative competence in oral/aural reading skills, taught concurrently. An integral learning format directed toward functional language use incorporates a cultural component.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 10 semester hours in Iraqi dialect (8/87).

DD-0602-0210

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 12 semester hours in elementary Persian (2/88), in the upper-division baccalaureate category, 6 semester hours in intermediate Persian, 4 in Persian news media (2/88). NOTE: For the current credit recommendation see Appendix F.

DD-0602-0231

TURKISH BASIC

Course Number: 01TU; 01TU47.

Location: Defense Language Institute, Presidio of Monterey, CA.

Length: 47 weeks (1382 hours).

Exhibit Dates: 10/85–9/90.

Learning Outcomes: Upon completion of the course the student will be able to achieve listening, speaking, and reading proficiency at the following I.L.R. levels: Listening 1; Speaking 1/2; Reading 1; and Writing 0/1.

Instruction: This course offers an integrated skill method directed toward functional language use with limited writing competence. Instruction is accomplished through small-group classroom instruction, stressing oral/aural practice, use of Turkish newspaper and Voice of America Turkish programs during the last ten weeks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 12 semester hours in elementary Turkish (2/88); in the upper-division baccalaureate category, 6 semester hours in intermediate Turkish, 4 in Turkish news media (2/88).NOTE: For current credit recommendation see Appendix F.

DD-0602-0232

ARABIC BASIC (MODERN STANDARD ARABIC)

Course Number: 01AD; 01AD47.

Location: Defense Language School, Presidio of Monterey, CA.

Length: 47 weeks (1412 hours).

Exhibit Dates: 10/84–9/90.

Learning Outcomes: Upon completion of the course the student will have achieved listening, speaking, and reading proficiency at the following I.L.R. levels: Listening 1/2; Speaking 1/2; Reading 1; Writing 0/1.

Instruction: The course is presented through an integrated skill method directed toward functional language use with limited writing competence. Small-group classroom instructions stresses oral/aural practice and the use of Arabic newspapers and radio programs during the last ten weeks.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 12 semester hours in elementary Modern Standard Arabic (MSA) (2/88); in the upper-division baccalaureate category, 6 semester hours in intermediate Modern Standard Arabic, 4 in Arabic news media (2/88). NOTE: For current credit recommendation see Appendix F.

DD-1402-0001

COMMAND AND CONTROL

Course Number: None.

Location: Department of Defense Computer Institute, Washington, DC.

Length: 3 weeks (105 hours).

Exhibit Dates: 5/69–12/80.

Objectives: To provide personnel with an introduction to automatic data processing and computer technology.

Instruction: Lectures and practical exercises in automatic data processing and computer technology, including survey of computers and peripheral equipment, computer fundamentals, source data collection, data communications, systems analysis, main memory and data representation, codes, fixed-word-length machine concepts, higher-level languages, and ADP system management.

Credit Recommendation: In the vocational certificate category, 3 semester hours in principles of data processing (7/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in principles of data processing (7/74); in the upper-division baccalaureate category, 2 semester hours in introduction to computer principles (12/68).

DD-1402-0002

INTRODUCTION TO COMPUTER TECHNOLOGY

Course Number: None.

Location: Department of Defense Computer Institute, Washington, DC.

Length: 2 weeks (65 hours).

Exhibit Dates: 8/77–12/80.

Objectives: Course is designed to provide an educational background for middle-management personnel who are general-purpose digital computer systems users and have had little or no previous introduction to data processing principles.

Instruction: Course covers computer capabilities, limitations and applications; the basics of computer hardware and software; systems development management considerations, planning and design; and an introduction to operations research and analysis and quantitative techniques. The student is provided hands-on programming experience with a remote, time-sharing computer terminal using the BASIC programming language.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in data processing principles (5/77).

DD-1402-0003

AUTOMATED INFORMATION SYSTEMS MANAGEMENT FOR INTERMEDIATE MANAGERS

(Automated Information Systems Management for Intermediate Executives)

(Computer Orientation for Intermediate Executives)

Course Number: None.

Location: National Defense University, Washington, DC; Department of Defense Computer Institute, Washington, DC.

Length: 2 weeks (65 hours).

Exhibit Dates: *Version 1:* 10/83–1/90. *Version 2:* 8/77–9/83.

Objectives: Course is designed to provide an educational background for high-level management personnel who are general-purpose digital computer systems users and have had little or no previous introduction to data processing principles.

Instruction: *Version 1:* Course covers computer capabilities, limitations, and applications; the basics of computer hardware and software; systems development management considerations; planning and design; introduction to quantitative techniques. Also includes hardware and software acquisition, data base management systems, small computer systems, teleprocessing and distributed processing, and computer security. Student is provided hands-on programming experience with a remote, time-sharing computer terminal using the BASIC programming language. *Version 2:* Course covers computer capabilities, limitations, and applications; the basics of computer hardware and software; systems development management considerations; planning and design; and an introduction to operations research and analysis and quantitative techniques. The student is provided hands-on programming experience with a remote, time-sharing computer terminal using the BASIC programming language.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in automated information systems (5/84). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in data processing principles (5/77).

DD-1404-0001

SENIOR MILITARY CRYPTOLOGIC SUPERVISORS

Course Number: CY-200.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 7 weeks (240–250 hours).

Exhibit Dates: 8/71–Present.

Objectives: To train mid-career cryptological noncommissioned and warrant officers to supervise communication, intelligence and other pertinent resources vital to U.S. national security.

Instruction: Lectures, problem solving seminars, tours and student presentations concerning future roles and technical requirements for supervisory positions in the security community. Subject areas include seminar in contemporary management concepts, problem solving, and decision making techniques; roles in the intelligence community; resource allocation decisions; operational management philosophies; processes involved with collection and reporting of intelligence and communications security.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in communication to include written and oral skills (3/82); in the upper-division baccalaureate category, 2 semester hours in field experience in applied electronic systems management to include intelligence report preparation and analysis, electronics systems operations, and communications security, 1 in general management to include facilities management, logistics management, personnel supervision and office practices, 1 in political science to include political geography and U.S. government (3/82).

DD-1404-0002

MILITARY OFFICER ADVANCED CRYPTOLOGIC

Course Number: CY-500.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 7 weeks (240–250 hours).

Exhibit Dates: 4/71–1/90.

Objectives: To train cryptologic personnel to manage or supervise communication, intelligence and other pertinent resources vital to U.S. national security.

Instruction: Lectures, seminars, self-paced studies, tours, and student presentations concerning methods, sources, processes and techniques used in managing the national signal intelligence and communications security mission. Subject areas include National Security Agency support of military operations, processes involved with collection and reporting of intelligence information; roles in the intelligence community; communications security; and a technical elective.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in political science to include political geography and U.S. government (3/82); in the graduate degree category, 2 semester hours in intelligence systems management to include intelligence collection, intelligence analysis and communications security, 1 in political science to include political geography and U.S. government. NOTE: the credit in political science is to be granted in either the upper division or graduate category but not in both (3/82).

DD-1404-0003

NATIONAL SENIOR CRYPTOLOGIC

Course Number: CY-600.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 7 weeks (240–250 hours).

Exhibit Dates: 5/67–1/90.

Objectives: To develop senior-level intelligence personnel at the national level in all aspects of the management and operations of intelligence functions vital to the U.S. national security.

Instruction: Lectures, seminars, case studies, visiting speakers, tours and student presentations concerning the intelligence community and its operations. Subject areas include fundamentals of cryptology, the relationship of the National Security Agency to the intelligence community, the intelligence operational process, cryptologic operations and management at the executive level, the National Security Agency support of military operations, communications security, and the national security effort.

Credit Recommendation: In the graduate degree category, 3 semester hours in intelligence management at the executive level, 2 in managerial economics to include resource allocation and international trade, finance and economic affairs, 1 in political science to include political geography, legislative affairs, U.S. government, strategic planning and policy studies (3/82).

DD-1404-0004

NATIONAL COMMUNICATIONS SECURITY (COMSEC)

Course Number: CY-300.
Location: National Cryptologic School, Ft. Meade, MD.
Length: 2 weeks (80 hours).
Exhibit Dates: 8/68-1/90.

Objectives: To prepare senior-level intelligence personnel in policy and technical requirements necessary for planning communications systems security.

Instruction: Lectures, question and answer sessions, tours and demonstrations. Subject areas include communications security operational processes, security policy and doctrine, the threat to U.S. communications, relation of communications security to other public and private sectors.

Credit Recommendation: In the graduate degree category, 1 semester hour in communications security management at the executive level plus one additional hour based on departmental interview (3/82).

DD-1404-0005

CRYPTOLOGIC SKILLS FOR NONCOMMISSIONED OFFICERS (NCO)
(Cryptologic Course for Service Supervisors)
(Cryptologic Skills for Cryptologic Management Personnel)

Course Number: CY-155.
Location: National Cryptologic School, Ft. Meade, MD.
Length: 21 weeks (695-825 hours).
Exhibit Dates: 1/71-1/90.

Objectives: To provide mid-level noncommissioned officers with the skills and knowledge necessary for key positions in cryptologic operations.

Instruction: Lectures, demonstrations, self-paced instruction and practical exercises. Subjects include collection operations, cryptanalysis, traffic analysis, technical reporting and conduct of briefings.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in telecommunications and cryptanalysis, 3 in technical writing, 1 in public speaking (3/82).

DD-1406-0001

DEFENSE MAPPING SCHOOL INSTRUCTOR

Course Number: 421-8280.
Location: Defense Mapping School Off-site, Ft. Belvoir, VA; Defense Mapping School Off-site, Washington, DC; Defense Mapping School Off-site, St. Louis, MO; Defense Mapping School Off-site, Kansas City, MO; Defense Mapping School Off-site, San Antonio, TX; Defense Mapping School Off-site, Louisville, KY; Defense Mapping School Off-site, Providence, RI; Defense Mapping School Off-site, Cheyenne, WY.
Length: 1-2 weeks (55 hours).
Exhibit Dates: 5/81-1/90.

Objectives: To provide supervisors and instructional personnel with basic technical communication procedures, methods, and techniques.

Instruction: Course is designed to familiarize supervisors and instructors with the tools, methods, and techniques utilized in the technical instructional process. The course includes task analysis and course outline development, and establishment of training objectives and instructional methods to include lectures, conferences, and demonstration techniques. It requires effective utilization of training aids and effective communication techniques.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical communication or technical instructor procedures (5/81); in the upper-division baccalaureate category, 3 semester hours in elementary or secondary education or teacher training. Credit is to be granted in either the lower division or upper division category as appropriate but not in both (5/81).

DD-1408-0001

DEFENSE SECURITY ASSISTANCE MANAGEMENT CORE

Course Number: SAM-C-11.
Location: Defense Institute of Security Assistance, Wright-Patterson AFB, OH.
Length: 2 weeks (112 hours).
Exhibit Dates: 10/77-1/90.

Objectives: To provide an understanding of security assistance management from a national policy level through implementation by responsible agencies with emphasis on attendant planning and programming of the process.

Instruction: Instruction includes United States involvement in security assistance, its purpose, nature, basis, authority and current programs as they relate to government contracting and procurement management. The methods of instruction include lecture, case studies, simulator exercises and interaction with practitioners in the field.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (11/78)

DD-1408-0002

PROGRAM MANAGEMENT

Course Number: None.
Location: Defense Systems Management College, Ft. Belvoir, VA.
Length: 20 weeks (393-499 hours).
Exhibit Dates: 1/73-1/90.

Objectives: To offer managers from the government, the military and industry the skills and knowledge to successfully manage defense systems acquisition programs.

Instruction: Lectures, discussions and cases cover the following areas: defense program and project management including program cost management, contract management, procurement policy and logistics; production and operations management including quantitive methods; general management and organizational behavior; and managerial finance and accounting.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in production and operations management, 2 in managerial finance, and 1 in general management (4/80); in the graduate degree category, 9 semester hours in defense program and project management (If the student has already completed the course, Program Management for Functional Managers (Program Management for Contract Administration), only 6 hours additional credit is recommended) (4/80).

DD-1408-0003

INDUSTRY FINANCIAL MANAGEMENT

Course Number: None.
Location: Defense Systems Management College, Ft. Belvoir, VA.
Length: 2 weeks (60 hours).
Exhibit Dates: 1/75-5/81.

Objectives: The course provides the participant with an introduction to basic financial analysis.

Instruction: The course provides an overview of finance and managerial accounting, emphasizing the case approach. Topics covered include financial statement analysis, cost accounting, capital budgeting and contract pricing.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in finance and managerial accounting (4/80).

DD-1408-0004

PROGRAM MANAGEMENT FOR FUNCTIONAL MANAGERS
(Program Management for Contract Administration)

Course Number: None.
Location: Defense Systems Management College, Ft. Belvoir, VA.
Length: 4 weeks (120 hours).
Exhibit Dates: 12/78-7/83.

Objectives: To introduce contract administrators to program management systems.

Instruction: Lectures, discussion and cases in defense program and project management, systems acquisition, and functional management.

Credit Recommendation: In the graduate degree category, 3 semester hours in defense program and project management (4/80).

DD-1408-0005

DEFENSE MANAGEMENT SYSTEMS

Course Number: P-16-2002; P-00-3306.
Location: Defense Resources Management Education Center, Naval Postgraduate School, Monterey, CA.
Length: 4 weeks (105 hours).
Exhibit Dates: 1/70-1/90.

Objectives: To provide officers with an introduction to the basic principles of management.

Instruction: Lectures in resource management, program budgeting, management accounting, systems analysis, marginal analysis, and cost effectiveness; emphasis is placed on the analytical aspects of management, including requirement studies, systems analyses, cost effectiveness and marginal analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in management ((2/74).

DD-1408-0006

DEFENSE RESOURCES MANAGEMENT
(Defense Management Systems)
(Navy Management Systems)

Course Number: S-00-3306; L5OZN6916-000; P-00-3306.
Location: Defense Resources Management Education Center, Naval Postgraduate School, Monterey, CA; Navy Management Center, Naval Postgraduate School, Monterey, CA.
Length: 4 weeks (105 hours).
Exhibit Dates: 1/70-Present.

Objectives: To provide officers with an introduction to the basic principles of management.

Instruction: Lectures in resource management, program budgeting, management accounting, systems analysis, marginal analysis, and cost effectiveness; emphasis placed on the analytical aspects of management, including requirement studies, systems analyses, cost effectiveness, and marginal analysis.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in management (1/87).

DD-1511-0001

National Security Management
(Correspondence/Nonresident/Seminar Course of the National Defense University)
(Correspondence Course of the Industrial College of the Armed Forces)

Course Number: None.

Location: National Defense University, Ft. Lesley J. McNair, Washington, DC.; Industrial College of the Armed Forces, Ft. Lesley J. McNair, Washington, DC.

Length: 52-104 weeks.

Exhibit Dates: *Version 1:* 9/90-Present. *Version 2:* 9/83-8/90. *Version 3:* 9/78-8/83. *Version 4:* 5/71-8/78.

Objectives: To train officers in economic and industrial aspects of national security and the management of resources under all conditions and in the context of national and world affairs.

Instruction: *Version 1:* Pending evaluation. *Version 2:* Course is designed to promote an understanding of the strategic, economic, and industrial aspects of national security and management of the nation's resources under varying circumstances and conditions. Unit I covers the environment of national security. This unit examines fundamental concepts of national security relating to the domestic and international scene. Provides a framework for understanding the problems confronting the United States as an international actor. It discusses economic theories, policies, and issues in the context of resource adequacy for defense and assesses the position of the United States in the world economy. Also explains how the political system influences the Nation's conduct in world affairs. Unit II, resources of defense, analyzes major resources such as energy, transportation, and technology, and assesses their importance to the U.S. economy and national security. It discusses increased U.S. dependence on foreign sources for resources critical to national security. This unit also examines the development and role of U.S. industry and the problem of foreign competition in markets once dominated by the United States. Unit III addresses defense decision making. It studies the main instruments and processes of the federal government involved in the formulation of national security policies and in decision making. Also this unit explains the organization and management of the Defense Department, the systems and processes involved in determining requirements, and the decision-making procedures on resource allocation. Unit IV concerns executive management. It provides a synthesis of the traditional and newer approaches to management, with an emphasis on human resource management. The unit assesses quantitative and qualitative factors relating to the work force with particular emphasis on manpower for defense. It examines the acquisition process of major defense systems, the management of defense systems and the management of defense logistics. This unit analyzes U.S. preparedness issues and mobilization planning. The program's four units each conclude with a proctored closed-book objective-type examination covering approximately five books. The books, texts, and anthologies are the vehicle for instruction. Unit III also requires a written report of 3,000 to 3,500 words. *Version 3:* Course is designed to promote an understanding of the strategic, economic, and industrial aspects of national security and management of the nation's resources under varying circumstances and conditions. The course covers the following: The International Environment: analysis of the basic institutions and forces that shape world environment influencing United States national security policymaking and decision making. Emphasis is given to U.S. participation in international economic and financial activities after an introductory survey of the state as an international actor and patterns of international competition and cooperation. The Domestic Environment: analysis of the dynamics of the national economy that influence national security policy decisions. The emphasis is on current trends of social and economic institutions including those relating to natural resource management and domestic economic-social problems. The National Security Structure and Policy Formulation: survey of the institutions and processes involved in national security policymaking and decision making. The discussion includes the overall national security policymaking organization of the Federal Budget and National Defense, the system in operation in the field of international arms transfers and a case study of the president and crisis management (Cuban missile crisis). Management Concepts and Practices and Management Decision Making: a brief survey of major concepts and issues of modern management. Considerable emphasis is placed on behavioral concepts and upon organizational dynamics and developments. Attention is also given to problem formulation and statistical tools of decision making. National Security Management: a survey of the legislation, organizational structure and procedures of defense resource management. Included in the course are concentrations on systems acquisitions, procurement, supply, manpower and transportation. Special attention is given to the policy area of science, technology, research and development. *Version 4:* Individualized readings and student research in economic and industrial aspects of national security and the management of resources under all conditions and in the context of national and world affairs, divided into four course blocks as follows: (1) Includes the national security structure, the environment of national security, the world in ferment, national urban problems, and concepts and practice of management. (2) Includes elements of defense economics, human resources for national strength, natural and energy resources, the industrial sector, transportation as the nation's lifeline, and the public utilities (gas, electricity, and telecommunications). (3) Includes economic policies for national strength, emergency economic stabilization, U.S. foreign economic policies, defense organization and management, requirements for national defense, and military systems analysis. (4) Includes defense military manpower, the national assets of science and technology, production for defense, procurement, supply management, and national aerospace programs.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the upper-division baccalaureate category, 3 semester hours in U.S. foreign policy studies, 3 in U.S. national security policies and processes, 3 in introduction to economic principles and problems, 2 in 20th century American economic history, 2 in management, 1 in American national political institutions (1/85); in the graduate degree category, for those students in the Seminar Program achieving a rating of outstanding, 3 semester hours in policies and procedures of the national security establishment, and 3 in U. S. public policy (1/85). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in introduction to management and management decision making, 2 in introduction to international relations, 2 in national security processes, 4 in public policy (the domestic environment of national security) (7/80); in the graduate degree category, 3 semester hours in management and management decision making and 3 in policies and procedures of the national security establishment. Graduate credit is for those students with a rating of outstanding, and is not to be in addition to the upper division credit recommended. *Version 4:* In the upper-division baccalaureate category, for students who complete the program WITH DISTINCTION—or based upon the admitting institution's evaluation of the applicant's work—3 semester hours in political science (The U.S. in Contemporary World Affairs), 3 in social science (The Social and Economic Bases of the U.S. National Security), 3 in management (Defense Policy and Management) (8/74); in the graduate degree category, 3 semester hours for completion of the entire program WITH DISTINCTION—or based upon the admitting institution's evaluation of the applicant's work (8/74). NOTE: Credit recommendation is based on an on-site evaluation. Recommendations of credit are maximum figures. The amount actually accepted for transfer depends upon the applicant's future goals and the regulations of the admitting institution on transfer credit.

DD-1511-0002

National War College

Course Number: None.

Location: National Defense University, Ft. Lesley J. McNair, Washington, DC; National War College, Ft. Lesley J. McNair, Washington, DC.

Length: 40-45 weeks.

Exhibit Dates: *Version 1:* 8/90-Present. *Version 2:* 1/80-7/90. *Version 3:* 8/73-12/79. *Version 4:* 8/70-7/73. *Version 5:* 8/56-7/70. *Version 6:* 8/54-7/56.

Objectives: The National War College provides an educational experience intended to improve the knowledge and expertise of a practitioner in the field of U.S. Foreign Affairs and National Security Affairs.

Instruction: *Version 1:* Pending evaluation. *Version 2:* This course is presented through lectures, seminars, readings, and independent student research in international relations and United States foreign policy and national security studies.The core curriculum is divided into six units: 1) Executive decision making and security challenges; 2) The art of war; 3) The international security environment; 4) The United States policymaking studies including (a) politics, policy, and resource allocations, and (b) policy planning and national security decision making; 5) Major powers and regions including the Soviet Union, Asia, Western Europe, the Middle East, Sub-Saharan Africa, and Latin America; and 6) United

States defense policy and military strategy. A two-week overseas field trip to one of the regions covered in the fifth unit is part of the course. A variety of electives related to the core curriculum is offered. *Version 3:* Lectures, seminars, readings, and student research in military and national security affairs and international relations. The Core Curriculum is divided into five blocks as follows: (1) The Foundations of National Security; (2) Domestic Environment and National Security; (3) National Security Problems and the Decision Making Process; (4) Military Strategy and Strategic Posture; and (5) Reassessment of National Security Problems. Area studies include: (1) Canada, Europe, and the U.S.S.R.; (2) East Asia and the Western Pacific; (3) South Asia, the Middle East, and Africa; and (4) Latin America. Area electives include courses on Europe, the Far East, Africa, Latin America, or the Mid-East. The course titled National Security Analyses includes an intensive study of politico-military economic, social, psychological, and geographic factors for an analysis of critical issues affecting U.S. national security policies and objectives in Europe, the Middle East and South Asia, Africa, the Far East, and Latin America; an overseas trip to one of these areas for observation is part of the course. *Version 4:* Lectures, seminars, readings, and student research in military and national security affairs and international relations. The Core Curriculum is divided into five blocks as follows: (1) The Foundations of National Security; (2) Domestic Environment and National Security; (3) National Security Problems and the Decision-Making Process; (4) Military Strategy and Strategic Posture; and (5) Reassessment of National Security Problems. Area studies include: (1) Canada, Europe, and the U.S.S.R.; (2) East Asia and the Western Pacific; (3) South Asia, the Middle East, and Africa; and (4) Latin America. Area electives include courses on Europe, the Far East, Africa, Latin America, or the Mid-East. The course titled National Security Analyses includes an intensive study of politico-military economic, social, psychological, and geographic factors for an analysis of critical issues affecting U.S. national security policies and objectives in Europe, the Middle East and South Asia, Africa, the Far East, and Latin America; an overseas trip to one of these areas for observation is part of the course. *Version 5:* Lectures, seminars, readings, and student research in military and national security affairs and international relations. The Core Curriculum is divided into five blocks as follows: (1) The Foundations of National Security; (2) Domestic Environment and National Security; (3) National Security Problems and the Decision-Making Process; (4) Military Strategy and Strategic Posture; and (5) Reassessment of National Security Problems. Area studies include: (1) Canada, Europe, and the U.S.S.R.; (2) East Asia and the Western Pacific; (3) South Asia, the Middle East, and Africa; and (4) Latin America. Area electives include courses on Europe, the Far East, Africa, Latin America, or the Mid-East. The course titled National Security Analyses includes an intensive study of politico-military economic, social, psychological, and geographic factors for an analysis of critical issues affecting U.S. national security policies and objectives in Europe, the Middle East and South Asia, Africa, the Far East, and Latin America; an overseas trip to one of these areas for observation is part of the course. *Version 6:* Lectures, seminars, readings, and student research in military and national security affairs and international relations. The Core Curriculum is divided into five blocks as follows: (1) The Foundations of National Security; (2) Domestic Environment and National Security; (3) National Security Problems and the Decision-Making Process; (4) Military Strategy and Strategic Posture; and (5) Reassessment of National Security Problems. Area studies include: (1) Canada, Europe, and the U.S.S.R.; (2) East Asia and the Western Pacific; (3) South Asia, the Middle East, and Africa; and (4) Latin America. Area electives include courses on Europe, the Far East, Africa, Latin America, or the Mid-East. The course titled National Security Analyses includes an intensive study of politico-military economic, social, psychological, and geographic factors for an analysis of critical issues affecting U.S. national security policies and objectives in Europe, the Middle East and South Asia, Africa, the Far East, and Latin America; an overseas trip to one of these areas for observation is part of the course.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the upper-division baccalaureate category, 30 semester hours to be apportioned as follows: 6 semester hours in international relations, 12 in United States foreign policy studies , and 12 in United States national security policies and processes (5/85); in the graduate degree category, 1-9 semester hours in international relations, United States foreign policy studies, and United States national security policies and processes, and 1-3 for research completed during the course of the program, all to be granted based on the receiving institution's review of the student's written materials. It is recommended that the receiving institution request an evaluation from the Dean of Faculty and Academic Programs, National Defense University, National War College, Ft. Lesley J. McNair, Washington, DC 20319. *Version 3:* In the upper-division baccalaureate category, 30 semester hours—to be apportioned by the receiving institution—in the areas of history, political science, international relations, and management (8/74); in the graduate degree category, for the core curriculum, 6 semester hours in foreign policy and security affairs, 3 in political science; for one of the area courses plus one related elective, the overseas trip, and the synthesis course, 6 semester hours for students specializing in foreign policy and security affairs OR 3-6 hours for students in a more general program of comparative government or area studies based on the receiving institution's review of the student's records; for research and thesis, 0-6 semester hours; for any two of the following electives, 3 semester hours if relevant to the student's program specialization: National Security and Problems of International Law, Strategy of Arms Control, Problems of Developing Countries and U.S. Security, Current Issues in Defense Policy, U.S. Society and National Security, Current Economic Problems, Vietnam: A Beginning Reassessment, the Energy Issue: Problems and Prospects, of Futuristics (8/74). NOTE: Credit granted for theses should be contingent upon the graduate school's evaluation of the research paper. Recommendations of credit are maximum figures. The amount actually accepted for transfer depends upon the applicant's future academic goals and the regulations of the admitting institution on transfer credit. *Version 4:* In the upper-division baccalaureate category, 30 semester hours—to be apportioned by the receiving institution—in the areas of history, political science, international relations, and management (8/74); in the graduate degree category, 3 semester hours in theory and practice of international relations, 3 in U.S. national security policy, 3 in international relations/area studies (specific area to be determined by the geographical region of the student's trip), 0-6 in research and thesis, 3 upon completion of any two of the following elective courses: Current Reinterpretations of Marxist Thought, History of Strategic Thought, or International Law (8/74). NOTE: Credit recommendation is based on an on-site evaluation. Credit granted for theses should be contingent upon the graduate school's evaluation of the research paper. Recommendations of credit are maximum figures. The amount actually accepted for transfer depends upon the applicant's future academic goals and the regulations of the admitting institution on transfer credit. *Version 5:* In the upper-division baccalaureate category, 15 semester hours in political science (including international relations), 9 in recent and contemporary history, 3 in business administration (8/74). *Version 6:* In the upper-division baccalaureate category, 15 semester hours in political science (including international relations), 9 in recent and contemporary history, 3 in business organization and management, 3 in speech (12/68).

DD-1511-0003

INDUSTRIAL COLLEGE OF THE ARMED FORCES (RESIDENT PROGRAM)

Course Number: None.

Location: National Defense University, Ft. Lesley J. McNair, Washington, DC; Industrial College of the Armed Forces, Ft. Lesley J. McNair, Washington, DC.

Length: 40-45 weeks.

Exhibit Dates: *Version 1:* 8/90-Present. *Version 2:* 1/80-7/90. *Version 3:* 8/69-12/79. *Version 4:* 8/66-7/69. *Version 5:* 8/65-7/66. *Version 6:* 8/64-7/65. *Version 7:* 8/63-7/64. *Version 8:* 8/54-7/63.

Objectives: To teach the political, military, social, economic, and industrial aspects of national security, resource management, and the command, staff, and policymaking functions of the national and international security structure.

Instruction: *Version 1:* Pending evaluation. *Version 2:* This course consists of lectures, simulations, seminars, field studies, and student research in aspects of United States national security and resource management. The core curriculum is divided into five phases as follows: 1) Public executive prospectives; 2) National security and mobilization management; 3) Manpower resources management; 4) Materiel resources management; and 5) Joint training exercises. Field trips to domestic and foreign industrial sites are included in Phase 4. A variety of electives relating to the core curriculum is offered. *Version 3:* Lectures, practical exercises, seminars, readings, field studies, and student research in the political, military, social, economic, and industrial aspects of national security, in resources management, and in national and world affairs. *Version 4:* Lectures, practical exercises, seminars, readings, field studies, and student research in the political, military, social, economic, and industrial aspects of national security, in resources management, and in national and world affairs. *Version 5:* Lectures, practical exercises, seminars, readings, field studies, and student research in the political, military, social, economic, and industrial aspects of national security, in resources management, and in national and world affairs. *Version 6:* Lectures, practical exercises, seminars, readings, field studies, and student research in the political, military, social, economic, and industrial aspects of national security, in resources management, and in national and world affairs. *Version 7:* Lectures, practical exercises, seminars, readings, field studies, and student research in the political, military, social, economic, and industrial aspects of national security, in resources management, and in national and world affairs. *Version 8:* Lectures, practical exercises, seminars, readings, field studies, and student research in the political, military, social, economic, and industrial aspects of national security, in resources management, and in national and world affairs.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to economics (5/85); in the upper-division baccalaureate category, 12 semester hours in United States foreign policy and national security studies, 6 in international relations, 4 in labor and manpower resource planning, 2 in transportation planning, 4 in industrial structure and process, and 0-6 additional credit in the appropriate field for the electives course based on the receiving institution's review of the transcript and additional information from the Dean, Industrial College of the Armed Forces, National Defense University, Ft. Lesley J. McNair, Washington, DC 20319 (5/85); in the graduate degree category, 1-9 semester hours in international relations, manpower materiel planning, United States national security studies; and 1-3 for research completed during the course, all to be granted based on the receiving institution's review of the student's written materials. It is recommended that the receiving institution request a transcript and additional information from the Academic Dean, Industrial College of the Armed Forces, National Defense University, Ft. Lesley J. McNair, Washington, DC 20319 (5/85). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in political science, 3 in international relations, 3 in social science, 3 in national economic problems and policies, 3 in principles of economic analysis, 3 in quantitative analysis, 6 in management, 3 in public administration, 0-3 in research and thesis (exact amount to be determined by institutional review) (8/74); in the graduate degree category, 2 semester hours in national security, 2 in aspects of national strength, 2 in international relations, 2 in management of industrial resources, 2 in governmental management, 2 in national economic problems and policies, 0-6 in research and thesis (8/74). NOTE: Credit granted for theses should be contingent upon the graduate school's evaluation of the research paper. Recommendations of credit are maximum figures. The amount actually accepted for transfer depends upon the applicant's future academic goals and the regulations of the admitting institution on transfer credit. *Version 4:* In the upper-division baccalaureate category, 12 semester hours in political science (including international relations), 12 in business administration, 3 in recent history, 6 in economics, 3 in geography, 3 in general physics, 3 in mathematics (8/74). *Version 5:* In the upper-division baccalaureate category, 12 semester hours in political science, 9 in business administration, 3 in recent history, 3 in economics, 3 in geography, 3 in general physics, 3 in mathematics (12/68). *Version 6:* In the upper-division baccalaureate category, 12 semester hours in political science (including international relations), 6 in business administration, 3 in recent history, 3 in economics, 3 in geography (12/68). *Version 7:* In the upper-division baccalaureate category, 12 semester hours in political science (including international relations), 6 semester hours in business administration, 3 in speech, 6 in recent history, 3 in economics (12/68). *Version 8:* In the upper-division baccalaureate category, 15 semester hours in political science (including international relations), 3 in business organization and management, 3 in speech, 9 in recent and contemporary history (12/68).

DD-1511-0004

1. POSTGRADUATE INTELLIGENCE COURSE (Defense Intelligence Course)
2. DEFENSE INTELLIGENCE COURSE

Course Number: *All Versions:* None.

Location: Defense Intelligence School, Naval Station (Anacostia Annex), Washington, DC.

Length: *Version 1:* 33 weeks (1325 hours). *Version 2:* 38 weeks (1425-1504 hours).

Exhibit Dates: *Version 1:* 3/72-7/81. *Version 2:* 1/63-2/72.

Objectives: To train officers in intelligence operations and techniques, and management concepts and techniques as they apply to intelligence resources, processes, and information systems, OR in intelligence procedures, operations, and structures as they relate to international action.

Instruction: Lectures, practical exercises, readings, and individualized study in intelligence operations and techniques and in management concepts and techniques as they apply to intelligence resources, processes and information systems at various levels. The Postgraduate Intelligence course changed to a multiple course curriculum in 1978. Students should be asked to submit an official transcript of courses completed after September 1978. The Defense Intelligence School is accredited by the Commission on Higher Education of the Middle States Association of Colleges and Schools.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in modern history, 6 in political science, credit in geography on the basis of institutional examination (upon completion of phases one and two), 3 in principles of management (upon completion of phase three) (8/74); in the graduate degree category, 6 semester hours in international relations or political science, OR, if the applicant's field of study in graduate school is in the area of economics or political geography, 4 semester hours in international relations or political science (8/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in modern history, 6 in political science, 3 in geography (12/68); in the graduate degree category, 6 semester hours in international relations or political science, OR, if the applicant's field of study in graduate school is in the area of economics or political geography, 4 semester hours in international relations or political science (8/74).

DD-1511-0005

INTER-AMERICAN DEFENSE COLLEGE

Course Number: None.

Location: Inter-American Defense College, Ft. Lesley J. McNair, Washington, D.C.

Length: 52 weeks.

Exhibit Dates: 7/65-Present.

Objectives: To function as a military institution for advanced studies, with the purpose of preparing military personnel and civilian officials of the American States through the study of the Inter-American System and the political, social, economic and military factors that constitute essential elements for the defense of the hemisphere.

Instruction: The curriculum includes a review of basic theoretical topics in the classical areas of power and general studies of the current world situation, thus providing an adequate framework for an extensive analysis of the hemisphere's situation in the light of political, social, economic and military factors. The students learn and practice, in group discussions, the methodology of international cooperation in basic aspects of continental security planning at higher levels of general and military strategy. The modes of instruction include numerous lectures by outside experts, seminars and symposia for discussion of the materials presented, study committees and the preparation of individual research papers.

Credit Recommendation: In the graduate degree category, 6 semester hours in international relations for students rated "very good" or "outstanding" (11/76).

DD-1511-0006

RESERVE COMPONENTS NATIONAL
SECURITY SEMINAR

Course Number: None.

Location: National Defense University, Vandenberg AFB, CA; National Defense University, Naval Air Station, Pensacola, FL; National Defense University, Ft. Bragg, NC; National Defense University, Ft. Lesley McNair, Washington, DC.

Length: 2 weeks (60 hours).

Exhibit Dates: 1/76-Present.

Objectives: To present and analyze issues of national security and foreign policy.

Instruction: This seminar includes global intelligence assessment (U.S. policy perspective); U.S. security policy (East Asia, Western Europe, and the Soviet Union, the Middle East and the developing countries); arms trade and arms acquisitions; defense analysis including a case study; DoD Management; ocean policy; economic issues; human and industrial resources; energy problems; and simulation exercise.

Credit Recommendation: Credit is not recommended for the course (7/87).

DD-1512-0001

1. DEFENSE EQUAL OPPORTUNITY MANAGEMENT INSTITUTE
2. DEFENSE EQUAL OPPORTUNITY MANAGEMENT INSTITUTE
3. DEFENSE EQUAL OPPORTUNITY MANAGEMENT INSTITUTE
4. DEFENSE RACE RELATIONS INSTITUTE
5. DEFENSE RACE RELATIONS INSTITUTE

Course Number: None.

Location: Defense Equal Opportunity Management Institute, Patrick AFB, FL; Defense Race Relations Institute, Patrick AFB, FL.

Length: *Version 1:* 16 weeks (590 hours). *Version 2:* 16 weeks (590 hours). *Version 3:* 16 weeks (585 hours). *Version 4:* 7-11 weeks (184-425 hours). *Version 5:* 7 weeks (205 hours).

Exhibit Dates: *Version 1:* 4/86-Present. *Version 2:* 1/83-3/86. *Version 3:* 6/78-12/82. *Version 4:* 8/74-5/78. *Version 5:* 10/72-7/74.

Objectives: To provide students with a foundation of knowledge on intergroup relations, cultural specificity, and an awareness of those processes that form social opinion. The program is also designed to provide participantswith the ability to function as instructors in race relations and to provide them with management, planning and applications skills needed in maintaining effective institutional human relations programs.

Instruction: *Version 1:* Pending evaluation. *Version 2:* Lectures, audio visuals, guest speakers, seminars, incident process techniques, role play, student practicums and student presentations are employed as they apply to equal opportunity officers in Department of Defense activities. The program prepares students as instructors, facilitators, EEO staff advisors, and consultants in policy and procedures and conflict intervention, knowledgable discussants on issues of race, women's issues, ethnic and national origin concerns, and related issues adversly affecting organizational effectiveness and mission. *Version 3:* Lectures, seminars, simulation/interactional techniques, case study, role play and games in the theory and practice of human relations and the application and management of human relations programs. Program takes multidisciplinary approach to minority and behavioral studies and instructional methodology. Program is designed to prepare the participants as instructors and consultants in race relations, equal opportunity and women's issues, and organizational effectiveness as it as it relates to discriminatory policies procedures and practices. *Version 4:* Lectures, seminars, simulation/interactional techniques, case study and field laboratory (inner city visitation) in the theory and practice of human relations and the application and management of human relations programs. The program takes a multi-disciplinary approach to minority and behavioral studies and instructional methodology. Participants are prepared as instructors in race relations. *Version 5:* Lectures, seminars, readings, and discussions in intergroup relations, social processes, behavioral sciences, minority studies, and instructional techniques, divided into five course blocks as follows: (1) The Individual in Social Interaction, including psychological theories of the self, and defense mechanisms; social significance of attitudes and behavior; stereotypes, the psychology of rumor; and race and individual differences. (2) Racism and Ways to Combat It, including military racial disorders, the Kerner Commission report, racism in U.S. history and contemporary life; the nature of prejudice; signs and symbols in communication and their role in racial conflict; institutional racism; racial issues (law enforcement, housing, employment, and education); racial polarization and separation; new white consciousness, contemporary white American culture; and strategies for combatting racism. (3) Group Dynamics, including introduction to group processes, group formation, techniques of facilitating group performance, the individual and the group, group goals and norms; group problems (members and feelings, recognition of hidden agendas within a group, methods of approach); leadership functions in groups; recognition of goal types; conditions affecting cohesiveness and conformity; and intergroup relations, examined through discussion on problems of communication, minority participation in policy and programs, changing the practice of desegregation, and establishing the values of integration. (4) Educational Techniques, including guided discussion as a teaching method; information processing limitations; use of selective exposure, interpretation (attention), and retention in reinforcing attitudes and opinions; use of sociodrama as a teaching technique; lesson planning and educational presentations; student teaching exercises; instructional aids; and creative teaching. (5) Minority Studies, including Afro-American history, migrant group, Appalachian cultures, Indian culture and contemporary thought, and Asian-American history and contemporary situation; history of blacks in the military, contemporary black thought, and inner-city problems. Participants are prepared as instructors in race relations.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the upper-division baccalaureate category, 3 semester hours in sociology of women, 3 in culture and society, 3 in racial and interethnic relations, 3 in instructional methodology, and 3 in interpersonal communications; in the graduate degree category, 3 semester hours in organizational effectiveness, 3 in organizational communication and 3 in interpersonal relations and conflict resolution (3/84). *Version 3:* In the upper-division baccalaureate category, 3 semester hours in sociology of women, 3 in culture and society, 3 in interracial relations and interethnic relations, 3 in organizational effectiveness (9/79); in the graduate degree category, 3 semester hours in interpersonal communication, 3 in instructional methodology (9/79). *Version 4:* In the upper-division baccalaureate category, 18 semester hours in social and behavioral science, to be assigned among the following subject areas: applied psychology, group dynamics, intergroup relations, communications theory, history of minorities and ethnic groups, and instructional methodology (5/76); in the graduate degree category, 9 semester hours in social and behavioral science, to be assigned among the following subject areas: applied psychology, group dynamics, intergroup relations, communications theory, history of minorities and ethnic groups, and instructional methodology (5/76). *Version 5:* In the upper-division baccalaureate category, 4 semester hours in behavioral science laboratory, and 6 in social and behavioral science, to be assigned in any of the following disciplines: applied psychology, group dynamics, intergroup relations, or history of minorities and ethnic groups (8/74); in the graduate degree category, 4 semester hours in behavioral science laboratory (8/74). NOTE: Recommendations of credit are maximum figures. The amount of credit actually accepted for transfer depends upon the applicant's future academic goals and the regulations of the admitting institution on transfer credit.

DD-1512-0002

Defense Equal Opportunity
Management Institute
Nonresident/Resident

Course Number: None.

Location: Defense Equal Opportunity Management Institute, Patrick AFB, FL.

Length: Maximum 52 weeks.

Exhibit Dates: 6/79–Present.

Objectives: To provide students with a foundation of knowledge on intergroup relations, cultural specificity, and an awareness of those processes that form social opinion. The program is also designed to provide participants with the skills to serve as instructors in race relations and to provide them with management, planning, and applications skills needed in maintaining effective institutional human relations programs.

Instruction: The program prepares students as instructors, facilitators, EEO staff advisors, and consultants in policy and procedures of conflict intervention, knowledgable discussants on issues of race, women's issues, ethnic and national origin concerns, and related issues adversly affecting organizational effectiveness and mission. Interrelated subject areas include individual, group, and organizational behaviors; equal opportunity skills; study of discrimination based on race, gender, or cultural/ethnic differences on individual, institutional, and cultural levels; study of cultural, historical, and socio-psychological perspectives as well as contemporary status of American minority groups.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in sociology of women, 3 in culture and society, 3 in interracial and interethnic relations, 3 in interpersonal communications, 3 in instructional methodology (3/84); in the graduate degree category, 3 semester hours in interpersonal relations and conflict resolution, 3 in organizational effectiveness and 3 in organizational communication (3/84).

DD-1601-0001

Basic Photogrammetric Cartographic
Techniques

Course Number: 411-204.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 9 weeks (293 hours).

Exhibit Dates: 5/72–8/78.

Objectives: To train enlisted personnel to compile and revise planimetric, topographic maps and photomaps, using drafting instruments and plotting devices.

Instruction: Lectures and practical exercises in the compilation and revision of planimetric, topographic maps and photomaps, including compilation base and radial triangulation, map compilation and map revision, aerial photo mosaic, color separation, maintenance of cartographic equipment and facilities, DMA topographic center tour security, construction of controlled photomosaic, transfer of revision data to compilation base, and delineation of aerial photography.

Credit Recommendation: In the vocational certificate category, 6 semester hours in map and mosaic making (5/74); in the lower-division baccalaureate/associate degree category, 5 semester hours in map and mosaic making (5/74); in the upper-division baccalaureate category, 3 semester hours in map and mosaic making (5/74).

DD-1601-0002

Geodetic Surveying

Course Number: 412-82D20; 5ABD22230; 412-101.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 10 weeks (376 hours).

Exhibit Dates: 12/73–11/76.

Objectives: To train enlisted personnel in geodetic surveying.

Instruction: Lectures and practical exercises in geodetic surveying, including the establishment of ground survey control through differential leveling, gravity surveys, traverse, triangulation, and astronomic observation; mapping and charting in the support of weapons systems and other operations; military construction surveys; establishment of control; expedient-road and landing-site planning; and construction-site layout surveys for theater-of-operations construction support.

Credit Recommendation: In the vocational certificate category, 10 semester hours in plane and geodetic surveying (5/74); in the lower-division baccalaureate/associate degree category, 8 semester hours in plane and geodetic surveying (5/74); in the upper-division baccalaureate category, 6 semester hours in plane and geodetic surveying (5/74).

Related Occupation Codes: 82D.

DD-1601-0003

Advanced Geodetic Surveying

Course Number: 4M-710.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 20 weeks (707 hours).

Exhibit Dates: 12/73-11/81.

Objectives: To provide geodetic surveyors with training in advanced geodetic survey techniques.

Instruction: Lectures and practical exercises in advanced geodetic survey techniques, including astronomic observations for longitude, latitude, and azimuth; computing and adjusting geodetic figures, directions, lengths, positions, and differences in elevation; precise instrumentation related to high-order surveys; orientation on analytical point positioning using photogrammetry; vertical control surveys; geodesy and gravity surveys; and map compilation and digital computers.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 15 semester hours in advanced geodetic surveying (5/74); in the upper-division baccalaureate category, 10 semester hours in advanced geodetic surveying (5/74).

DD-1601-0004

Terrain Analysis

Course Number: 491-81Q20; 491-101.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 10 weeks (314 hours).

Exhibit Dates: 10/73-9/80.

Objectives: To provide soils analysts, map compilers, and image interpreters with training in geographic analysis.

Instruction: Lectures and practical exercises in terrain analysis, including principles and techniques of terrain analysis, map reading and land navigation, basic photographic interpretation and cartographic principles, techniques for describing terrain, geologic and hydrologic concepts, amphibious operations planning considerations, evaluation of terrain elements, base development and LOC planning considerations, engineer reconnaissance, engineer applications of photography, and applied terrain analysis.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in terrain analysis (5/74); in the upper-division baccalaureate category, 4 semester hours in terrain analysis (5/74).

Related Occupation Codes: 81Q.

DD-1601-0005

Advanced Photogrammetric Cartographic Techniques

Course Number: 411-205.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 8 weeks (281 hours).

Exhibit Dates: 5/73-4/78.

Objectives: To train noncommissioned officers to perform as photogrammetric-cartographic technicians.

Instruction: Lectures and practical exercises in earth and physical sciences as related to the photogrammetric-cartographic career area, including regional physiography, geodetic datums, horizontal and vertical control, positional evaluation, photographic metrics, projections, grids, photo tilt, photo restitution, structural heights, industrial analysis, photogrammetric equipment, aerial reconnaissance systems, and support functions of photographic and lithographic areas.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in photogrammetric interpretations (5/74); in the upper-division baccalaureate category, 6 semester hours in photogrammetric interpretations (5/74).

DD-1601-0006

Geodetic Computing

Course Number: 412-82E20; 5ABD22231; 412-102.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 11 weeks (378 hours).

Exhibit Dates: 12/72-4/77.

Objectives: To train enlisted personnel in geodetic computing.

Instruction: Lectures and practical exercises in geodetic computing, including comprehensive mathematics review; use of electronic calculators; map reading; computations in grid and declination grid conversions and transformations; grid traverses and electronic distance measurements; grid triangulation, leveling, traverse, and trilateration; astronomic azimuth and position; and adjustment of geometric figures, directions, linelength, and elevation difference from surveyor notes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 12 semester hours in geodetic computations (5/74); in the upper-division baccalaureate category, 8 semester hours in geodetic computations (5/74).

Related Occupation Codes: 82E.

DD-1601-0007

Mapping, Charting, and Geodesy Officer

Course Number: 4M-7915; 4M-F2; 5OZD5724; 4M-701.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 14 weeks (454 hours). *Version 2:* 12 weeks (372 hours).

Exhibit Dates: *Version 1:* 12/77-1/86. *Version 2:* 1/74-11/77.

Objectives: Provides officers and selected civilian personnel with a broad background in programs of topographic, aerospace,and hydrographic operations applied to surveying, remote sensing, cartography, and graphic arts.

Instruction: *Version 1:* Lectures and limited practical exercises in remote sensing, photogrammetric operations, management of cartographic operation, military geographic information, new development in mapping, charting, and geodesy. Background of appropriate technical mathematics is reviewed. Students completing this course would have a background equivalent to up to 6 semester hours in technical mathematics. For the course after 1986, see DD-1601-0021. *Version 2:* Lectures and practical exercises in mapping,charting and geodesy processes, including theory of errors: and MC and G survey, photogrammetric, cartographic,and reproduction operations.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 6 semester hours in cartography, civil engineering, civil engineering technology, geodetic science, photogrammetry or and combination of these. (5/81); in the graduate degree category, 3 semester hours in cartography, civil engineering, engineering management, geodetic science, surveying, or photogrammetry (5/81). Credit is to be granted in either the upper division or the graduate category but not both. *Version 2:* In the lower-division baccalaureate/associate degree category, 9 semester hours in mapping, charting, and geodesy (5/74); in the upper-division baccalaureate category, 6 semester hours in mapping, charting, and geodesy (5/74).

DD-1601-0008

Construction Surveying

Course Number: 412-82B10; 412-82B20; 412-110.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 15 weeks (473 hours). *Version 2:* 11 weeks (362 hours).

Exhibit Dates: *Version 1:* 4/81-8/87. *Version 2:* 7/72-3/81.

Objectives: To train military personnel with a working knowledge of conventional surveying with a special emphasis on problems connected with military construction.

Instruction: Lectures and practical exercises in plane surveying fundamentals, including equipment maintenance, recording procedures, map reading, route selection, one-minute theodolite, engineer transit, horizontal taping, traverse layout, plane traverse computation, engineer dumpy level, differential leveling, trigonometric elevations, planetable surveying, transit-stadia, contour strip map, horizontal curves, road layout, profile and cross-section leveling, profile and grade line plotting, vertical curves, end area, volumes, boundary alignment, slope and grade stakes, site plans and construction drawings, and building utilities and airfield layout. After 1987, see DD-1601-0024.

Credit Recommendation: *Version 1:* In the vocational certificate category, 10 semesters hours in construction surveying or highway surveying (5/81); in the lower-division baccalaureate/associate degree category, 2 semester hours in technical mathematics, 6 in civil surveying and/or civil engineering, 2 in architectural drafting (5/81). *Version 2:* In the vocational certificate category, 10 semester hours in construction surveying (5/74); in the lower-division baccalaureate/associate degree category, 8 semester hours in construction surveying (5/74); in the upper-division baccalaureate category, 6 semester hours in construction surveying (5/74).

Related Occupation Codes: 82B.

DD-1601-0009

Photogrammetric Compilation

Course Number: 411-203; 411-81C30.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 7-8 weeks (248-270 hours).

Exhibit Dates: 6/71-10/81.

Objectives: To train map compilers in the principles and techniques of photogrammetric map compilation including analog and analytical model orientation and stereo compilation techniques.

Instruction: Lectures and practical exercises in the principles and techniques of photogrammetric map compilation, including multiplex stereoplotting equipment, multiplex stereoplotter orientation, reduction printing, stereocompilation, high-precision stereoplotter, stereotriangulation, and special operational subjects.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic photogrammetric compilation (5/81); in the upper-division baccalaureate category, 3 semester hours in advanced photogrammetric compilation (5/81).

Related Occupation Codes: 81C.

DD-1601-0010

BASIC GEODETIC SURVEY
(Geodetic Surveying)
(Basic Geodetic Surveying)

Course Number: 412-101.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 14–18 weeks (450–589 hours).

Exhibit Dates: 2/77–9/87.

Objectives: To provide individuals with the skills and knowledge to establish ground survey control for assigned mapping, charting, and geodetic missions.

Instruction: Lectures and practical exercises in direction measurements using theodolites, distance measurements through using tape, microwave, and infrared; differential leveling; grid systems, their computations, conversion and transfer; traverse; triangulation; planetable surveys for Army and Marine Corps personnel; and for Air Force personnel only, astronomic surveys including field astronomy, conversion of time, azimuth observations, and astronomic positioning, and geodetic surveying. After 1987, see DD-1601-0023.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics, 3 in topographic or architectural surveying (5/81); in the upper-division baccalaureate category, 3 semester hours in geodetic surveying (5/81).

Related Occupation Codes: 82D.

DD-1601-0011

BASIC CARTOGRAPHY

Course Number: 411-200.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 11–17 weeks (354–498 hours).

Exhibit Dates: 6/79–12/85.

Objectives: To provide required knowledge to perform basic cartographic and photogrammetric tasks with general supervision.

Instruction: Lectures and laboratory exercises including aerial photo interpretation, planimetric compilation, map revision, photomap construction, and negative engraving. For the course after 1985, see DD-1601-0025.

Credit Recommendation: In the vocational certificate category, 4 semester hours in cartographic laboratory techniques including drafting and scribing (5/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to maps and map interpretation or 2 semester hours in architectural or civil engineering drafting (5/81); in the upper-division baccalaureate category, 3 semester hours in laboratory techniques in cartography (5/81).

Related Occupation Codes: 81C.

DD-1601-0012

BASIC TOPOGRAPHIC OFFICERS

Course Number: 4M-703.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 8 weeks (296 hours).

Exhibit Dates: 9/77–12/80.

Objectives: To introduce commissioned officers to the process of map production including data collection, compilation, data analysis, drafting and reproduction.

Instruction: Subjects include survey operations; field data collection and classification; remote sensing; map base revision; terrain evaluation including natural and man-made features; field exercises; color separation including negative engraving, type placement, quality control and management, and mosaics; graphic arts operations including process camera operation, layout procedures, scribe and peel sheet preparation, platemaking operations, and lithographic press operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to graphic arts, 3 in elements of physical and human geography, 3 in maps and map interpretation (5/81); in the upper-division baccalaureate category, 3 semester hours in geographic field techniques (5/81).

Related Occupation Codes: 21D.

DD-1601-0013

BASIC PHOTOGRAPHIC PROCESSES

Course Number: 740-83E10; 740-306.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 14 weeks (432–460 hours).

Exhibit Dates: 11/76–2/86.

Objectives: To teach enlisted personnel technical skills and knowledge related to basic photolithographic processes and graphic arts reproduction.

Instruction: Includes teaching the student to prepare single and multicolor camera ready copy utilizing cold type equipment and metric measurement; course is devoted primarily to camera operations and stripping and platemaking operation. For the course after 1986, see DD-1601-0019.

Credit Recommendation: In the vocational certificate category, 10 semester hours in graphic arts, printing, or photlithographic processes (5/81); in the lower-division baccalaureate/associate degree category, 2 semester hours in photomechanical processes, 4 in offset reproduction (5/81).

Related Occupation Codes: 83E.

DD-1601-0014

ADVANCED GEODETIC SURVEY

Course Number: 4M-F1/412-F2; 710 (4M-710)(USMC); 4M-710.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 14 weeks (448 hours).

Exhibit Dates: 4/82–Present.

Objectives: To provide individuals with geodetic survey techniques and procedures to plan, conduct, control and complete survey projects.

Instruction: Lectures and practical exercises in geodetic survey techniques including horizontal and vertical surveys, geodetic satellite surveys, photogrammetric and map edit surveys; project planning; project execution; briefing; and report writing.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics, 3 in technical communications, 3 in engineering surveying, 3 in management and supervision (5/81); in the upper-division baccalaureate category, 3 semester hours in geodetic surveying (5/81); in the graduate degree category, 3 semester hours in management engineering (5/81).

Related Occupation Codes: 821A; 82D.

DD-1601-0015

ANALYTICAL PHOTOGRAMMETRIC POSITIONING SYSTEM

Course Number: 411-207.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 5/80–1/86.

Objectives: To develop an understanding of photogrammetric and mapping concepts, provide limited theory, and a working skill using the Analytical Photogrammetric Positioning System (APPS) point positioning.

Instruction: Students learn the components, general operating procedures, and at least three applications of the Analytical Photogrammetric Positioning System APPS) including assembly and disassembly and performance of diagnostic procedures on the system especially as it is used as a photo interpretation measuring device. See DD-1601-0026 for later version.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in cartography, photogrammetry, civil engineering, surveying, or geodetic science (5/81); in the graduate degree category, 3 semester hours in cartography, photogrammetry, civil engineering, surveying, or geodetic science. Credit is to be granted in either the upper division or the graduate category as appropriate (5/81).

Related Occupation Codes: 81C.

DD-1601-0016

CARTOGRAPHIC SUPERVISOR

Course Number: 411-241.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 2 weeks (69 hours).

Exhibit Dates: 10/80–9/83.

Objectives: To provide the student with basic transferrable skills in supervision and management.

Instruction: Topics include project planning, implementation, scheduling, quality control, inventory management, and field application.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in management and supervision or in production management (5/81).

DD-1601-0017

MAPPING, CHARTING, AND GEODESY SENIOR OFFICER

Course Number: 4M-702.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 2 weeks (63 hours).

Exhibit Dates: 1/81–1/87.

Objectives: To provide senior level officers of all services and higher rated civilians with a training program in mapping, charting, and geodesy particularly as this training relates to command, staffing and management of sophisticated mapping, charting, and geodesy programs. Emphasis is on personalities, products, and new developments within the system.

Instruction: This course provides an introduction to mapping, charting, and geodesy with the development of an understanding of concepts in remote sensing, satellite geodesy, Analytical Photogrammetric Positioning System (APPS), and digital processing. Planning, programming, and budgeting are considered and the roles of the various services are introduced. Research and development, and command and management of mapping, charting, and geodesy are carefully documented by the introduction of specially selected guest speakers who have experienced the problems in an operational mode.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in cartography, civil engineering, civil engineering technology, geodetic science, surveying or surveying technology or photogrammetry (5/81); in the graduate degree category, 3 semester hours in cartography, civil engineering, geodetic science, surveying, or photogrammetry. Credit is to be granted in either the upper division or graduate category (5/81).

Related Occupation Codes: 21D.

DD-1601-0018

TERRAIN ANALYSIS

Course Number: 491-401.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 12 weeks (395 hours).

Exhibit Dates: 10/80-12/82.

Objectives: To train individuals in terrain analysis through the observation, measurement, and interpretation of the earth science as applied to land use.

Instruction: Lectures, practical exercises and field experience in terrain analysis, map reading, aerial photo interpretation, and analysis of remotely sensed imagery; rural, urban, industrial and transportation land use; weather and climate vegetation and hydrology, and physiology.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in maps and map interpretation, 4 in physical geography (5/81); in the upper-division baccalaureate category, 3 in physical geography field techniques (5/81).

Related Occupation Codes: 81C.

DD-1601-0019

BASIC PHOTOLITHOGRAPHIC PROCESSES

Course Number: 740-306; 740-83E10; ESABD70330-000; A024621.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 15 weeks (497-516 hours).

Exhibit Dates: 3/86-Present.

Learning Outcomes: Upon completion of this course the student will be able to perform all process camera and darkroom operations to produce a line copy negative, halftone negative, line negative, utilizing filters, continuous-tone negative, contact paper prints from continuous tone aerial photo negatives; produce an offset plate, a bookwork dummy, and flats, a multi-image combination form dummy and flat, and a multi-color proof.

Instruction: Includes some lecture/demonstration, but is predominately hand-on activities in process camera operations, making contact paper prints and contact negatives, lithographic offset plates, bookwork flats, simple flats, multi-image combination forms flats, and a multi-color proof. For an earlier version of the course, see DD-1601-0013.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in process camera operations, 5 in stripping and platemaking operations (4/90).

Related Occupation Codes: 82E.

DD-1601-0020

BASIC TERRAIN ANALYSIS

Course Number: 419-400; AO214J1; 491-400(419-81Q10).

Location: Defense Mapping Schoo!, Ft. Belvior, VA.

Length: 11-12 weeks (379 hours).

Exhibit Dates: 2/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to collect, observe, map, analyze, and synthesize basic physical and cultural geographic features.

Instruction: This course includes lecture, laboratory, and field experience in terrain analysis; basic map and air photo interpretation; review of basic mathematics through trigonometric function; production of terrain analysis data base overlays; preparation of terrain synthesis; and will be able to apply findings to real problems.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic map and air photo interpretation; 5 in physical geography (7/87); in the upper-division baccalaureate category, 3 semester hours in physical geography field techniques, 3 in land use analysis, and 3 in physical geography (7/87).

DD-1601-0021

MAPPING, CHARTING, AND GEODESY OFFICER

Course Number: 4M-701; 4M-21C; AO21451.

Location: Defense Mapping School, Ft.Belvoir, VA.

Length: 11 weeks (344 hours).

Exhibit Dates: *Version 1:* 5/89-Present. *Version 2:* 2/86-4/89.

Learning Outcomes: Upon completion of the course the student will be able to understand the theory and principles necessary to comprehend, apply, and utilize the fundamentals of mapping, charting, and geodesy.

Instruction: Instruction includes lecture, laboratory, and practical experiences in geodesy and error theory, photogrammetry and remote sensing, basic surveying, terrain analysis, cartography, reproduction, topographic operation, and digital data processing. For the course prior to 1986, see DD-1601-0007.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in maps and map interpretation (7/87); in the upper-division baccalaureate category, 6 semester hours in cartography, remote sensing, civil engineering, photogrammetry, or a combination of these disciplines (7/87).

Related Occupation Codes: 21C.

DD-1601-0022

ADVANCED GEODETIC SURVEY

Course Number: 4M-710.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 14 weeks (467 hours).

Exhibit Dates: 1/82-Present.

Learning Outcomes: Upon completion of the course, the student will be able to understand geodetic survey techniques and procedures well enough to plan, conduct, control, and complete survey projects.

Instruction: Instruction includes lectures, demonstration, and field exercises in the areas of horizontal and vertical control surveys, three-dimensional survey systems, surveys for mapping, and project planning and execution. For an earlier version of the course, see DD-1601-0003.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in management and supervision, 3 in technical report writing (7/87); in the upper-division baccalaureate category, 3 semester hours in geodetic surveying and/or geodetic control (7/87).

Related Occupation Codes: 821A; 82D.

DD-1601-0023

BASIC GEODETIC SURVEY

Course Number: 412-101; 412-82D10; G5ABD22230-000; A0214A1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 14-18 weeks (469-614 hours).

Exhibit Dates: 10/87-Present.

Objectives: Upon completion of the course the student will be able to establish ground survey control positions for mapping, charting and geodetic surveys.

Instruction: Instruction includes lecture, demonstration, and field exercises in the operation of precise levels, electronic distance measuring devices, theodolites, satellite receivers, and analytical photogrammetric positioning systems. Basic computations are taught as well as map reading and interpretation, and recovery and installation of control points. For an earlier version of the course, see exhibit DD-1601-0010.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in basic map reading and interpretation (7/87); in the upper-division baccalaureate category, 3 semester hours in basic geodetic surveying (7/87).

Related Occupation Codes: 82D.

DD-1601-0024

CONSTRUCTION SURVEY

Course Number: 412-110; 412-82B10; AO24F1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 15-17 weeks (533 hours).

Exhibit Dates: 10/87-6/88.

Learning Outcomes: Upon completion of the course, the student will be able to perform conventional surveying operations with special emphasis in the areas of construction surveying and layout.

Instruction: Instruction includes lectures, demonstration, and field exercises in the areas of plane surveying fundamentals including: vertical control, horizontal control, topographic surveys, electronic distance measuring, preliminary and final surveys, building layout, underground utility layout, note keeping and reduction, traverse computations, and basic blueprint and plan reading. For the course prior to 1987, see DD-1601-0008.

Credit Recommendation: In the vocational certificate category, 3 semester hours in basic map reading and interpretation (7/87); in the lower-division baccalaureate/associate degree category, 8 semester hours in basic/construction surveying, 2 in blueprint/plan reading and interpretation (8/87).

Related Occupation Codes: 82B.

DD-1601-0025

BASIC CARTOGRAPHY

Course Number: 411-200; 411-81C10; A0214R1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 10-11 weeks (363 hours).

Exhibit Dates: *Version 1:* 5/89-Present. *Version 2:* 1/86-4/89.

Learning Outcomes: Upon completion of the course the student will be able to perform basic cartographic tasks which include 1) map interpretation and drafting of map overlays, 2) map base preparation which requires construction of map grids, map projections and plotting of geodetic control, 3) constructing of photo mosaics, with some basic equipment maintenance, 4) map compilation, which includes revision of hypsography (elevations) and planimetric detail including map lettering or type and recasting of map sources by montaging film positives, and 5) color separation, which requires preparation of type (lettering) flats, scribing hydrography, scribing culture, scribing hypsography and the production of an open window flat, including peel coats as needed.

Instruction: This course is taught as a combination of lectures and closely monitored, hands-on, laboratory exercises which deliver both the manual physical skills needed to compile and draft a map and the basic understanding of how primary data such as air photographs are reduced to cartographic detail for map preparation. There is an extensive use of air photos throughout the course, including the preparation of a photomosaic. For an earlier version of the course, see DD-1601-0011.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the vocational certificate category, 6 semester hours in map compilation and drafting, including scribing, air photo mosaicing and montaging of film positives and preparation of color separation plates (geography, cartography, civil engineering (drafting) (7/87); in the lower-division baccalaureate/associate degree category, 4 semester hours in maps and map interpretation OR 3 hours in basic air photograph compilation and interpretation (geography, cartography, geology, and architectural, especially planning or civil engineering, drafting (7/87); in the upper-division baccalaureate category, 3 semester hours in introduction to cartography or basic cartography (geography, cartography, geology, architectural, especially planning or civil engineering drafting (7/87). Credit may be granted in both the lower and the upper division.

Related Occupation Codes: 81C.

DD-1601-0026

ANALYTICAL PHOTOGRAMMETRIC POSITIONING SYSTEM I

Course Number: 411-207; 411-APPS; A0247B1; G5AZD22150-000.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 2 weeks (58-68 hours).

Exhibit Dates: 2/86-Present.

Learning Outcomes: Upon completion of the course the student will be able to understand and operate the Analytical Photogrammetric Positioning System I (APPS) for point positioning and will be able to determine U.T.M. and geographic coordinate positions.

Instruction: Instruction includes lecture, demonstration, and practical exercises in general operating procedures, assembly and disassembly and performance of diagnostic procedures of the APPS. Photointerpretation is also covered. For an earlier version of the course, see DD-1601-0015.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photogrammetry, geodetic science, surveying, civil engineering, or cartography (4/90) OR in the graduate degree category, 3 semester hours in photogrammetry, geodetic science, surveying, civil engineering, or cartography. Credit is to be granted in either the upper-division or the graduate category, as appropriate, but not both (4/90).

Related Occupation Codes: 21C; 811A; 821A; 841A; 81C; 81Q; 82D.

DD-1601-0027

ANALYTICAL PHOTOGRAMMETRIC POSITIONING SYSTEM IV

Course Number: 411-209.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 10/85-1/90.

Objectives: Upon completion of the course the student will be able to understand and operate the Analytical Photogrammetric Positioning System IV (AAPS) for point positioning.

Instruction: Instruction includes lecture, demonstration, and practical exercises in instrument set-up, mono and stereo measurements, reconnaissance camera systems, and basic photogrammetric and geodetic reference systems.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in photogrammetry, geodetic science, surveying, civil engineering, or cartography (7/87).

DD-1601-0028

ADVANCED TERRAIN ANALYSIS

Course Number: 491-402; 491-81Q30.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 15 weeks (525 hours). *Version 2:* 18 weeks (630 hours).

Exhibit Dates: *Version 1:* 1/89-Present. *Version 2:* 10/87-12/88.

Learning Outcomes: Upon completion of the course the student will be able to analyze and produce physical and human geographic information through observation, remote sensing, and field techniques.

Instruction: The course is presented through lectures, laboratory, and field exercises in terrain analysis, remote sensing system; production of terrain analysis date base overlays; application of computer based digital terrain analysis; project planning, coordination; and quality control, determination of flood hazard.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in basic map and air photo interpretation, 5 in physical geography, 3 in introduction tp management principles (7/87); in the upper-division baccalaureate category, 3 semester hours in land use analysis, 3 in remote sensing, 3 in hydrology, and 3 in physical geography field techniques (7/87).

Related Occupation Codes: 81Q.

DD-1601-0029

TERRAIN ANALYSIS WARRANT OFFICER CERTIFICATION

Course Number: 4M-841A.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 9-10 weeks (392 hours).

Exhibit Dates: 1/88-Present.

Learning Outcomes: Upon completion of the course the student will understand the theory and principles necessary to coordinate, plan, manage, direct, and advise acquisition, reproduction, and amd distribution of terrain analysis information and its synthesis.

Instruction: The course includes lecture, laboratory, and practical exeperience in geodesy, multispectral imagery, computer use, review of terrain analysis, cartography, reproduction, operation, and digital imagery.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in map and map interpretation (7/87); in the upper-division baccalaureate category, 3 semester hours in geographic laboratory techniques including cartography, 3 in field experience in operation management (7/87).

Related Occupation Codes: 841A.

DD-1606-0001

NATIONAL SENIOR INTELLIGENCE

Course Number: None.

Location: Defense Intelligence School, Washington, DC.

Length: 14 weeks (560 hours).

Exhibit Dates: 6/72-7/81.

Objectives: To provide officers and civilian personnel with the knowledge necessary to hold management positions in the field of national and international intelligence.

Instruction: Lectures in the processing and management of intelligence information, development and implementation of U.S. foreign policy, the national intelligence structure, and government agencies involved in foreign policy. The Defense Intelligence School is now accredited by the Commission on Higher Education of the Middle States Association of Colleges and Schools.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in international relations, public administration, or political science (1/74).

DD-1706-0001

MULTILITH 1250 REPAIR

Course Number: 690-621.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 2 weeks (80 hours).

Exhibit Dates: 11/73-1/75.

Objectives: To train multilith operators to troubleshoot, and perform preventive maintenance on, 1250 multiliths.

Instruction: Lectures and practical exercises on the preventive maintenance and repair of the 1250 multilith, including mechanical adjustments necessary to maintain the operational capability of the 1250 multilith, normal operator adjustments, system alignments and adjustments, maintenance, case problems, and preventive maintenance.

Credit Recommendation: In the vocational certificate category, 3 semester hours in multilith 1250 repair (6/74).

DD-1706-0002

REPRODUCTION EQUIPMENT REPAIR

Course Number: 690-41K20; 690-620.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 15 weeks (478-512 hours).

Exhibit Dates: *Version 1:* 2/79-1/86. *Version 2:* 6/72-1/79.

Objectives: To train enlisted personnel to operate and repair, and calibrate mechanical/electrical reproduction equipment, copy cameras, power paper cutters, paper folder-stitchers, and offset duplicating machines.

Instruction: *Version 1:* Lectures and practical exercises in the operation and maintenance of mechanical/electrical equipment. Course includes: introduction to photolithography techniques; repair, adjustment and calibration of graphic arts reproduction equipment to include photomachanical, electrical power sources, switches and relays, mechanical timing and pneumatic devices, paper shears, binders, drills, and folders. For the course after 1986, see DD-1706-0003. *Version 2:* Lectures and practical exercises in the operation and maintenance of reproduction equipment. Course includes the 24 X 30 copy camera, introduction to photolithography, repair parts supply, operational adjustments, aligning adjustments, repair procedures, maintenance of layout and platemaking equipment, repair of electrical components, repair and maintenance of power paper cutter, repair, maintenance, and timing of the offset duplicating machine, and the maintenance and repair of the bindery equipment and the paper folder and stitcher.

Credit Recommendation: *Version 1:* In the vocational certificate category, 5 semester hours in mechanical/electrical graphic arts or business machine operation, calibration, and equipment (5/81); in the lower-division baccalaureate/associate degree category, 4 semester hours in mechanical/electrical equipment calibration and repair (5/81). *Version 2:* In the vocational certificate category, 5 semester hours in business machine repair (5/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in business machine repair (5/74).

Related Occupation Codes: 41K.

DD-1706-0003

Reproduction Equipment Repair

Course Number: 690-620; 690-ASIJ6; AO215F1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 14–15 weeks (489 hours).

Exhibit Dates: 2/86–Present.

Learning Outcomes: Upon completion of this course, the student will be able to safely use and care for applicable hand and measuring tools for repair of reproduction equipment; adjust, repair, and replace parts on the offset duplicator, trammel and calibrate the copy camera to within prescribed specifications; troubleshoot and repair medium-sized offset press to include troubleshooting and adjusting timing of paper train, cylinder assembly, dampening system, inking system, timing of main press, and verification of timing through troubleshooting with register.

Instruction: The course includes demonstration/lectures, but is conducted as predominantly hands-on instruction in offset duplicator repair, copy camera repair, and maintenance and repair of medium-sized offset presses. For an earlier version of this course, see exhibit DD-1706-0002.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in offset duplicator repair, 3 in process camera repair, and 5 in medium-sized offset press repair (7/87).

Related Occupation Codes: 83F.

DD-1709-0001

Intermediate Photojournalism

Course Number: 570-ASIJ8.

Location: Defense Information School, Ft. Benjamin Harrison, IN.

Length: Self-paced 7 weeks (276–280 hours).

Exhibit Dates: *Version 1:* 10/78–8/87. *Version 2:* 10/77–9/78.

Objectives: To provide photojournalism training for journalists and photographers.

Instruction: Students are given instruction in basic camera techniques, basic and advanced black and white darkroom procedures, Ektachrome slide processing, photo layout and design, and multi-media slide presentations. A course option includes news, feature, and cutline writing. Part of course is self-paced.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in photography, 2 in news and feature writing (print), and 2 in audio visual presentation techniques (10/86). *Version 2:* In the upper-division baccalaureate category, 3 semester hours in photojournalism (2/78).

DD-1709-0002

Intermediate Photojournalism

Course Number: 570-AS/J8.

Location: Defense Information School, Ft. Benjamin Harrison, IN.

Length: 7 weeks (276 hours).

Exhibit Dates: 9/87–Present.

Learning Outcomes: Upon completion of the course, the student will be able to practice basic camera techniques, basic and advanced black and white darkroom procedures, E-6 slide processing, photo editing and layout and basic audio-visual slide show production. Students prepare simple feature packages that include photos, text, captions and headlines.

Instruction: This is a two-track program that provides basic photography, writing and editing training for military photojournalists. During the first three weeks, students with writing and reporting experience study the fundamentals of photography while those with photography experience concentrate on writing and copy editing skills. The final four weeks involve both groups in the production of word and picture packages that include newspaper and magazine format layouts and an audio-visual presentation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours of photojournalism (5/90).

DD-1713-0001

Map Compilation

Course Number: 413-81B20; 411-202.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 9 weeks (325 hours).

Exhibit Dates: 10/70–11/74.

Objectives: To train enlisted personnel in the compilation and revision of planimetric maps, topographic maps, and photomaps, using drafting instruments and plotting devices.

Instruction: Lectures and practical exercises in the compilation and revision of planimetric, topographic, and photomaps, including compilation base and radial triangulation, map compilation and revision, aerial photography planning and mosaics, extraction of cartographic detail from aerial photographs, color separation, situation overlays and special studies, maintenance of cartographic equipment and facilities, and editing of color separation scribe sheets.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 7 semester hours in map compilation (5/74); in the upper-division baccalaureate category, 4 semester hours in map compilation (5/74).

DD-1713-0002

Cartographic Drafting

Course Number: 411-201.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 9 weeks (293 hours).

Exhibit Dates: 5/72–9/74.

Objectives: To train enlisted personnel to perform as cartographic draftsmen.

Instruction: Lectures and practical exercises in cartographic drafting. Topics include compilation base and radial triangulation, basic compilation and map revision, aerial photomosaics, color separation, and situation overlays and special studies.

Credit Recommendation: In the vocational certificate category, 6 semester hours in cartographic drafting (5/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in cartographic drafting (5/74); in the upper-division baccalaureate category, 2 semester hours in cartographic drafting (5/74).

DD-1713-0004

Construction Drafting

Course Number: 413-81B20; 413-210.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 11 weeks (360–405 hours).

Exhibit Dates: *Version 1:* 5/79–2/85. *Version 2:* 3/71–4/79.

Objectives: To train enlisted personnel to perform as construction or architectural draftsmen.

Instruction: *All Versions:* Lectures and practical exercises in the preparation of working drawings, charts, and graphs for the construction of roads, airfields, bridges, buildings, ports, harbors, and other military construction, including construction drafting; preparation of mechanical, construction, utilities, structural, and technical drawings; engineer drawings; mechanical lettering; and charts and graphs. After 1985, see DD-1713-0005. *Version 1:* Includes presentation drawings.

Credit Recommendation: *Version 1:* In the vocational certificate category, 10 semester hours in design and drafting (5/81); in the lower-division baccalaureate/associate degree category, 8 semester hours in architectural drafting or 6 in engineering graphics (5/81). *Version 2:* In the vocational certificate category, 10 semester hours in architectural drafting (7/74); in the lower-division baccalaureate/associate degree category, 8 semester hours in architectural drafting (7/74); in the upper-division baccalaureate category, 6 semester hours in architectural drafting (7/74).

Related Occupation Codes: 81B.

DD-1713-0005

Construction Drafting

Course Number: 413-210; 413-81B10; AO214D1.

Location: Defense Mapping School, Ft.Belvoir, VA.

Length: 11–12 weeks (386 hours).

Exhibit Dates: 3/85–11/88.

Learning Outcomes: Upon completion of the course the student will be able to perform basic drafting functions in the areas of engineering graphics, architectural drafting, structural drafting; highway planning and profile drafting, and technical chart and graph publication.

Instruction: Instruction includes lecture and practical exercises in the areas of: care and handling of drafting equipment; freehand lettering; floor plans, elevations, and details; timber, concrete, and steel structures; highway plan, profile, and cross-sections; utility layouts; inking and mechanical lettering; and chart/graph construction. For the course prior to 1985, see DD-1713-0004.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 4 semester hours in architectural drafting, 2 in structural drafting, 3 in engineering graphics (basic drafting), and 2 in highway drafting (7/87).

Related Occupation Codes: 81B.

DD-1713-0006

Cartographic/Geodetic Officer

Course Number: 4M-701AF; G50BD5731-000.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 7 weeks (250 hours). *Version 2:* 10–11 weeks (351 hours).

Exhibit Dates: *Version 1:* 6/90–Present. *Version 2:* 2/87–5/90.

Learning Outcomes: The purpose of this course is to teach a general overview of cartography, geodesy, surveying, terrain analysis, computer graphics, digital processing, plus operations, products, and management policies of the Defense Mapping Agency. Upon completion the student will be trained in the overall cartographic geodetic process, and will have the technical skills to manage a production facility or oversee the production of products, data, or reports from field operations.

Instruction: The course presents an explanation of the map-making process. Students learn applications of computer technology to mapping and charting. There is a concern with the management of mapping, charting, and geodesy process. The course offers a strong hands-on component of surveying techniques, remote sensing and terrain analysis.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 6 semester hours in blocks of 3 hours each in: map reading and interpretation, cartography, remote sensing, surveying, geodesy, or management. In addition, 3 hours in introduction to physical geography (7/87); in the upper-division baccalaureate category, 3 semester hours in geodesy, cartography, management (7/87). Credits may be awarded in the lower or the upper-division in any combination not to exceed 6 semester hours.

DD-1713-0007

Advanced Cartography

Course Number: 411-208; 411-81C30.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 8–9 weeks (272–283 hours).

Exhibit Dates: 2/86–Present.

Learning Outcomes: Tasks include: review of new cartographic equipment and developments, mathematics needed in the course, review of basic geodesy military projections, grids, and mapping controls and construction of a base map. Development of the basic skills and knowledge required to setup and operate an analytical photogrammetic positioning system including troubleshooting and assembly of the system. The student will be provided with the advanced technical skills and knowledge required to supervise planimetric map revision, including color separations and image based projects. There is a strong element directed towards the development of the management skills necessary for the collection and evaluation of sound material, quality control, and determination of technical supply requirements for cartographic projects.

Instruction: This course is taught as a combination of lectures and closely monitored hands-on laboratory exercises which develop an understanding of advanced skills in cartography and photogrammetry, but includes cartographic photomapping, applications, production management methods and equipment assembly, troubleshooting, and supervision techniques.

Credit Recommendation: In the vocational certificate category, 6 semester hours in photogrammetry, cartography, civil engineering, or 3 hours in management in combination with 3 hours in any one of the above listed subjects (7/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in basic photogrammetry, map reading and interpretation, air photo interpretation, architectural planning or management, and 3 in geodesy (7/87); in the upper-division baccalaureate category, 3 semester hours in photogrammtery or advanced cartography. Credit is to granted in the upper division only if not granted in the lower division (7/87).

Related Occupation Codes: 81C.

DD-1715-0001

MOD 40 Board Level Maintenance
(Teletype Model 40/400 Board Level Maintenance)

Course Number: EM-144.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/76–Present.

Objectives: This course is designed to prepare electronic maintenance technicians to perform installation and corrective maintenance on the model 4/400 teletype terminal.

Instruction: This course includes troubleshooting exercises as well as classroom lecture. Technicians learn to perform installation and corrective maintenance on the model 4/400 teletype terminal.

Credit Recommendation: In the vocational certificate category, 2 semester hours in teletype model 40 maintenance (3/82).

DD-1715-0002

TD 1220/G MUX/DEMUX Maintenance
(Maintenance of the TD 1220/G Multiplexer-Demultiplexer)
(Operation, Maintenance,and Repair of the TD 1220/G and TD 1246/G Multiplexer-Demultiplexer)

Course Number: EM-212.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/80–Present.

Objectives: To train students in the operation, maintenance, and repair of the TD-1220/G multiplexer-demultiplexer. About half of the course time is devoted to system troubleshooting.

Instruction: Course includes a detailed equipment analysis including operation of each card making up the unit. The course then continues with installation, maintenance and troubleshooting.

Credit Recommendation: In the vocational certificate category, 2 semester hours in digital mux/demux repair (3/82).

DD-1715-0003

CV-3511 Isochronous Channel Converter
(CV-3511(P)/G Isochronous Channel Coverter Maintenance and Repair)

Course Number: EM-213.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/78–Present.

Objectives: This course provides the graduate with the information necessary to maintain and troubleshoot the CV-3511(P)/G Isochronous Channel Converter.

Instruction: Lectures and practical exercise topics include operation theory, installation, maintenance, and troubleshooting the CV-3511(P)/G ICC.

Credit Recommendation: In the vocational certificate category, 1 semester hour in electronic maintenance and troubleshooting (3/82).

DD-1715-0004

KG-34 Cryptographic Equipment Maintenance
TSEC/KG-34 Component Level Maintenance

Course Number: EM-327.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 4 weeks (160 hours).

Exhibit Dates: 8/71–Present.

Objectives: To be able to perform maintenance on the TSEC/KG-34 equipment, including transmitters and receivers, to the component level.

Instruction: Description, function, operation and employment of the TSEC/KG-30/33/34 equipment, including fault isolation procedures and practices are covered.

Credit Recommendation: In the vocational certificate category, 2 semester hours in electronic maintenance and troubleshooting (3/82).

DD-1715-0005

Honeywell H316R Computer Maintenance

Course Number: ES-319.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 7 weeks (280 hours).

Exhibit Dates: 11/76–Present.

Objectives: This course prepares personnel to maintain the H316R Honeywell computer.

Instruction: Lectures and practical exercises include machine language programming, I/O and interrupts, logic, instruction flow, and timing and control.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in introduction to minicomputers (assembly and machine language programming, machine architecture and I/O structure) (3/82).

DD-1715-0006

IATS System Maintenance

Course Number: ES-323.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 6 weeks (240 hours).

Exhibit Dates: 2/72–Present.

Objectives: This course prepares personnel to maintain the IATS system (Honeywell H316 digital computer based).

Instruction: Practical exercise and lecture topics include multiplex controller, digital amplifier, line termination unit, tape control unit, and the magnetic tape unit. Students will have completed Honeywell H316R Computer Maintenance (ES-319) (DD-1715-0005).

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer peripheral troubleshooting and maintenance (3/82).

DD-1715-0007

LP11/LP02 Line Printer Maintenance

Course Number: ES-402.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 1 weeks (56 hours).

Exhibit Dates: 10/75–Present.

Objectives: This course enables the graduate to maintain the M7930 controller and the data products 2410 line printer (LP11-KA system).

Instruction: Lecture and practical exercise topics include module description, block diagrams, troubleshooting, and alignment. Student will have completed PDP-11/45 or PDP-11/40 Processor Maintenance (ES-445 or ES-440) (DD-1715-0013 or DD-1715-0012).

Credit Recommendation: In the vocational certificate category, 1 semester hour in LP11 line printer maintenance (3/82).

DD-1715-0008

RP11/RP03 Disk Pack Maintenance

Course Number: ES-403.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 9/79–Present.

Objectives: This course enables the graduate to maintain the RP11/RP03 disk system.

Instruction: Extensive practical exercises include troubleshooting and alignment techniques. Lectures discuss signal flow and logic analysis. Students will have completed a PDP-11 Processor Maintenance course such as ES-440 or ES-445 (DD-1715-0012 or DD-1715-0013).

Credit Recommendation: In the vocational certificate category, 2 semester hours in disk pack system maintenance (3/82).

DD-1715-0009

PC11/PC05 Paper Tape Unit Maintenance

Course Number: ES-404.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 1 week (56 hours).

Exhibit Dates: 6/78–Present.

Objectives: To enable graduates to maintain the PC11/PC05 Paper Tape Unit.

Instruction: Instructions in I/O programming, understanding of basic operation of paper tape unit, write program to operate paper tape unit. Student will have completed a PDP-11 Processor Maintenance course such as ES-440, ES-445 or ES-411 (DD-1715-0012, DD-1715-0013 or DD-1715-0011).

Credit Recommendation: In the vocational certificate category, 1 semester hour in PC11/PC05 paper tape unit maintenance (3/82).

DD-1715-0010

LP11/LP05 Line Printer Maintenance

Course Number: ES-408.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 1 week (56 hours).

Exhibit Dates: 6/79–Present.

Objectives: This course enables the graduate to maintain the LP11-VA line printer system to the component level.

Instruction: Extensive troubleshooting laboratory exercises are combined with classroom lecture. Topics include operation, fault logic, and alignment. Student will have completed a PDP-11 Processor Maintenance course such as ES-440 or ES-445 (DD-1715-0012 or DD-1715-0013).

Credit Recommendation: In the vocational certificate category, 1 semester hour in LP11 line printer maintenance (3/82).

DD-1715-0011

PDP-11 Instruction Set

Course Number: ES-411.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 4/75–Present.

Objectives: To teach machine and assembly language programming on the DEC PDP-11.

Instruction: Lecture and hands-on experience in machine and assembly language programming on the DEC PDP-11, including full word addressing, stack operations, system architecture (including UNIBUS). Many practical examples are covered in the programming exercises.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in machine and assembly language programming on the PDP-11 (DEC) (3/82).

DD-1715-0012

PDP-11/40 Processor Maintenance

Course Number: ES-440.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 3 weeks (120 hours).

Exhibit Dates: 4/76–Present.

Objectives: This course enables the graduate to maintain the PDP-11/40 central processor unit.

Instruction: This intimate look at the PDP-11/40 CPU is supported by both lecture and meaningful practical exercises. Student will have completed PDP-11 Instruction Set (ES-411) listed as DD-1715-0011.

Credit Recommendation: In the vocational certificate category, 3 semester hours in PDP-11 CPU maintenance (3/82).

DD-1715-0013

PDP-11/45 Processor Maintenance

Course Number: ES-445.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 4 weeks (160 hours).

Exhibit Dates: 5/75–Present.

Objectives: This course teaches the student to operate and maintain the DEC PDP-11/45 central processing unit.

Instruction: This intimate look at the PDP-11/45 CPU is supported by both lecture and meaningful practical exercises. Student will have completed PDP-11 Instruction Set, ES-411 (DD-1715-0011).

Credit Recommendation: In the vocational certificate category, 3 semester hours in PDP-11 CPU maintenance (3/82).

DD-1715-0014

KT11-C Memory Management

Course Number: ES-446.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 1 week (56 hours).

Exhibit Dates: 6/75–Present.

Objectives: The graduate will be able to maintain the KT11-C memory management unit option to the PDP-11/45 CPU.

Instruction: Lectures and supported with meaningful practical exercises to teach the student to maintain the KT11-C memory management unit option to the PDP-11/45 CPU.

Credit Recommendation: In the vocational certificate category, 1 semester hour in PDP-11 memory management unit maintenance (3/82).

DD-1715-0015

RK11-D/RK05 Disk Systems Maintenance

Course Number: ES-412.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 2 weeks (80 hours).

Exhibit Dates: 12/77–Present.

Objectives: This course enables the graduate to maintain the RK11-D/RK05 disk system.

Instruction: This course develops logical troubleshooting techniques including preventive maintenance and alignment techniques. Students are required to complete a PDP-11 processor maintenance course prior to enrollment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in floppy disk system maintenance (3/82).

DD-1715-0016

Intermediate ELINT Collection and Analysis

Course Number: EA-280.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 8 weeks (280 hours).

Exhibit Dates: 8/71–Present.

Objectives: This course is designed to prepare SCA personnel to perform the duties of collector/analyst at ELINT collection sites or analysis centers with minimum supervision.

Instruction: The course combines lecture and hands-on experience. Topics include scientific notation, basic algebra and trigonometry, unit conversions, oscilloscope fundamentals, use of counters and spectrum analyzers, and fundamentals of modulation and signal analysis with emphasis on radar signals.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in technical mathematics (if credit has not given for prerequisite), 1 in instrument familiarization laboratory, 2 in fundamental signal analysis (3/82).

DD-1715-0017

Advanced ELINT Collection/Analysis

Course Number: EA-380.

Location: National Cryptologic School, Ft. Meade, MD.

Length: 8 weeks (320 hours).

Exhibit Dates: 1/72–Present.

Objectives: This course is designed to train the student to evaluate ELINT targets with respect to performance capabilities, usage, and how they can be countered.

Instruction: The topics include an introduction to probability theory, waveform synthesis, antenna concepts, modulation, and communications system theory emphasizing microwave techniques. Course is essentially lecture only.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in basic probability theory, 3 in basic communications and signal analysis, 1 in oral communications (3/82).

DD-1719-0001

LITHOGRAPHIC STRIPPING AND PLATEMAKING

Course Number: 740-83D20; 740-302.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 7 weeks (227 hours).

Exhibit Dates: 4/72–1/88.

Objectives: To train enlisted personnel to prepare and produce offset plates to be used in the lithographic printing process.

Instruction: Lectures and practical exercises in the preparation and production of offset plates to be used in the lithographic printing process, including layout, stripping, and platemaking procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in graphics or printing (5/74).

DD-1719-0002

OFFSET PRINTING

Course Number: 670-41B10; 740-83F20; 740-303.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 9 weeks (305 hours). *Version 2:* 8 weeks (276 hours).

Exhibit Dates: *Version 1:* 5/80–12/85. *Version 2:* 11/73–4/80.

Objectives: To train enlisted personnel to adjust and operate offset presses in the reproduction of maps, charts, and other printed line work.

Instruction: Lectures and practical exercises in offset printing. Topics include photolithography materials, methods of producing military maps, operation of power paper cutter; maintenance of offset press, controls, feeder and delivery assemblies, cylinder assembly, dampening assembly, linking assembly, printing practice, identification of printing problems, printing a three-color and five-color map, and modern methods of lithographic offset press operations. For the course after 1985, see DD-1719-0006.

Credit Recommendation: *Version 1:* In the vocational certificate category, 6 semester hours in offset printing (5/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in offset printing, 2 in introduction to graphic arts (5/81); in the upper-division baccalaureate category, 1 semester hour in photomechanical processes (5/81). *Version 2:* In the vocational certificate category, 4 semester hours in graphic arts (5/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in graphic arts (5/74).

Related Occupation Codes: 41B; 83F.

DD-1719-0003

LITHOGRAPHIC PHOTOGRAPHY

Course Number: 740-83D20; A-740-0020; 740-301.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 8 weeks (276 hours).

Exhibit Dates: 11/73–4/77.

Objectives: To train enlisted personnel to operate copy cameras and related equipment.

Instruction: Lectures and practical exercises in fundamentals of copy photography, camera operation, film processing, exposure, filters, line and continuous-tone copying, halftone magenta screens, contact printing, diapositive glass plates, pictomaps, electronic contact printer, and preventive maintenance.

Credit Recommendation: In the vocational certificate category, 2 semester hours in basic lithography on the basis of institutional evaluation (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in basic lithography on the basis of institutional evaluation (7/74); in the upper-division baccalaureate category, 2 semester hours in basic lithography on the basis of institutional evaluation (7/74).

DD-1719-0004

OFFSET DUPLICATING
(Offset Duplicating Equipment Operator)

Course Number: 740-304.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 7 weeks (232 hours). *Version 2:* 5 weeks (145 hours).

Exhibit Dates: *Version 1:* 3/80–11/81. *Version 2:* 11/72–2/80.

Objectives: To train enlisted personnel in the operation and basic maintenance and calibration of the offset duplicator, camera processor, and platemaker equipment.

Instruction: *Version 1:* Course includes introduction to photolithography and technical knowledge and skills in the operations maintenance, repair and calibration of mechanical duplicating equipment. *Version 2:* Course includes: introduction to photolithography; training in the operation of the 3M MR-412 Camera Processor and the A.B. Dick 675/...Copier with Platemaker Converter; and training in the operation and maintenance of other duplicating equipment, including the A&M 1250 Multilith Duplicator, the A.B. Dick 350 Duplicator, the ATF Davidson 500 Duplicator, and the ATF Davidson Perfector Duplicator.

Credit Recommendation: *Version 1:* In the vocational certificate category, 5 semester hours in business machine operation, maintenance, and repair (5/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in business machine or graphic arts operation and maintenance (5/81). *Version 2:* In the vocational certificate category, 5 semester hours in offset duplicating equipment operation (6/74).

Related Occupation Codes: 81A.

DD-1719-0005

BASIC LITHOGRAPHER

Course Number: 740-309.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 19 weeks (496–620 hours).

Exhibit Dates: 12/80–2/86.

Objectives: To train enlisted personnel to operate a graphic arts (lithography) reproduction unit.

Instruction: Lectures and practical exercises in graphic arts reproduction. Course covers theory and technical skills related to photomechanical/graphic arts reproduction and includes photoprocessing, plate-making, layout and design, offset printing, binding, collating, and print shop management. After 1986, see DD-1719-0007.

Credit Recommendation: In the vocational certificate category, 10 semester hours in offset printing (printer) (5/81); in the lower-division baccalaureate/associate degree category, 2 semester hours in photomechanical reproduction, 4 in offset printing, 1 in layout and design (graphics) (5/81); in the upper-division baccalaureate category, 3 semester hours in graphic arts reproduction, 1 in photographic processes (5/81).

DD-1719-0006

BASIC OFFSET PRINTING

Course Number: 740-303; 740-83F10; A02PAA1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 8–9 weeks (293–297 hours).

Exhibit Dates: 1/86–Present.

Learning Outcomes: Upon completion of the course the student will be able to set-up and operate both sheetfed offset lithographic duplicators and presses. The student should be able to make normal operating adjustments of sheet feed, transport and delivery systems, dampening and inking systems, and produce a lithographic plate and operate common binder equipment.

Instruction: The course covers press operating procedures including pressure adjustments for inking and dampening systems, packing calculations, register adjustments and requirements, platemaking techniques and proper operation of bindery equipment. Distinctions are made between duplicating and press limitations and capabilities. Instruction in general operating maintenance and lubrication is provided in both process and bindery area. For an earlier version of the course, see DD-1719-0002.

Credit Recommendation: In the vocational certificate category, 6 semester hours in offset lithographic printing (7/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in offset printing laboratory (7/87).

Related Occupation Codes: 83F.

DD-1719-0007

NAVY/AIR FORCE BASIC LITHOGRAPHER

Course Number: 740-309; E5ABD70330 000; A-740-0025.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 18 weeks (577–590 hours).

Exhibit Dates: 3/86–Present.

Learning Outcomes: Student, upon completion of the course, will be proficient in offset lithographic press operation and general operating maintenance, reproduction photography, general copy preparation and image assembly, common bindery equipment operation and maintenance, and will have some knowledge of microfilm equipment operation/metalphoto process, and basic knowledge of printshop administration.

Instruction: Course includes lectures, demonstrations, and practical experience in phototypesetting procedures, paste-up, line and half-tone negative generation including use of filetrs, image assembly techniques, platemaking control, operating adjustments and mechanics of lithographic process/duplicators, and bindery systems operations. Navy personnel receive instruction in print shop administration and metal photo plates. Air Force personnel receive microfilm equipment operation and reduced copyprep. For the course before 1986, see DD-1719-0005.

Credit Recommendation: In the vocational certificate category, 8 semester hours in offset lithographic presswork, 1 in finishing operation (4/90); in the lower-division baccalaureate/associate degree category, 5 semester hours in lithographic presswork, 3 in reproduction photography, 1 in layout and design (4/90).

DD-1721-0001

Topographic Instrument Repair
(Optical Survey Instrument Repair)

Course Number: 670-41B20; 670-601.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: *Version 1:* 10 weeks (320 hours). *Version 2:* 12 weeks (382 hours).

Exhibit Dates: *Version 1:* 10/80-3/82. *Version 2:* 2/74-9/80.

Objectives: To train enlisted personnel to maintain and repair and calibrate optical surveying and mapping instruments.

Instruction: Lectures and practical exercises in surveying and mapping instrument maintenance, adjustment, and repair, including abney hand level, dumpy level, telescopic alidade, transit, military level, one-minute and one-second theodolites, and survey tapes. For the course after 1982, see DD-1721-0002.

Credit Recommendation: *Version 1:* In the vocational certificate category, 8 semester hours in instrument optical repair (5/81); in the lower-division baccalaureate/associate degree category, 3 semester hours in mechanical/optical testing and calibration (5/81). *Version 2:* In the vocational certificate category, 8 semester hours in optical survey instrument repair (5/74).

Related Occupation Codes: 81A.

DD-1721-0002

Topographic Instrument Repair

Course Number: 670-601; 670-41B10; AO222T1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 10 weeks (320 hours).

Exhibit Dates: 4/82-3/89.

Learning Outcomes: Upon completion of the course the student will be able to disassemble, inspect, clean, reassemble, and adjust a dumpy level, telescopic alidade, and one minute, two second and one-tenth second theodolites.

Instruction: Instruction includes lectures, demonstration and practical exercises in the adjustment and repair of optical instruments including spirit levels, telescopic alidades, and angle/direction measuring instruments. For the course prior to 1982, see DD-1721-0001.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in mechanical/optical instrument testing, repair, and calibration (7/87).

Related Occupation Codes: 41B.

DD-1722-0001

Hydrographic Survey

Course Number: 412-103; AO2DC1.

Location: Defense Mapping School, Ft. Belvoir, VA.

Length: 7 weeks (232-233 hours).

Exhibit Dates: 1/87-Present.

Learning Outcomes: Upon completion of the course the student will have been introduced to hydrography; the goal is to provide a basic understanding of geodesy including visual survey position, resection, and intersection and electronic surveying position. The course is concerned with beach signals, error theory, currents and current measurement; the student will be taught to scale and interpret echograms, annotate sounding data, construct a grid sheet and smooth sheet. The student will be familiarized with hydrographic equipment and organizations.

Instruction: The overall purpose of the course is to provide basic skills and knowledge necessary in conducting manual hydrographic survey from the planning stages through the implementing of a smooth sheet. There is hands-on experience in hydro-survey equipment and theoretical application of electronic hydro-survey techniques. Students will be expected to obtain knowledge and skills to convert raw hydrographic date into usable format.

Credit Recommendation: In the vocational certificate category, 3 semester hours in surveying, hydrographic surveying (7/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in basic survey, 3 in hydrographic surveying, 3 in basic marine science, 3 in coastal geomorphology, or 3 in basic geodesy for a total of not more than 6 semester hours (7/87); in the upper-division baccalaureate category, 3 semester hours in surveying, hydrographic surveying, geodesy, or marine science. Recommendation is to grant up to 6 semester hours of which 3 may be in the upper divison (7/87).

DD-1728-0001

Industrial Security Specialist

Course Number: 5220-2.

Location: Defense Industrial Security Institute, Richmond, VA.

Length: *Version 1:* 5 weeks (182-183 hours). *Version 2:* 3 weeks (113 hours).

Exhibit Dates: *Version 1:* 7/76-1/90. *Version 2:* 9/72-6/76.

Objectives: To provide industrial security specialists with training in defense industrial security.

Instruction: *All Versions:* Lectures and practical exercises in the history, management, application, and functions of the defense industrial security program, organization for security cognizance, laws and regulations, security hazards, applicable security resources, responsibilities of contracting officers, personnel clearance programs, inspections, security education program, security arrangements, international aspects, and espionage. *Version 1:* This version emphasizes the security threat against the U.S. government and industry; facility protection programs; classified document control; electronic and physical security measures; communications security; vulnerabilities of and protective measures for automatic data-processing systems, emergency/disaster planning and procedures. Audio-visual presentations.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 5 semester hours in criminal justice or security administration and management (1/77). *Version 2:* In the vocational certificate category, 2 semester hours in criminology (5/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in criminology (5/74); in the upper-division baccalaureate category, 2 semester hours in criminology (5/74).

DD-1728-0002

Information Security Management

Course Number: 5220.7.

Location: Defense Industrial Security Institute, Richmond, VA.

Length: 2 weeks (73 hours).

Exhibit Dates: 6/74-1/90.

Objectives: To provide instruction on elements of the Defense Department Information Security Program, with particular emphasis on proper security classification and the safeguarding of classified information. Note: This course consists of two 1-week components, referred to separately as (1) Classification Management and (2) Safeguarding Classified Information. Recommended credit is for combined courses only.

Instruction: The security manager; organization for security; policies, objectives and management implementation; classification principles and problems; declassification and downgrading; markings and control of classified documents; communications security; automatic data-processing security; emergency planning; and processing security violations and compromises.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in criminal justice or security administration and management (1/77).

Course Exhibits

MC

MC-0419-0001

BASIC FREIGHT OPERATION

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 4 weeks (140 hours).

Exhibit Dates: 12/67–Present.

Objectives: To train enlisted personnel in all aspects of freight operation.

Instruction: Lectures and practical experience in the fundamentals of shipping and receiving; the capabilities of the transportation system; rules and regulations governing transportation; freight classification, regulation and storage; use of materials-handling equipment, including the forklift; use of the manual typewriter.

Credit Recommendation: In the vocational certificate category, 3 semester hours in freight handling (1/74).

MC-0419-0002

MOTOR TRANSPORT MAINTENANCE MANAGEMENT

Course Number: None.

Location: Supply Center, Albany, GA.

Length: 12 weeks (363–447 hours).

Exhibit Dates: 9/68–12/74.

Objectives: To train enlisted personnel to supervise, manage, and operate a motor transport maintenance facility.

Instruction: Lectures and practical exercises in management principles; maintenance functions; basic shop sets; fuel and electric shop sets; recovery of vehicles, tankers, chassis, and power plants; and on-the-job repairs.

Credit Recommendation: In the vocational certificate category, 3 semester hours in introduction to automotive shop practices (4/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to automotive shop practices, 6 in transportation management, 6 in truck driver training (4/74); in the upper-division baccalaureate category, 4 semester hours in transportation management (4/74).

MC-0419-0003

MOTOR TRANSPORT OFFICER

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC; Supply School, Cp. Lejeune, NC.

Length: 12–17 weeks (414–590 hours).

Exhibit Dates: 7/58–9/80.

Objectives: To train enlisted personnel to inspect and supervise the servicing, repair, and maintenance of automotive vehicles.

Instruction: Lectures and practical exercises in combustion principles, electrical principles, hydraulic principles, lubrication and transmission of power, and the manufacture, maintenance, and repair of motor vehicles. After 9/80, see MC-0419-0005.

Credit Recommendation: In the vocational certificate category, 9 semester hours in automotive maintenance (7/74).

MC-0419-0004

MOTOR TRANSPORT OFFICER LEADERSHIP
(Motor Transport Officer Orientation)

Course Number: None.

Location: Supply School, Cp. Lejeune, NC.

Length: *Version 1:* 7 weeks (198 hours). *Version 2:* 4–6 weeks (140–189 hours).

Exhibit Dates: *Version 1:* 7/74–3/84. *Version 2:* 10/63–6/74.

Objectives: To train officers to manage motor transport operations.

Instruction: *Version 1:* Includes supervision of vehicle maintenance operations with respect to scheduling cleaning, lubrication, and inspection. Familiarization with compression ignition and spark ignition engines. *Version 2:* Lectures and practical exercises in the operation and management of motor transport facilities. Course includes engine fundamentals, electrical systems, power trains, fuel systems, and maintenance management.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in automotive or heavy equipment maintenance management (4/76). *Version 2:* In the vocational certificate category, 2 semester hours in introduction to automotive or transportation technology (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to automotive or transportation technology (7/74); in the upper-division baccalaureate category, 2 semester hours in introduction to automotive or transportation technology (7/74).

MC-0419-0005

MOTOR TRANSPORT OFFICER

Course Number: CEJ.

Location: Service Support School, Cp. Lejeune, NC.

Length: 6–8 weeks (221–229).

Exhibit Dates: 11/80–Present.

Learning Outcomes: Upon completion of the course, the student will be able to describe all major assemblies used in current model motor transport tactical vehicles; discuss the Marine Corps Integrated Maintenance Management System; implement record keeping functions inherent to motor transport organizations; establish a motor pool; describe special vehicle operations such as vehicle recovery, deep water fording, vehicle camouflage, loading procedures, night driving operations, and defend a tactical convoy.

Instruction: Covers an introduction to automotive components and test equipment, motor transport maintenance management, administration, motor transport vehicle operations and tactical convoy operations. Methodology includes lecture and laboratory exercises.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in vehicle maintenance and 2 in management (4/89).

MC-0602-0001

HIGH INTENSITY LANGUAGE TRAINING (VIETNAMESE)

Course Number: None.

Location: Marine Corps Schools, Quantico, VA.

Length: 6 weeks (222 hours).

Exhibit Dates: 8/67–12/70.

Objectives: To prepare selected Marine Corps Educational Center graduates for duty in an area where the primary or secondary language is Vietnamese.

Instruction: Language patterns, lexical units, and fluency necessary to communicate effectively with a native speaker; background information on culture, history, and geography; development of a vocabulary for interaction in civic action programs and liaison.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in Vietnamese (12/68).

MC-0801-0001

NUCLEAR, BIOLOGICAL AND CHEMICAL (NBC) WARFARE DEFENSE

Course Number: None.

Location: Recruit Depot, Parris Island, SC.

Length: 3 weeks (105 hours).

Exhibit Dates: 1/63–12/68.

Objectives: To train personnel for NBC defense responsibilities and instructional duties.

Instruction: Lectures and practical exercises on NBC defense, including monitor and survey teams, decontamination squads, nuclear warfare defense, biological warfare defense, chemical warfare defense, radiac instruments, protection, training and operations, types of nuclear bursts and effects, shielding of gamma radiation, blister and nerve agents, smokes and incendiaries, new developments in NBC equipment, and chemical decontamination.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (12/68).

MC-0801-0002

AFTERCARE PROGRAM MANAGEMENT

Course Number: S-501-0001.

Location: Consolidated Drug and Alcohol Center, Cp. Lejeune, NC.

Length: 2 weeks (70 hours).

Exhibit Dates: 9/85–Present.

Learning Outcomes: Upon completion of the course, the student will be able to assist recovering substance abusers in the process of conforming to aftercare prescription protocols; participate in the conducting of substance abuse education programs; and provide minimal support services to family members.

Instruction: Course introduces student to beginning skills in substance abuse, communication, data management, interviewing and case management.

Credit Recommendation: In the lower-division baccalaureate/associate degree cate-

gory, 3 semester hours in introduction to substance abuse counseling (7/87).

MC-0802-0001

1. PHYSICAL TRAINING INSTRUCTOR (MEN)
2. PHYSICAL TRAINING INSTRUCTOR

Course Number: None.
Location: Development and Education Command, Quantico, VA.
Length: *Version 1:* 11 weeks (427 hours). *Version 2:* 13 weeks (528 hours).
Exhibit Dates: *Version 1:* 5/70–12/73. *Version 2:* 2/68–4/70.
Objectives: To train enlisted personnel as instructors for close-combat and physical training.
Instruction: Lectures and practical exercises in the skills necessary to be an instructor in combat and physical training. Course provides comprehensive classroom instruction in structural and functional kinesiology, and the principles of physical training.
Credit Recommendation: *Version 1:* In the vocational certificate category, 4 semester hours in anatomy and physiology, 2 in physical education, 2 in physical education methods (7/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 2 in physical education, 2 in physical education methods (7/74); in the upper-division baccalaureate category, credit in principles of physical training on the basis of institutional evaluation (12/68). *Version 2:* In the vocational certificate category, 4 semester hours in anatomy and physiology, 2 in physical education, 2 in physical education methods (7/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in anatomy and physiology, 2 in physical education, 2 in physical education methods (7/74); in the upper-division baccalaureate category, 2 semester hours in anatomy and physiology, 2 in principles of physical training (12/68).

MC-0802-0002

SURVIVAL, EVASION, RESISTANCE TO INTERROGATION AND ESCAPE (SERE)
(Evasion, Escape and Survival Training)

Course Number: None.
Location: Mountain Warfare Training Center, Bridgeport, CA.
Length: 4 weeks (169–172 hours).
Exhibit Dates: 5/59–12/68.
Objectives: To train personnel in the practical techniques of survival, escape, resistance to interrogation, and evasion.
Instruction: Lectures and practical exercises to include land navigation, physical preparation, Communist indoctrination and interrogation techniques, resistance to Communist interrogation techniques, and prisoner organization and resistance.
Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in woodcraft and survival training (5/74).

MC-0802-0003

AMMUNITION HANDLERS

Course Number: None.
Location: Ordnance School, Quantico, VA.
Length: 6 weeks (180 hours).
Exhibit Dates: 7/58–12/68.
Objectives: To train personnel to safely handle, store, transport, and dispose of ammunition.
Instruction: Lectures and practical exercises in small arms ammunition, hand and rifle grenades, artillery and mortar ammunition, pyrotechnics, demolitions, ground rockets and guided missiles, aircraft munitions, mines and firing devices, flamethrowers, fuels, ammunition disposal, ammunition storage and inspection, and renovation and malfunctions.
Credit Recommendation: Credit is not recommended because of the military nature of the course (5/74).

MC-0802-0004

AMMUNITION TECHNICIAN

Course Number: None.
Location: Ordnance School, Quantico, VA.
Length: 10 weeks (420 hours).
Exhibit Dates: 7/54–12/68.
Objectives: To train noncommissioned officers in ammunition techniques.
Instruction: Lectures and practical exercises in fundamentals of ammunition, small arms ammunition, artillery and mortar ammunition, demolitions, aircraft munitions, land mines and firing devices, ammunition ashore, ammunition supply administration, and field storage of ammunition.
Credit Recommendation: In the vocational certificate category, 6 semester hours in armorer/demolitions (7/74).

MC-0802-0005

AMMUNITION TECHNICIAN (ADVANCED)

Course Number: None.
Location: Ordnance School, Quantico, VA.
Length: 5–8 weeks (192–327 hours).
Exhibit Dates: 7/60–12/68.
Objectives: To train personnel to supervise and manage an ammunition storage and handling facility.
Instruction: Lectures and practical exercises in sources of technical information; ammunition principles; ammunition materiel; ammunition supply procedures and allowances; detection, protection, and decontamination; inspection, surveillance, storage, transportation and disposal of ammunition, military explosives, and toxic chemical agents; and planning, establishing, and operating an ammunition unit.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour as an elective in chemical technology (5/74).

MC-0802-0006

AMMUNITION TECHNICIAN (BASIC)
(Ammunition Technician)

Course Number: None.
Location: Ordnance School, Quantico, VA.
Length: 5–9 weeks (192–360 hours).
Exhibit Dates: 7/57–1/88.
Objectives: To train personnel in phases of ammunition handling.
Instruction: Lectures and practical exercises to include identification, reception, inspection, storage, transportation, and issuance of ammunition components, military explosives, and toxic chemical agents; disposal of unserviceable ammunition; ammunition identification and terminology; technical reference materials; supply procedures; computation of allowances; and decontamination procedures and equipment.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour as an elective in chemical technology (5/74).

MC-0803-0001

CLOSE COMBAT INSTRUCTOR

Course Number: None.
Location: Physical Fitness Academy, Quantico, VA.
Length: 3 weeks (110 hours).
Exhibit Dates: 12/68–12/73.
Objectives: To train Marine Corps personnel in close-combat tactics and techniques.
Instruction: Practical study in kinesiology and military combat techniques, martial sports, instructor training, individual conditioning, and armed and unarmed combat.
Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in physical education (2/74); in the upper-division baccalaureate category, 1 semester hour in physical education (2/74).

MC-0803-0002

WATER SAFETY/SURVIVAL INSTRUCTOR

Course Number: 562.
Location: Physical Fitness Academy, Education Center, Quantico, VA.
Length: 3 weeks (100 hours).
Exhibit Dates: 2/72–12/73.
Objectives: To qualify personnel as Marine Corps water survival instructors and American Red Cross water safety instructors.
Instruction: Lectures and practical exercises in safety procedures and problem areas, water survival skills, and teaching techniques.
Credit Recommendation: In the vocational certificate category, 1 semester hour in swimming, 1 in physical education (5/74); in the lower-division baccalaureate/associate degree category, 1 semester hour in swimming, 1 in physical education (5/74); in the upper-division baccalaureate category, 1 semester hour in physical education (5/74).

MC-0803-0003

COLD WEATHER FIELD INDOCTRINATION
(Cold Weather Field Indoctrination Training for FMF Cadets and Reservists)

Course Number: None.
Location: Cold Weather Training Center, Bridgeport, CA.
Length: 3 weeks (130 hours).
Exhibit Dates: 1/59–12/68.
Objectives: To provide enlisted personnel with survival and combat training in deep snow and cold environments.
Instruction: Lectures and practical exercises in shelters and bivouacs, use of water and rations, over-snow movements, skiing, and pick-up operations.
Credit Recommendation: Credit is not recommended because of the military nature of the course (12/68).

MC-0803-0004

MOUNTAIN OPERATIONS (MILITARY SKIING)

Course Number: None.
Location: Mountain Warfare Training Center, Bridgeport, CA.
Length: 5 weeks (213 hours).
Exhibit Dates: 3/65–12/68.
Objectives: To train infantry units and reconnaissance personnel to operate in mountainous terrain.
Instruction: Lectures and practical exercises in physical training and conditioning, skiing, and equipment maintenance.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in camping and survival training (12/68).

MC-0803-0005

Mountain Operations (Rock Climbing)

Course Number: None.

Location: Mountain Warfare Training Center, Bridgeport, CA.

Length: 7 weeks (283 hours).

Exhibit Dates: 3/65–12/68.

Objectives: To train infantry units and reconnaissance personnel to operate in mountainous terrain.

Instruction: Lectures and practical exercises in mountain operations, man packs, rocks and glacier characteristics, camp and bivouac selection, and mountain walking and route selection.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in camping and survival training (12/68).

MC-0803-0006

Cold Weather Operations by Correspondence

Course Number: 03.49C.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 1/84–12/89.

Objectives: To provide Marines with information for combat in cold weather through a series of study units.

Instruction: This correspondence course covers such topics as cold weather survival, skiing and snowshoeing, and tactics and logistics in cold weather survival.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/85).

MC-0803-0007

Desert Operations by Correspondence

Course Number: 03.54.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 12/78–Present.

Objectives: To provide military personnel with the principles, procedures, and techniques of survival in the desert and its environment.

Instruction: This correspondence course covers topics such as characteristics of the desert, desert regions of the world, health and hygiene and military operations and training in the desert. A proctored final examination will be administered.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/85).

MC-0804-0001

Marine Corps Special Services Training

Course Number: None.

Location: Development and Education Command, Quantico, VA.

Length: 2 weeks (52 hours).

Exhibit Dates: 9/72–1/88.

Objectives: To train selected enlisted personnel to supervise recreational activities.

Instruction: Lectures and practical exercises in the administration of recreational activities and funds. Course includes acquisition and control of recreational facilities, property and funds; administration of insurance; and sports, entertainment, and other recreational programs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in recreation administration (8/74).

MC-1107-0001

Mathematics for Marines by Correspondence

Course Number: 13.34G.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 8/79–Present.

Objectives: To provide introductory training in algebra and geometric forms.

Instruction: This individual, self-paced self-study course in mathematics includes the following material: number systems, fractions and percents, algebra, and geometric forms.

Credit Recommendation: In the vocational certificate category, 3 semester hours in fundamentals of mathematics (technical mathematics) (8/83).

MC-1205-0001

Field Music

Course Number: None.

Location: Marine Corps Recruit Depot, Parris Island, SC; Marine Corps Recruit Depot, San Diego, CA.

Length: 12–16 weeks (480–626 hours).

Exhibit Dates: 1/59–12/68.

Objectives: To train music students in drum and bugle corps parade and ceremonial functions.

Instruction: Lectures on care of bugle and drum instruments; musical rudiments; bugle calls and techniques; music writing; drum techniques; history and duties of field music; bugle ensemble music; and practical exercises in bugle corps formations and ceremonies.

Credit Recommendation: In the vocational certificate category, credit in applied music on the basis of institutional evaluation (2/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in applied music (2/74).

MC-1205-0002

Drum and Bugle Corps

Course Number: None.

Location: Marine Corps Recruit Depot, Parris Island, SC.

Length: 12 weeks (426 hours).

Exhibit Dates: 1/73–1/88.

Objectives: To train students as musicians in a drum and bugle corps.

Instruction: Lectures and practical applications in music theory, instrumental techniques, and drill procedures; maintenance of instruments; and writing of musical notations, scales, key signatures, and triads.

Credit Recommendation: In the vocational certificate category, credit in applied music on the basis of institutional evaluation (2/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in applied music (2/74).

MC-1401-0001

Subsistence Supply Man

Course Number: None.

Location: Service Support Schools, Cp. Lejeune, NC.

Length: 5 weeks (161 hours).

Exhibit Dates: 4/73–4/83.

Objectives: To provide personnel with training in food service accounting and control procedures.

Instruction: Lectures and practical exercises on subsistence supply practices, learning the keyboard, Marine Corps directives system, calculator, subsistence accounting procedures, introduction to subsistence supply, establishment of financial status of mess and stock records, determination of requirements and requisitions subsistence operational analysis, general mess accounting and control procedures, and computation of rations and credits. See MC-1401-0007 for the exhibit after this end date.

Credit Recommendation: In the vocational certificate category, 2 semester hours in clerical procedures, 3 in food cost control (7/77).

MC-1401-0002

Ground Supply Officer Leadership

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 13 weeks (430 hours).

Exhibit Dates: 7/74–9/76.

Objectives: To provide personnel with knowledge required to operate as supervisors of unit level supply functions.

Instruction: Lectures and practical exercises in supply accounting, data processing, control procedures, Marine Corps directives, supply systems management, and service support leadership. For the course after 9/76, see MC 1405-0038.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to data processing, 3 in supply management (7/77).

MC-1401-0003

Basic Pay Entitlements by Correspondence

Course Number: 34.21.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 7/82–10/84.

Objectives: To enable the student to record, update, validate, credit, and compute basic pay entitlements for members of the Marine Corps, to include consideration of creditable and non-creditable service.

Instruction: The course includes determination of creditable and non-creditable service for pay purposes, the proper entitlements and types of basic pay, conditions for starting and stopping pay, and the establishment and maintenance of leave accounts.

Credit Recommendation: In the vocational certificate category, 1 semester hours in payroll accounting (8/84).

MC-1401-0004

Introduction to Marine Corps Accounting by Correspondence

Course Number: 34.10A.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 3/82–Present.

Objectives: To teach the basic terminology and methods of accounting , and to permit the student to obtain an overview of the Marine Corps financial management organizational structure.

Instruction: The course presents journalizing, posting, and preparation of financial statements. The organizational structure of financial management of the Marine Corps is examined, to include comptroller organizations at posts and stations. Other topics include the system of accounting, directives and files, types and status of appropriated funds, the general ledger account structure, and financial structure data elements.

Credit Recommendation: In the vocational certificate category, 1 semester hours in bookkeeping (8/84).

MC-1401-0005

PERSONAL FINANCE BY CORRESPONDENCE

Course Number: 34.20A.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 5/82–6/86.

Objectives: To be able to prepare a personal budget and to keep and reconcile a checking account; to become familiar with types of financial institutions that provide checking and savings accounts, to know the major considerations involved in purchasing a home or motor home.

Instruction: This correspondence course covers budget formulation, including the basic elements of a household budget and how to compute a budget. It also includes the use of advance pay in preparing for a permanent change of station. Financial institutions are studied from the standpoint of types of accounts and the use of bank credit cards. The use of checking accounts is also covered in detail, to include preparation of checking account documents, electronic funds transfer (direct deposit), types of endorsements, and reconciliation of an account to the bank statement. Types of savings accounts are examined, to include the need for liquidity, as opposed to specified term deposits. The use of credit is examined, to include guidelines to be followed, typical consumer credit interest charges, and, in the event of difficulties, the use of the Wage Earner's Plan in Chapter 13 of the Bankruptcy Act. Major financial considerations in purchasing a home and a motor vehicle are reviewed. Course has proctored final examination.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in personal finance (8/84).

MC-1401-0006

ADVANCED DISBURSING

Course Number: 34B.

Location: Financial Management and Personnel Administration School, Cp. Lejeune, NC.

Length: 11–12 weeks (351–421 hours).

Exhibit Dates: 10/83–Present.

Learning Outcomes: Upon completion of the course, the student will be able identify, interpret and validate travel entitlements and orders to include distance and accounting for travel time, the process of travel vouchers and the use of control logs and procedures to verify accounting data, to effectively use internal control measures to minimize travel related fraud, identify the responsibilities of a disbursing officer, prepare letters of appointment, maintain U.S. treasury checking accounts, cash funds, collections, disbursements and deposits, to compute and validate pay, allowances and deductions utilizing automated equipment.

Instruction: Lectures and practical exercises in the duties of a disbursing office, includes demonstrations and an extensive laboratory/simulation phase in field disbursing office environments.

Credit Recommendation: In the vocational certificate category, 3 semester hours in clerical procedures (9/87).

MC-1401-0007

SUBSISTENCE SUPPLY

Course Number: 303.

Location: Service Support School, Cp. Lejeune, NC.

Length: 5 weeks (126–127 hours).

Exhibit Dates: 5/83–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform basic mathematics functions, operate electronic calculators, use food service manuals and forms, maintain inventory control cards, and type letters and message for management use.

Instruction: Covers basic mathematics calculators, dining and storeroom accounting, inventory procedures, subsistence receipts and forms used in support of dining room facilities for large organization. Methodology includes lectures, discussion and use of practical application.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in office procedures (4/89).

MC-1401-0008

BASIC PAY ENTITLEMENT BY CORRESPONDENCE

Course Number: 34.21a.

Location: Marine Corps Institute, Washington, DC.

Length: 52 weeks maximum.

Exhibit Dates: 11/84–Present.

Learning Outcomes: Upon completion of the course, the student will be able to record, update, validate, credit and compute basic pay entitlements for members of the Marine Corps.

Instruction: This is a self-directed course including topics of determination of creditable and non-creditable service for pay purposes, the various entitlements and types of basic pay, conditions for starting and stopping pay, computation of leave, the maintenance of pay records during periods of absence, and the procedures for reporting absences.

Credit Recommendation: In the vocational certificate category, 1 semester hour in payroll accounting (6/89).

MC-1401-0009

PERSONAL FINANCE BY CORRESPONDENCE

Course Number: 34.20c.

Location: Marine Corps Institute, Washington, DC.

Length: 52 weeks maximum.

Exhibit Dates: 7/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to prepare a personal budget, identify the services afforded by banks and other financial institutions, use proven concepts in making personal major asset purchases, identify information in the leave and earnings statement, and assess the process used in pay computation.

Instruction: Budget formulation and analysis; personal financial planning; use of personal checking accounts; use of services afforded by financial institution; major asset purchases and credit decision; pay computation–gross and net.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in personal finance (6/89).

MC-1402-0001

FUNDAMENTALS OF DIGITAL LOGIC

Course Number: None.

Location: Air Ground Combat Training Center, Twentynine Palms, CA; Communication-Electronics School, San Diego, CA.

Length: *Version 1:* 1-3 weeks (35–117 hours). *Version 2:* 3 weeks (117 hours).

Exhibit Dates: *Version 1:* 10/68–10/75. *Version 2:* 1/66–9/68.

Objectives: To train personnel in the fundamental concepts of digital logic preparatory to further training in the maintenance of special devices.

Instruction: Lectures and practical exercises in the use of digital machines and devices in military applications; numbering systems; computer programming; fundamentals of logic design, including Boolean algebra, truth tables, and block symbolic diagrams; logic circuitry; characteristics of hardware and operations of magnetic drum, tape, disc, magnetic core, and other storage devices; analog-to-digital conversion.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in digital computer design (2/74). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in digital computer design (2/74); in the upper-division baccalaureate category, 2 semester hours in digital logic (12/68).

MC-1402-0002

SYSTEM ENGINEERING

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 12 weeks (384 hours).

Exhibit Dates: 1/72–12/73.

Objectives: To train noncommissioned officers in the programming and operation of an IBM System 360.

Instruction: Practical exercises and lectures on operation of System 360 family of computers; access methods; service and utility programs; assembler language coding; COBOL programming; job control language; FORTRAN IV; OS operations training; and data communications and management systems analysis and design.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in computer programming (2/74).

MC-1402-0003

SYSTEMS ANALYSIS AND DESIGN

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 7–8 weeks (182–203 hours).

Exhibit Dates: 3/71–12/78.

Objectives: To provide experienced programmers with a detailed understanding of systems analysis and design.

Instruction: Lectures and supervised study in system planning and design; methods and procedures of determining system requirements; input/output capabilities, available operating systems, and file design of IBM 360; system design, implementation, re-evaluation and follow-up procedures for new systems; documentation standards and techniques; and case study projects.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in systems analysis (2/74).

MC-1402-0004

Operating System Programming
(Disk Operating System Programming)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 2-12 weeks (126-833 hours).

Exhibit Dates: 1/68-12/78.

Objectives: To train personnel having no prior data processing experience to operate and program disk computer systems.

Instruction: Practical exercises and lectures on fundamentals of programming and computing systems; introduction to System 360; DOS concepts and facilities; assembler language coding; DOS I/O coding; COBOL language, programming workshop; and electrical accounting machine operations.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 8 semester hours in computer programming, 4 in computer operations, 2 in data processing (2/74).

MC-1402-0005

System 360 Operating System—Core Phase

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 102 hours.

Exhibit Dates: 9/71-7/73.

Objectives: To provide enlisted personnel with introductory training in data processing.

Instruction: Lectures and practical exercises in punched card accounting, data processing fundamentals, System/360 operating systems, job control language, and utility programs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in data processing principles (2/74).

MC-1402-0006

System 360 Operating System—Operations Phase

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 99 hours.

Exhibit Dates: 9/71-7/73.

Objectives: To train enlisted personnel as System/360 operating system computer operators.

Instruction: Lectures and practical exercises in utility programs, input/output storage devices, operator commands and statements, and machine room procedures.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operations (2/74).

MC-1402-0007

System 360 Operating System—COBOL Programming Phase

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 123 hours.

Exhibit Dates: 9/71-7/73.

Objectives: To train enlisted personnel to write and debug COBOL programs.

Instruction: Lectures and practical exercises in file organization, common business oriented language instructions, and standardized documentation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer programming (2/74).

MC-1402-0008

System 360 Operating System—Assembler Language Programming Phase

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 123 hours.

Exhibit Dates: 9/71-12/80.

Objectives: To train enlisted personnel as System/360 assembler language programmers.

Instruction: Lectures and practical exercises in data management facilities, file organization, access methods, service programs, assembler language coding instructions, and debugging methods.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer programming (2/74).

MC-1402-0009

System 360 Operating System—1401 Programming

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 152 hours.

Exhibit Dates: 9/71-7/73.

Objectives: To train enlisted personnel to program IBM 1401 computers, using assembler languages.

Instruction: Lectures and practical exercises in symbolic programming languages, autocoder programming languages, and standardized documentation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer programming (2/74).

MC-1402-0010

Systems Analysis and Design (Functional)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 4 weeks (109-117 hours).

Exhibit Dates: 9/70-12/78.

Objectives: To train officers in the methodology of systems analysis and design.

Instruction: Lectures in systems theory, system model usage, systems approach in systems development, computer systems components, number systems, data communications concepts, flow charting, systems documentation and security, and management science techniques.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in systems analysis (6/75).

MC-1402-0011

IBM System 360 (DOS) COBOL Programming

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 9 weeks (258-310 hours).

Exhibit Dates: 8/73-12/75.

Objectives: To train enlisted personnel as COBOL application programmers on the IBM disk operating system.

Instruction: Lectures on computer fundamentals, including a detailed examination of IBM operating systems and job control language; COBOL programming with American National Standard (ANS) for IBM System/360 including the sort verb and disk operating systems; and data management system (Mark IV). Coding convention differences between DOS COBOL and OS COBOL and operating systems are covered. Major programs are written, debugged, and documented.

Credit Recommendation: In the upper-division baccalaureate category, 4 semester hours in computer programming, 1 in data processing fundamentals, 1 in computer operating systems (6/75).

MC-1402-0012

Optical Character Recognition (OCR) Operations

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 2 weeks (45-60 hours).

Exhibit Dates: 6/74-6/82.

Objectives: To train enlisted personnel to operate optical character recognition systems.

Instruction: Lectures and practical exercises in data processing introduction, Hollerith punch card code, flow charting, number systems, features and functions of the 3030 page reader, the 6200 computer, and the Lundy Farrington Optical Character reader, central processing unit operation, console typewriter, tape drives, scanner unit operating techniques, and Optical Program for Users System (OPUS) operation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in unit record data processing (6/75).

MC-1402-0013

COBOL Programming
(IBM System 360 (OS) COBOL Programming)
(IBM System/360 (OS) COBOL Programming Entry-level)

Course Number: *Version 1:* 395; A-532-0015. *Version 2:* None. *Version 3:* None. *Version 4:* None.

Location: Computer Sciences School, Quantico, VA.

Length: *Version 1:* 8 weeks ,self-paced (286 hours). *Version 2:* 8 weeks (304 hours). *Version 3:* Self-paced 8 weeks (287 hours). *Version 4:* 8 weeks (228-280 hours).

Exhibit Dates: *Version 1:* 1/86-Present. *Version 2:* 7/77-12/85. *Version 3:* 4/75-6/77. *Version 4:* 8/73-3/75.

Objectives: To provide technical education to entry-level personnel in the basic concepts of data processing and the COBOL language.

Instruction: *All Versions:* Lectures and practical exercises on American National Standard COBOL including the sort verb, computer programming introduction, IBM S/360 computer concepts, programming techniques, COBOL coding, documentation conventions, IBM Operating System (OS) programming, job control language, and testing and debugging techniques. *Version 2:* This version used computer based instruction, practical laboratory experience, and self-paced study. Students learn fundamentals and advanced data processing concepts, structured flowcharting, and programming techniques, coding, debugging of ANSI COBOL programs, and OS/VS JCL via terminal entry. Table handling techniques, the sort verb, call features, and VSM processing are covered in this course. *Version 3:* Version is self-paced and uses structural approach to COBOL programming. Also covere ISAM file organization and OS system utilities.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 1 semester hours in introduction to data processing, 4 in introduction to COBOL (COBOL I), and 4 in advanced COBOL (COBOL II) (3/88). *Version 2:* In the upper-division baccalaureate category, 5 semester hours in COBOL programming, 1 in data processing fundamentals (2/87). *Version 3:* In the upper-division baccalaureate category, 4 semester hours in computer programming, 1 in data processing (12/77). *Version 4:* In the upper-division baccalaureate category, 4 semester hours in computer programming, 1 in data processing fundamentals (6/75).

MC-1402-0014

Automatic Data Processing (ADP) Orientation

Course Number: *Version 1:* 393. *Version 2:* None.

Location: Computer Sciences School, Quantico, VA.

Length: 2 weeks (53-65 hours).

Exhibit Dates: *Version 1:* 6/88-Present. *Version 2:* 9/70-5/88.

Objectives: To familiarize students with principles, methods, and techniques of data processing and to train them in systems analysis, automatic data processing equipment operation, and automated information systems management.

Instruction: Lectures and problem solving exercises in computer systems fundamentals, information system development, interactive terminal facility usage, BASIC language and programming, remote teletype terminals usage, effective communication, ADP organization and systems, hardware components, logical problem-solving methods and classical scientific management tools and techniques, and information system development.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in data processing fundamentals (12/77).

MC-1402-0015

Systems Programming

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 7 weeks (141 hours).

Exhibit Dates: 9/70-5/81.

Objectives: To train experienced assemblers, or COBOL programmers who have a firm understanding of operating systems to be IBM S/360 Operating System (OS) and HASP system programmers.

Instruction: Lectures and hands-on applications in computer operations (OS), utilities, job/task/data management, writing system routines, generating an IBM S/360 operating system, system routine programming, computer system performance measurement, reference manual maintenance, and IBM S/360 computer system briefings and instructions. Students generate both MFT and MVT environments and write routines to maintain system supervisor and overall system performance.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in operating systems (6/75).

MC-1402-0016

Programming for Optical Character Recognition (OCR) System

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 5 weeks (136 hours).

Exhibit Dates: 6/74-12/75.

Objectives: To train enlisted personnel as application programmers for the Lundy/Farrington 3030 optical character recognition system.

Instruction: Lectures and practical exercises in optical character recognition system development; forms design, form specification, and system overview; L/F 3030 OCR system operating principles and peripheral devices; OCR instruction coding; octal numbering system; program maintenance, and 3030 reader control program standard sequences and modification methods for the programmers application.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer programming (4/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in computer programming (4/74); in the upper-division baccalaureate category, 3 semester hours in computer programming (4/74).

MC-1402-0017

Data Systems (Enlisted)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 7 weeks (192 hours).

Exhibit Dates: 9/70-12/73.

Objectives: To provide operators and programmers with advanced technical training in data processing.

Instruction: Lectures and practical exercises in IBM S/360 hardware; S/360 operating system organization and functions, operating system job control language coding; programming with COBOL, FORTRAN, and BASIC languages; performance evaluation and job-scheduling techniques; and analysis, design, and operation of a data communications-oriented computer system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer programming, 1 in teleprocessing (4/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in computer programming, 1 in teleprocessing (4/74); in the upper-division baccalaureate category, 3 semester hours in computer programming, 1 in teleprocessing (4/74).

MC-1402-0018

IBM System 360 Disk Operating System (DOS) Operations

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 6 weeks (167-168 hours).

Exhibit Dates: 8/73-12/75.

Objectives: To train enlisted personnel to operate computers.

Instruction: Lectures and practical exercises in data processing fundamentals, central processing unit operation, and IBM/360 peripheral equipment operation, with emphasis on operator commands associated with the S/360 operating system under HASP and disk operating system.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operations, 1 in data processing fundamentals (6/75).

MC-1402-0019

Electrical Accounting Machines (EAM)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 3 weeks (105 hours).

Exhibit Dates: 8/73-12/74.

Objectives: To train enlisted personnel to operate unit record equipment.

Instruction: Lectures and practical exercises in data processing introduction, Hollerith card code, 029 card punch, 059 card verifier, 083/084 sorters, 557 interpreter operation and wiring, 517 reproducer and 088 collator operation procedures, and data processing installation orientation and management responsibilities.

Credit Recommendation: In the vocational certificate category, 2 semester hours in unit record data processing (4/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in unit record data processing (4/74).

MC-1402-0020

1. Data Processing Management Seminar
2. Data Processing Installation Management Seminar
3. Data Processing Installation Managers Seminar
4. Data Processing Installation Management

Course Number: *Version 1:* 39A. *Version 2:* None. *Version 3:* None. *Version 4:* None.

Location: Computer Sciences School, Quantico, VA.

Length: *Version 1:* 4 weeks (144 hours). *Version 2:* Self-paced 4 weeks (95-126 hours). *Version 3:* 4 weeks (95-126 hours). *Version 4:* 4 weeks (95-126 hours).

Exhibit Dates: *Version 1:* 2/80-1/84. *Version 2:* 1/77-1/80. *Version 3:* 7/74-12/76. *Version 4:* 9/70-6/74.

Objectives: To educate data processing personnel in the supervisory and management concepts and skills required to manage a data processing installation.

Instruction: *Version 1:* Lectures and practical exercises in a broad spectrum of fiscal, administrative, personnel and project management and performance monitoring techniques as applied to management of a data processinginstallation. ADP standards, installation security and production management are included. *Version 2:* Lectures and practical exercises in a broad spectrum of fiscal, administrative, personnel and logistical management techniques as applied to data processing installation management. Zero-based budgeting is included. *Version 3:* Lectures and practical exercises in data processing equipment management, production management, installation security, standards and installation planning, administrative procedures (including reporting requirements) and management control techniques. *Version 4:* Lectures and practical exercises in data processing equipment management, production management, installation security, standards and installation planning, administrative procedures (including reporting requirements) and management control techniques.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in data processing management (1/81). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in data processing management (12/77). *Version 3:* In the upper-division baccalaureate category, 2 semester hours in data processing management (6/75). *Version 4:* In the upper-division baccalaureate category, 3 semester hours in data processing management (7/74).

MC-1402-0021

ADVANCED DATA SYSTEMS OFFICER

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 12 weeks (296 hours).

Exhibit Dates: 9/70–6/84.

Objectives: To train experienced systems analysts to manage data processing installations.

Instruction: Lectures and practical exercises in digital computer systems hardware and software requirements, real-time computer systems characteristics, and information systems development, Mk IV language, and IBM/360 system operation.

Credit Recommendation: In the vocational certificate category, 4 semester hours in data processing management (4/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in data processing management (4/74); in the upper-division baccalaureate category, 4 semester hours in data processing management (4/74).

MC-1402-0022

ADVANCED OPERATIONS TECHNIQUES
(IBM System 360 (OS) Advanced Operations Techniques)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 6 weeks (196-201 hours).

Exhibit Dates: 5/74–12/75.

Objectives: To train computer operators to control and operate an IBM S/360 multiprogramming environment running under the OS-operating system and to provide an understanding of COBOL programming problems and techniques.

Instruction: Lectures and practical exercises in S/360 operating system with HASP and standard utility programs, system job control language detailed study, multisystems operation techniques and production scheduling, data processing resources management, and COBOL programming introduction, with emphasis on reading core dumps of abnormally terminated jobs.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operations (6/75); in the upper-division baccalaureate category, 2 semester hours in computer programming (6/75).

MC-1402-0023

COMPUTER OPERATOR
(IBM S/360 OS Computer Operator)
(IBM System 360 Operating System (OS) Operations)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: *Version 1:* 4 weeks (122 hours). *Version 2:* 6 weeks (110 hours). *Version 3:* 4-5 weeks (110-141 hours).

Exhibit Dates: *Version 1:* 3/86–Present. *Version 2:* 1/83–2/86. *Version 3:* 8/73–12/82.

Objectives: To train enlisted personnel to operate the IBM system 360 computer running under the Operating System (OS).

Instruction: *Version 1:* This course consists of lectures and practical exercises in basic computer fundamentals, fundamentals of virtual storage and paging, MUS commands, JESZ commands, MVS IPL operations, and the understanding and operation of the Systesm 4300 CPU, 1052 master console, 2540 card reader/punch, 2420 tape drive, 4245 printer, 3880 storage controller and the 3380 disk drive. *Version 2:* Lectures and practical exercises in Hollerith punch card code, flow charting, number systems, virtual storage concepts, IBM System 360 OS/MVS job control language (JCL), computer organization channel concepts, control units, IBM System MVS 360/2040 central processing unit, IBM 1052 console typewriter, IBM 1403 printer, IBM 2540 card reader/punch, Memorex 660 disk drives, IBM 2420 tape drives, IBM System 360 OS initial program load (IPL) procedures, operator commands, and statements for the Operating System (OS) and HASP, with an introduction to JESZ. *Version 3:* Lectures and practical exercises in Hollerith punch card code, flow charting, number systems, IBM System 360 OS job control language (JCL), computer organization channel concepts, control units, IBM System 360/2040 central processing unit, IBM 1040 console typewriter, IBM 1403 printer, IBM 2540 card reader/punch, Calcomp CD12 disk drives, IBM 2420 tape drives, IBM System 360 OS initial program load (IPL) procedures, operator commands, and statements for the Operating System (OS) and HASP.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operation (10/86). *Version 2:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operations, 1 in data processing fundamentals (10/86). *Version 3:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer operations, 1 in data processing fundamentals (12/77).

MC-1402-0024

IBM SYSTEM 360 (OS) ADVANCED PROGRAMMING TECHNIQUES)
(Advanced Programming Techniques)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 8 weeks (219-229 hours).

Exhibit Dates: *Version 1:* 1/76–12/80. *Version 2:* 6/74–12/75.

Objectives: To train experienced COBOL programmers to write programs in IBM S/360 (OS) assembler language.

Instruction: *Version 1:* Lectures and practical exercises in advanced systems of American National Standard (ANSI) COBOL, debugging utilizing system dumps, IBM 360 operating system (OS), utilities, job control language (JCL), structured approach to programming, and introduction to systems analysis and design. *Version 2:* Lectures and practical exercises in IBM S/360 Operating System (OS) assembler language, IBM S/360 Operating System (OS) and job control language, COBOL language and MARK IV file management system techniques, and data management facilities usage.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in advanced computer programming, 2 in systems analysis and design (12/77). *Version 2:* In the upper-division baccalaureate category, 5 semester hours in computer programming (6/75).

MC-1402-0025

DATA SYSTEMS OFFICERS
(Data Systems Officer)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: *Version 1:* 13 weeks (461 hours). *Version 2:* 13 weeks (366-368 hours).

Exhibit Dates: *Version 1:* 1/77-12/80. *Version 2:* 9/70-12/76.

Objectives: To provide officers with technical data processing training primarily in the area of computer programming.

Instruction: *Version 1:* Lectures and practical exercises in data processing fundamentals, COBOL, Mark IV, job control language (JCL), file management and sequential, indexed sequential, and direct-access storage methods. Course includes systems analysis and design and core dump reading in conjunction with COBOL programming. *Version 2:* Lectures and practical exercises in data processing fundamentals, Basic Assembler Language (BAL), COBOL, FORTRAN, MARK IV, job control language (JCL), file management, and sequential, indexed sequential, and direct-access storage methods.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 5 semester hours in computer programming, 3 in systems analysis and design (12/77). *Version 2:* In the upper-division baccalaureate category, 8 semester hours in computer programming (6/75).

MC-1402-0026

FISCAL ACCOUNTING CLERK
(Fiscal Accounting)

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 9 weeks (255-288 hours).

Exhibit Dates: 7/75-11/86.

Objectives: To train officers and enlisted personnel in accounting skills and the application of these skills to a mechanized accounting system.

Instruction: Lectures, demonstrations, and illustrative problems in basic accounting procedures required to provide the student with a working knowledge of formal mechanized accounting techniques and their application to a computer system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in bookkeeping (7/77); in the lower-division baccalaureate/associate degree category, 3 semester hours in introduction to data processing (7/77).

MC-1402-0027

ADVANCED MARK IV PROGRAMMING
(Advanced Mark IV File Management System)
(Advanced Mark IV)

Course Number: None.

Location: Computer Science School, Quantico, VA.

Length: Self-paced 2 weeks (60–80 hours).

Exhibit Dates: 7/74–1/88.

Objectives: To train Mark IV programmers to utilize the advanced features of the Mark IV information retrieval and reporting language.

Instruction: Lectures and practical exercises involving table look-up techniques, file indexing, access methods, file management, and data retrieval and reporting. Self-paced study teaches the special features of Mark IV which include extended segment processing, extended reporting, file processing, coordinated files, text processing, transaction processing and hierarchical record structure processing.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in computer programming (1/83).

MC-1402-0028

Marine Corps Integrated Maintenance Management System (MIMMS)
(Marine Corps Integrated Maintenance Management Officers)

Course Number: None.

Location: Supply Center, Albany, GA.

Length: *Version 1:* 4 weeks (125 hours). *Version 2:* 6 weeks (238 hours).

Exhibit Dates: *Version 1:* 1/80–Present. *Version 2:* 2/75–12/79.

Objectives: To train selected officers for the administration and management of maintenance management billets.

Instruction: Lectures and practical exercises in maintenance management information systems, maintenance records, production and resources, supply support, leadership and management, and Marine Corps procedures.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 1 semester hour in electronic data processing (6/75).

MC-1402-0030

IBM System 360 OS Programming

Course Number: 5OZX5144-2.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 10 weeks (385 hours).

Exhibit Dates: 9/74–10/82.

Objectives: To provide technical education for personnel to prepare them for duties as an IBM System 360 OS ALC programmer and entry-level systems programmer.

Instruction: Course consists of IBM System 360 (OS) Advanced Coding (5OZX5144-14) (see exhibit MC-1402-0037), IBM System 360 OS Assembler Language (5OZX5144-3) (see exhibit MC-1402-0031), IBM System 360 OS System Control (5OZX5144-5) (see exhibit MC-1402-0033) and IBM System 360 (OS) Data Management (5OZX5144-16) (see exhibit MC-1402-0039).

Credit Recommendation: In the upper-division baccalaureate category, 5 semester hours in computer programming, 2 in advanced computer programming, 1 in operating systems (12/77).

MC-1402-0031

IBM System 360 OS Assembler Language

Course Number: *All Versions:* 5OZX5144-3; 5OZX5144-8. *Version 1:* 38P; E50ZX5135B-001.

Location: Computer Sciences School, Quantico, VA.

Length: *Version 1:* Self-paced 4 weeks (Maximum 210 hours). *Version 2:* Self-paced 4 weeks (162 hours).

Exhibit Dates: *Version 1:* 7/78–12/83. *Version 2:* 9/74–6/78.

Objectives: To train experienced students to code in Basic Assembler Language (BAL).

Instruction: The self-paced course includes practical exercises encompassing all phases of BAL coding, including fixed and floating point instructions. Subprogram linkage and macros are also discussed. A variety of problem applications are written, coded, and debugged.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 4 semester hours in assembler programming (1/81). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in computer programming (12/77).

MC-1402-0032

IBM System 360 OS Systems Programming

Course Number: 5OZX5144-4.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 6 weeks (223 hours).

Exhibit Dates: 9/74–5/81.

Objectives: To provide technical education to personnel trained in System 360 Assembler Language to prepare them for duties as an entry-level systems programmer.

Instruction: Course consists of IBM System 360 (OS) Advanced Coding (5OZX5144-14) (see exhibit MC-1402-0037), IBM System 360 OS System Control (5OZX5144-5) (see exhibit MC-1402-0033) and IBM System 360 (OS) Data Management (5OZX5144-16) (see exhibit MC-1402-0039).

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in operating systems, 1 in computer programming, 2 in advanced computer programming (12/77).

MC-1402-0033

System Control
(IBM System 360 OS System Control)

Course Number: T2G; 5OZX5144-5; E50ZX5135B-003.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 2 weeks (81 hours).

Exhibit Dates: 9/74–1/90.

Objectives: To train programmers in the use of Job Control Language and selected utility programs for an IBM System 360 operating system (OS).

Instruction: A self-paced course requiring practical exercises in the use of IBM System 360 Job Control Language and utility programs. Course includes load modules, creation, retrieval and concatenation of cataloged data sets, use of linkage editor, and overlay features.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in advanced computer programming (12/77).

MC-1402-0034

FORTRAN Program Specialist
(IBM System 360 OS FORTRAN Programming)

Course Number: *Version 1:* T2H; E5OZX4924-000/RRM; A-532-0031. *Version 2:* 5OZX5144-6.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 2 weeks (70–90 hours).

Exhibit Dates: *Version 1:* 1/86–Present. *Version 2:* 9/74–12/85.

Objectives: To train students with a programming background in the uses of the VS FORTRAN 77 programming languages.

Instruction: A self-paced course requiring practical exercises in terminal entry coding, debugging and executing application programs using the FORTRAN programming language. Course includes the use of arrays, input-output operations, subprogram linkage, and processing of sequential and direct-access data sets.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 2 semester hours in computer programming (2/90). *Version 2:* In the upper-division baccalaureate category, 2 semester hours in computer programming (12/77).

MC-1402-0035

IBM System 360 OS PL/1 Programming

Course Number: T2J; E50ZX5135B-005; 5OZX5144-7.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 3 weeks (135 hours).

Exhibit Dates: 9/74–12/83.

Objectives: To train students to program in PL/1 as a second language.

Instruction: A self-paced course requiring practical exercises involving arithmetic expressions, constants, logical operations, arrays and DO loops, fixed-point expressions, structures, built-in functions, stream and record oriented I/O, and indexed sequential file handling.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in computer programming (12/77).

MC-1402-0036

IBM System/360 (OS) COBOL Programming Specialist
(IBM System 360 (OS) COBOL Programming)

Course Number: 72K; E50ZX5135B-006; 5OZX5144-8.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 2 weeks (90 hours).

Exhibit Dates: 9/74–7/86.

Objectives: To train students with a programming background to program in COBOL.

Instruction: Self-paced course requiring practical exercises involving coding, debugging, and executing COBOL programs. Course includes sequential as well as indexed sequential file access methods, subprogram linkage, sequential file updating and edited report output utilizing structured programming techniques.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in computer programming (1/81).

MC-1402-0037

IBM System 360 (OS) Advanced Coding

Course Number: 5OZX5144-14.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 2 weeks (72 hours).

Exhibit Dates: 9/74–5/81.

Objectives: To train students to handle IBM System 360 operating system data management, task management, and system generation.

Instruction: A self-paced course requiring practical exercises involving the handling of load modules, channel programming, task management, concurrent processing and system generation concepts and procedures.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in operating systems (12/77).

MC-1402-0038

IBM System 360 OS System Control and Data Management

Course Number: DAA; E50ZX5135B-008; 5OZX5144-15.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 4 weeks (151 hours).

Exhibit Dates: 9/74–2/86.

Objectives: To provide technical education in IBM System 360 OS system control and data management.

Instruction: Course consists of IBM System 360 OS System Control (5OZX5144-5) (see exhibit MC-1402-0033) and IBM System 360 (OS) Data Management (5OZX5144-16) (see exhibit MC-1402-0039).

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in computer programming, 2 in advanced computer programming (12/77).

MC-1402-0039

IBM System 360 (OS) Data Management

Course Number: 5OZX5144-16.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 2 weeks (70 hours).

Exhibit Dates: *Version 1:* 7/78–10/86. *Version 2:* 9/74–6/78.

Objectives: To provide technical education to experienced programmers in the specialized area of data management access methods using assembler language.

Instruction: A self-paced course of instruction to train programmers in the specific use of IBM file organization and access methods. Included are assembler program exercises using QSAM, BSAM, BPAM, BISAM, QISAM, and BDAM access methods.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 1 semester hour in file access methods (computer programming) (1/81). *Version 2:* In the upper-division baccalaureate category, 1 semester hour in computer programming (12/77).

MC-1402-0040

Marine Assembler Language Programming

Course Number: 5OZX5144-17.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 8 weeks (313 hours).

Exhibit Dates: 9/74–12/83.

Objectives: To provide technical education to experienced programmers in assembler language.

Instruction: Course consists of IBM System 360 OS Assembler Language (5OZX5144-3) (see exhibit MC-1402-0031), IBM System 360 OS System Control (5OZX5144-5) (see exhibit MC-1402-0033), and IBM System 360 (OS) Data Management (5OZX5144-16) (see exhibit MC-1402-0039).

Credit Recommendation: In the upper-division baccalaureate category, 5 semester hours in computer programming, 2 in advanced computer programming (12/77).

MC-1402-0041

IBM System 360 (OS) Systems Programmer

Course Number: 40S; E50ZX5135A-000; A-535-0027; 5OZX5144-19.

Location: Computer Sciences School, Quantico, VA.

Length: 9 weeks (130–244 hours).

Exhibit Dates: 6/75–5/81.

Objectives: To train experienced programmers in the system programming functions required to generate and maintain an IBM System 360 operating system with HASP.

Instruction: Lecture, practical exercises, and hands-on applications in computer operations (OS), system generation, system programming, computer system performance evaluation and tuning, catalog and library management, and teleprocessing application.

Credit Recommendation: In the upper-division baccalaureate category, 6 semester hours in operating systems (1/81).

MC-1402-0042

OS/VS2 MVS Data Control Techniques
(Data Control Techniques)
(IBM System 360 (OS) Data Control Techniques)

Course Number: 39G.

Location: Computer Sciences School, Quantico, VA.

Length: *Version 1:* Self-paced 6–7 weeks (212–244 hours). *Version 2:* 6 weeks (226 hours). *Version 3:* 6 weeks (180 hours).

Exhibit Dates: *Version 1:* 1/83–Present. *Version 2:* 3/80–12/82. *Version 3:* 8/75–2/80.

Objectives: To train enlisted personnel in data control techniques to prepare them as data controllers for the IBM System 360 computer system utilizing HASP.

Instruction: *Version 1:* Lectures and practical exercises provide the student with in-depth knowledge of the IBM OS/VS2 MVS JCL utilities and production job procedures including catalog procedures, disk space calculation, library maintenance, buffer and blocking optimization, and memory dump readings. *Version 2:* Lectures and practical exercises designed to provide operations personnel with working knowledge of IBM System 360 Job Control Language (JCL), utilities, and HASP capabilities. Included are cataloging in-stream procedures, updating system catalog, restart procedures, optimization of buffering and blocking of core storage and disk, disk space calculations, and core dump readings. *Version 3:* Lectures and practical exercises designed to provide operations personnel with working knowledge of IBM System 360 Job Control Language (JCL), utilities, and HASP capabilities. Included are cataloging in-stream procedures, updating system catalog, restart procedures, optimization of buffering and blocking of core storage and disk, disk space calculations, and core dump readings.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in computer operations/programming/systems programming (2/90). *Version 2:* In the upper-division baccalaureate category, 4 semester hours in OS JCL (1/81). *Version 3:* In the upper-division baccalaureate category, 4 semester hours in computer programming (12/77).

MC-1402-0043

IBM System 360 OS FORTRAN IV Language (Entry-level)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: Self-paced 8 weeks (320 hours).

Exhibit Dates: 4/75–10/82.

Objectives: To train entry-level data processing students as FORTRAN programmers on the IBM System 360.

Instruction: A self-paced course requiring practical exercises in coding, debugging, and executing application programs using the FORTRAN programming language. Course includes an introduction to data processing concepts and hardware, flowcharting and problem solution, compiler principles and FORTRAN coding conventions. Use of arrays, input-output operations, subprograms linkage, and processing of direct-access data sets are covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in introduction to data processing (12/77); in the upper-division baccalaureate category, 4 semester hours in computer programming (12/77).

MC-1402-0045

Tactical General Purpose Computer Technician

Course Number: None.

Location: Air Ground Combat Training Center, Twentynine Palms, CA.

Length: 26 weeks (960 hours).

Exhibit Dates: 1/79–12/83.

Objectives: To train enlisted personnel to install, inspect, test, and repair tactical general purpose computers and assorted peripheral equipment.

Instruction: For this course after 12/83 see MC-1402-0056. Lectures and practical exercises in binary operations and basic digital computer theory. Applications to the CP808 computer, the OJ-65 I/O console, the AN/UYK-7 computer, the AN/UYK-20 and the RD-358.

Credit Recommendation: In the vocational certificate category, 9 semester hours in computer systems (3/79); in the lower-division baccalaureate/associate degree category, 3 semester hours in computer software, 3 in computer systems at the engineering or engineering technology level (3/79).

MC-1402-0046

SCANDATA Programming

Course Number: 38S.

Location: Computer Sciences School, Quantico, VA.

Length: 3 weeks (90–120 hours).

Exhibit Dates: 7/79–10/86.

Objectives: To provide technical training to COBOL programmers to enable them to program the SCANDATA 2250/2.

Instruction: Course provides a basic introduction to SCANDATA computer programming, including SCANDATA concepts, 2250/2 Para-COBOL and programming techniques.

Credit Recommendation: Credit is not recommended because of the limited specialized nature of the course (10/86).

MC-1402-0047

Data Systems Officer

Course Number: 399.

Location: Computer Sciences School, Quantico, VA.

Length: 8–13 weeks (291–457 hours).

Exhibit Dates: 4/78–1/90.

Objectives: To provide technical education in data processing to officers, preparing them for data processing management.

Instruction: Course consists of lectures and practical exercises in data-processing fundamentals, Mark IV, job control language (JCL), and OS utilities. Course includes systems analysis and design and management concepts as applied to a data-processing installation. The course offers an 8-week long core program in which is included the course listed as exhibit MC-1402-0048 (Systems Analysis and Design (Orientation) I The Domain of the Problem) and credit for that course is included in the credit recommendation listed here. Students complete the core and have option of a number of electives. For credit recommendations for electives, see individual entries.

Credit Recommendation: In the upper-division baccalaureate category, 2 semester hours in file management and OS JCL, 1 in data processing fundamentals, 1 in systems analysis and design, 1 in data processing management (1/81).

MC-1402-0048

SYSTEMS ANALYSIS AND DESIGN (ORIENTATION) I

(Systems Analysis and Design (Orientation) I The Domain of the Problem)

Course Number: 39B.

Location: Computer Sciences School, Quantico, VA.

Length: 2 weeks (60-69 hours).

Exhibit Dates: 1/79-10/86.

Objectives: To provide an orientation to the concepts, methodologies, and techniques used in problem analysis.

Instruction: This course presents lectures and practical exercises in systems development life cycle and techniques with emphasis on the team concept using the structural approach (Hierarchical plus Input Process Output) (HIPO). The course includes a feasibility study to produce system objectives and functional descriptions.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in systems analysis (1/81).

MC-1402-0049

SYSTEMS ANALYSIS AND DESIGN (ORIENTATION) II

(Systems Analysis and Design (Orientation) II The Domain of the Solution)

Course Number: None.

Location: Computer Sciences School, Quantico, VA.

Length: 3 weeks (82 hours).

Exhibit Dates: 1/79-10/86.

Objectives: To provide an orientation to the concepts, methodologies, and techniques used in problem solution.

Instruction: Major topics include review of system development life cycle, team concept and approach to systems development, structured walkthrough of systems development documents, structured design methodology applied to the system development process, and system documentation using Hierarchical plus Input Process Output (HIPO); concentration on the system development life cycle as it relates to the Domain of the Solution, preparation of the systems specifications, data base specifications using structured design and Hierarchical plus Input Process Output (HIPO) techniques; system user, operator and program maintenance manuals; the test plan; and implementation plan.

Credit Recommendation: In the upper-division baccalaureate category, 1 semester hour in systems analysis (1/81).

MC-1402-0050

AUTOMATED DATA PROCESSING EQUIPMENT FOR THE FLEET MARINE

(Automated Data Processing Equipment - Fleet Marine Force Programmer)

Course Number: 38U.

Location: Computer Sciences School, Quantico, VA.

Length: 4 weeks (127-128 hours).

Exhibit Dates: 1/83-Present.

Learning Outcomes: Upon completion of the course, the COBOL programmers will be able to perform duties as applications programmers for the IBM 4110 system.

Instruction: The course is designed as a basic introduction to the operation and programming of the IBM 4110 computer. Instruction is primarily lecture with hands-on lab experience. Topics covered include 4110 operating characteristics, software installation, utilities, event driven language and COBOL programming.

Credit Recommendation: In the vocational certificate category, 3 semester hours in computer operations/programming (10/86).

MC-1402-0051

IBM S/360 ASSEMBLER LANGUAGE CODING (ENTRY)

(Assembler Language Code (ALC) Programming (Combination)

Course Number: 38R; A-532-0030; E5OXZ4924-002.

Location: Computer Sciences School, Quantico, VA.

Length: 8 weeks (285-320 hours).

Exhibit Dates: 12/80-Present.

Objectives: To provide technical training for experienced programmers in using assembler language coding as a second programming language or to provide background skills for entry-level systems programming.

Instruction: This course provides a detailed introduction in ALC for IBM specific equipment via terminal data entry for coding, testing and debugging and includes, but is not limited to, input and output processing, logical instructions, floating point, macros and sub-programming. Heavy emphasis is placed on JCL, OS, utilities and linkage editor usage as well as various access methods and file organization techniques including QSAM, BSAM, QISAM and BDAM.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester houts in assembly language coding (10/86); in the upper-division baccalaureate category, 3 semester hours in advanced assembly language coding (10/86).

MC-1402-0052

MULTIPLE VIRTUAL STORAGE (MVS) FUNDAMENTALS AND LOGIC

Course Number: D2C.

Location: Computer Sciences School, Quantico, VA.

Length: 6 weeks (196 hours).

Exhibit Dates: 1/83-Present.

Objectives: To provide the experienced dataprocessor knowledge of the Multiple Virtual Storage (MVS) Operating System.

Instruction: Lectures covering these major topics: system resource manager, job entry subsystem, storage management, data management, diagnostics, supervisor services, service aids and utilities, system generation and maintenance, and system modification program (SMP4).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 6 semester hours in introduction to system programming (10/86); in the upper-division baccalaureate category, 3 semester hours in advanced system programming (10/86).

MC-1402-0053

MULTIPLE VIRTUAL STORAGE (MVS) DIAGNOSTICS

Course Number: D2H.

Location: Computer Sciences School, Quantico, VA.

Length: 3 weeks (78 hours).

Exhibit Dates: 1/83-Present.

Objectives: To provide the experienced system programmer the basic knowledge and skills required to isolate system problems to the component level.

Instruction: Lectures covering these major topics: job entry system (JES) control blocks and dumps, control block chains, recovery management support (RMS), MVS application dumps, SVC dumps, stand alone dumps, traces/slip/per, SMF and LOGREC, and interactive problem control system (IPCS).

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in advanced system programming-diagnostics (10/86).

MC-1402-0054

MULTIPLE VIRTUAL STORAGE (MVS) PERFORMANCE AND TRAINING

Course Number: D2J.

Location: Computer Sciences School, Quantico, VA.

Length: 3 weeks (94 hours).

Exhibit Dates: 4/84-Present.

Objectives: To provide the experienced system programmer the basic knowledge and skills required to fine tune an MVS system through performance-oriented reports.

Instruction: Lectures and case studies covering these major topics: I/O tuning, auxiliary storage manager, system resource manager (SRM) parameters, SRM guidelines, resource measurement facility (RMF), statistical analysis of RMF data using SAS.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in advanced system programming-performance and tuning (10/86).

MC-1402-0055

FISCAL ACCOUNTING

Course Number: 34N.

Location: Financial Management and Personnel Administration School, Cp. Lejeune, NC.

Length: 9 weeks (285 hours).

Exhibit Dates: 12/86-Present.

Learning Outcomes: Upon completion of the course, the student will be able to record basic accounting transactions in accordance with generally accepted accounting principles, post to the ledger and summarize accounting data to final balance, prepare worksheets and end of accounting period task, prepare accounting reports, apply aforementioned learned competencies through the use of a mechanized (computerized) data entry device in accordnance with the financial management structure of the Marine Corps.

Instruction: Lectures, demonstrations, and illustrative problems in basic accounting procedures required to provide the student with a working knowledge of formal mechanized accounting techniques and their application to a computer system.

Credit Recommendation: In the vocational certificate category, 3 semester hours in bookkeeping (9/87); in the lower-division baccalaureate/associate degree category, 3 semester hours in data processing and 3 in accounting survey (9/87).

MC-1402-0056

Tactical General Purpose Computer Technician

Course Number: DA9.

Location: Communications-Electronics School, Twentynine Palms, CA.

Length: 31-32 weeks (1100 hours).

Exhibit Dates: 1/84-Present.

Learning Outcomes: Upon completion of the course the student will be able to apply the principles of computer organization and architecture, basic software concepts, computer systems, and computer peripherals to the troubleshooting and repair of two different computer systems and the associated peripherals.

Instruction: For this course before 1/84 see MC-1402-0045. Lectures and practical exercises on topics related to computer organization, troubleshooting and repair.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 5 semester hours in computer systems and organization and 3 in computer systems troubleshooting and maintenance (2/89).

MC-1403-0001

Unit Diary Clerk

Course Number: None.

Location: Service Support School, Cp. Lejeune,NC; Schools Battalion, Cp. Pendleton, CA; Recruit Depot, Parris Island, SC.

Length: 4-5 weeks (142-182 hours).

Exhibit Dates: 1/72-9/84.

Objectives: To train enlisted personnel to prepare unit diaries.

Instruction: Lectures and practical exercises in assembling source material; drafting; typing; auditing quality control systems; and certifying and distributing the unit diary.

Credit Recommendation: Credit is not recommended because of the military nature of the course (3/74).

MC-1403-0002

Administrative Clerk

Course Number: None.

Location: Personnel Administration School, Cp. Pendleton, CA; Schools Battalion, Parris Island, SC.

Length: 3 weeks (112-119 hours).

Exhibit Dates: 7/73-5/84.

Objectives: To train selected personnel in the fundamentals of personnel administration.

Instruction: Practical exercises in typing, filing, and correspondence.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 2 semester hours in typing and office procedures (8/77).

MC-1403-0003

Personal Financial Records Clerk
(Basic Disbursing Clerk)

Course Number: None.

Location: Personnel Administration/Disbursing School, Cp. Lejeune, NC; Service Support School, Cp. Lejeune, NC.

Length: 6-8 weeks (177-249 hours).

Exhibit Dates: 9/65-9/83.

Objectives: To train enlisted personnel in the basic concepts, fundamentals, and principles of payroll disbursing including typing and necessary clerical procedures.

Instruction: Practical experience in disbursing, military pay records, correspondence, and office machines.

Credit Recommendation: In the vocational certificate category, 2 semester hours in personal typing, 2 in clerical procedures (7/77).

MC-1403-0004

Files, Directives, and Publications by Correspondence

Course Number: 01.32E.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 7/81-12/85.

Objectives: To train military personnel in the functional file system.

Instruction: This correspondence course involves instructions and applications in on-job training to identify and apply the general procedures for subject filing of publications to interpret and implement directives for retention, transfer, and disposition of files.

Credit Recommendation: Credit is not recommended because of the limited, technical nature of the course (8/83).

MC-1403-0005

Basic Travel Clerk

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 5-7 weeks (122-193 hours).

Exhibit Dates: 7/74-7/83.

Objectives: To provide enlisted personnel with instruction in basic travel procedures and to provide the clerical experiences necessary to insure conformance to travel regulations.

Instruction: Practical exercises and experiences in preparing travel vouchers and related data, including basic mathematical computations.

Credit Recommendation: Credit is not recommended because of the military-specific nature of the course (7/77).

MC-1403-0006

Correspondence Procedures by Correspondence

Course Number: 01.31G.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 3/83-12/86.

Objectives: To provide on-the-job experience in preparing routine correspondence.

Instruction: This correspondence course will provide personnel with beginning knowledge and skills to enable them to select appropriate format, style, form, abbreviations, endorsements, and codes in composing and preparing routine correspondence.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (8/83).

MC-1403-0007

Marine Corps Directives System by Correspondence

Course Number: 01.41.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum of 52 weeks.

Exhibit Dates: 1/83-12/88.

Objectives: To provide training in the fundamental preparation and control of directives and publications.

Instruction: This correspondence course involves on-the-job training to establish, maintain, and control the distribution of records, master directives, and publications.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/83).

MC-1403-0008

Order-Writing Clerk by Correspondence

Course Number: 01.38.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 1/82-12/85.

Objectives: To provide training and on-the-job experience in preparing and processing documents associated with travel.

Instruction: This correspondence course involves study and practical experience in the identification, preparation, processing, and distribution of documents related to domestic and international travel.This includes verification and publishing documents processing reservations and passports, and computation of travel time.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course (3/83).

MC-1403-0009

Basic Travel Clerk

Course Number: 34A.

Location: Financial Management and Personnel Administration School, Cp. Lejeune, NC.

Length: 7-8 weeks (224-252 hours).

Exhibit Dates: 8/83-Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform the various duties involved in basic travel procedures as well as to perform the clerical experiences necessary to insure conformance to travel regulations.

Instruction: Practical exercises and experiences in preparing travel vouchers such as verifying travel status and computing distance, per diem expenses, and travel allowances are provided. In addition, a review of basic mathematics computations is included. Along with a brief orientation to the electronic calculation and the real FAMMIS travel system equipment.

Credit Recommendation: In the vocational certificate category, 2 semester hours in clerical procedures (9/87).

MC-1403-0010

Personal Financial Records Clerk

Course Number: 34M.

Location: Financial Management and Personnel Administration School, Cp. Lejeune, NC.

Length: 8-9 weeks (272-289 hours).

Exhibit Dates: *Version 1:* 9/87-Present. *Version 2:* 10/83-8/87.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to set up and maintain a payroll accounting system that includes the basic concepts, fundamentals, and principles of payroll disbursement; and operate a ten-key electronic calculator, and computerized information and video inquiry systems. *Version 2:* Upon completion of the course, the student will be able to set up and maintain a payroll accounting system that includes the basic concepts, fundamentals, and principles of payroll disbursement; and operate a ten-key electronic calculator, and electric typewriter at a speed of five words per minute, and a video inquiry system.

Instruction: *Version 1:* Covers use of computer and software applications such as DOS, spread sheets, word processing and data base, electronic calculator; payroll disbursement procedures such as basic pay, various allowances, leave entitlements, increases and decreases in pay brought about by extra military duties, court martial penalties and separation payments. Methodology includes lectures, demonstrations and practical exercises. *Version 2:* This course includes training on an electronic calculator, an electric typewriter, and office automation system. It also includes lectures, demonstrations and simulated practices in the various payroll disbursement procedures that include computing not only basic pay but the various allowances and increases and decreases in pay brought about by extra military duties and court martial penalties. Finally, much time is devoted to computing the various payroll deductions as well as processing regular and special payroll activities.

Credit Recommendation: *Version 1:* In the vocational certificate category, 2 semester hours in clerical procedures (4/89); in the lower-division baccalaureate/associate degree category, 2 semester hours in payroll accounting and 2 in computer concepts and software applications (4/89). *Version 2:* In the vocational certificate category, 2 semester hours in clerical procedures (9/87); in the lower-division baccalaureate/associate degree category, 2 semester hours in payroll accounting, 1 in keyboarding (9/87).

MC-1403-0011

INDEPENDENT DUTY ADMINISTRATION

Course Number: AAE.

Location: Financial Management Personnel Administration School, Cp. Lejeune, NC.

Length: 3–4 weeks (125–131 hours).

Exhibit Dates: 8/86–Present.

Learning Outcomes: Upon completion of the course, the student will be able to perform tasks associated with general administration including preparation of reports on Marine Corps reserve officers allowances, composite scores, fitness reports, accounting reports, training reports, reserve manpower management pay system, service records, support requirements and preparation of correspondence and directives.

Instruction: Lectures and practice applications are used to train students in the skills required to perform tasks associated with general administration including preparation of reports, correspondence and directives.

Credit Recommendation: In the vocational certificate category, 3 semester hours in clerical procedures (9/87).

MC-1403-0012

SENIOR CLERK

Course Number: AAC.

Location: Financial Management and Personnel Administration School, Cp. Lejeune, NC.

Length: *Version 1:* 9 weeks (334 hours). *Version 2:* 10 weeks (306 hours).

Exhibit Dates: *Version 1:* 7/86–6/88. *Version 2:* 12/84–6/86.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to edit correspondence orginated by a command, supervise the maintenance of individual records, supervise the procedures of administrative requirements, such as promotions, reductions and fitness reports and include casualty assistance calls, supervise a records management program, produce a unit diary, supervise the administration of military pay allowances, verify the administration of legal issues such as absentees punishments, court marital, suspensions, confinements, process separations, audit and update directives. *Version 2:* Upon completion of the course, the student will be able to function as a mid-level manager in a consolidated battalion/squadron administration office.

Instruction: *Version 1:* Methods of instruction include lecture, practical applications, critques, computer assisted instruction and video tapes. Topics covered include correspondence and directives, individual records, general administration, records management, personnel reporting, military pay and allowances, legal administration, separations and directive maintenance. *Version 2:* Includes lectures and a variety of audio-visual methods that provide specialized instruction in Marine Corps personnel administration procedures. This includes such topics as correspondence, auditing individual records, general administration, issuing directives, records management, personnel reporting supervision, military pay and allowances supervision, and the supervision of legal administration, separations, and the maintenance of the directive system. For the course after this end date, see MC-1403-0015.

Credit Recommendation: *Version 1:* In the lower-division baccalaureate/associate degree category, 3 semester hours in office administration (9/87). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in office administration and 1 in business communication (9/87).

MC-1403-0013

UNIT DIARY CLERK

Course Number: O15.

Location: Financial Management and Personnel Administration School, Cp. Lejeune, NC; Schools Battalion, Cp. Pendleton, CA.

Length: *Version 1:* 8–9 weeks (269–305 hours). *Version 2:* 8 weeks (197–198 hours).

Exhibit Dates: *Version 1:* 1/87–Present. *Version 2:* 10/84–12/86.

Learning Outcomes: Upon completion of the course, the student will be able to prepare and maintain unit diaries, write letters and reports, and audit unit diary management reports.

Instruction: *Version 1:* Lectures and extensive practical workshops in special assignments (typing), unit diary preparation, audit of unit diary management documents, joint uniform pay system-manpower management system, allotments, and systems feedback. *Version 2:* Lectures and extensive practical workshops in general administration, unit diary preparation, audit of unit diary management documents and joint uniform military pay system/nampower management system.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in record keeping, 3 in clerical procedures (11/87); in the lower-division baccalaureate/associate degree category, 2 semester hours in typing (11/87). *Version 2:* In the vocational certificate category, 1 semester hour in record keeping, 3 in clerical procedures (9/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in typing (9/87).

MC-1403-0014

ADMINISTRATIVE CLERK

Course Number: O1T.

Location: Financial Management and Personnel Administration School, Cp. Pendleton, CA; Financial Management and Personnel Administration School, Cp.Lejeune, NC.

Length: *Version 1:* 7–8 weeks (254 hours). *Version 2:* 8 weeks (217 hours).

Exhibit Dates: *Version 1:* 1/87–Present. *Version 2:* 6/84–12/86.

Learning Outcomes: *Version 1:* Upon completion of the course, the student will be able to perform entry level duties in general administration; type various kinds of correspondence using correct military format; maintain a correspondence filing system; demonstrate a typing speed of 25 words per minute. *Version 2:* Upon completion of the course, the student will be able to perform entry level duties in general administration; type various kinds of correspondence, using correct military format; and maintain a correspondence filing system.

Instruction: *All Versions:* This is a course of specialized instruction in typing Naval correspondence, maintaining correspondence files, and preparing military directives. In addition, instruction is presented on general administrative matters to include the preparation of fitness reports, leave authorization, identification cards, and unit punishment books. *Version 1:* This version adds typing requirements and deletes lessons on how to extract information from service records, the privacy act of 1974, composite scores, absentee processing, and classified materials.

Credit Recommendation: *Version 1:* In the vocational certificate category, 1 semester hour in record keeping, 2 in clerical procedures (9/87); in the lower-division baccalaureate/associate degree category, 2 semester hours in typing (9/87). *Version 2:* In the vocational certificate category, 1 semester hour in record keeping, 2 in clerical procedures (9/87); in the lower-division baccalaureate/associate degree category, 1 semester hour in typing (9/87).

MC-1403-0015

SENIOR CLERK

Course Number: AAC.

Location: Service Support School, Cp.Lejeune, NC.

Length: 9–10 weeks (352 hours).

Exhibit Dates: 7/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to edit correspondence originated by a command; supervise the procedures of administrative requirements such as promotions, reductions, and fitness reports and include casualty assistance calls; supervise a records management program; produce a unit diary, supervise administration of military pay and allowances; verify the administration of legal issues such as absentees, punishments, court martials, suspensions and confinements; process separations; audit and update directives and use computerized information and video inquiry systems.

Instruction: Covers correspondence and directives, individual records, general administration, records management, personnel reporting, military pay and allowances, legal administration, separations, directive maintenance and computer and video inquiry systems. Methodology includes lecture, practical applications, computer-assisted instruction and video tapes.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in office administration and 2 in computer concepts and software applications (4/89).

MC-1403-0016

INDIVIDUAL PERSONNEL RECORDS BY CORRESPONDENCE

Course Number: 01.35g.

Location: Marine Corps Institute, Washington, DC.

Length: 52 weeks maximum.

Exhibit Dates: 11/88–Present.

Learning Outcomes: Upon completion of the course, the student will be able to use available legal references and perform the basic duties of a legal clerk; to identify reference material pertaining to non-judicial punishment as well as what constitutes absentee and desertion.

Instruction: This correspondence course covers use of LEGADMINMAN documentation of police, procedure guidelines for legal administration; use of manual for Judge Advocate General; use of manual for court-martial; uniform code of military justice; absentee and deserters.

Credit Recommendation: In the vocational certificate category, 1 semester hour in legal record keeping (6/89).

MC-1404-0001

TELETYPE OPERATOR

Course Number: None.

Location: Communication-Electronics School, San Diego, CA.

Length: 8 weeks (280 hours).

Exhibit Dates: 7/58–12/68.

Objectives: To train sergeants and enlisted personnel to operate teletypewriter sets and associated equipment.

Instruction: Lectures and practical exercises in teletypewriter operation, including touch-typing, teletype procedures and operations, teletype associated equipment operation, and communication center operations and procedures.

Credit Recommendation: In the vocational certificate category, credit in typing and teletype operation on the basis of institutional evaluation (3/74).

MC-1404-0002

MAIL ORDERLY BY CORRESPONDENCE

Course Number: 01.24.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 4/79–12/83.

Objectives: To orient and train newly appointed mail orderlies in regard to their duties and responsibilities.

Instruction: This correspondence course provides generalized instruction in the handling of incoming and outgoing mail, the readdressing and disposition of undeliverable mail, the maintenance of directory files, and procedures for mailroom security.

Credit Recommendation: Credit is not recommended because of the limited, specialized nature of the course(3/83).

MC-1405-0001

AVIATION SUPPLY ENLISTED

Course Number: None.

Location: Supply Schools, Cp. Lejeune, NC.

Length: 5 weeks (147 hours).

Exhibit Dates: 7/67–12/68.

Objectives: To provide supply specialists with intermediate-level training in aviation supply administration.

Instruction: Lectures on supply management, office machines, office procedures, procurement, storage operations, and supply in marine aviation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 1 semester hour in supply management (2/74); in the upper-division baccalaureate category, 1 semester hour in supply management (2/74).

MC-1405-0002

WAREHOUSING NONCOMMISSIONED OFFICER (NCO) LEADERSHIP

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 5 weeks (144 hours).

Exhibit Dates: 7/74–3/85.

Objectives: To provide the formal training required for corporals and gunnery sergeants to effectively perform the duties of a warehouse chief within a garrison or field warehousing operation.

Instruction: Lectures, performances, and demonstrations to provide formal training in all aspects of warehousing operations. Fundamentals of shipping, packing, space utilization, materials handling, transportation, and inventory control are covered.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in supply management (7/77).

MC-1405-0003

PERSONNEL CLERK

Course Number: None.

Location: Schools Battalion, Cp. Pendleton, CA; Headquarters Battalion, Parris Island, SC.

Length: 4–5 weeks (136–180 hours).

Exhibit Dates: 7/72–12/86.

Objectives: To train enlisted personnel to maintain personnel records.

Instruction: Lectures and practical exercises in preparing and updating personnel records, gathering source documents, and preparing and typing individual pay forms.

Credit Recommendation: Credit is not recommended because of the nature of the course (3/74).

MC-1405-0004

BASIC SUPPLY FUNDAMENTALS (MANUAL)
(Basic Supply Administration)

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 4–6 weeks (105–195 hours).

Exhibit Dates: 5/65–3/85.

Objectives: To train supply clerks in the basic and technical procedures of filling organic supply billets.

Instruction: Practical experience in operation and maintenance of office machines and in accounting procedures; lectures in naval correspondence.

Credit Recommendation: Credit is not recommended because of the military nature of the course (3/74).

MC-1405-0005

1. BASIC SUPPLY ADMINISTRATION (MECHANIZED)
2. SUPPLY ADMINISTRATION (Advanced Supply Administration)

Course Number: None.

Location: Supply School, Cp. Lejeune, NC.

Length: *Version 1:* 5–6 weeks (137–202 hours). *Version 2:* 12–16 weeks (341–550 hours).

Exhibit Dates: *Version 1:* 7/70–3/85. *Version 2:* 12/59–6/70.

Objectives: To train enlisted personnel in supply administration.

Instruction: *Version 1:* Lectures and practical exercises in correspondence and typing, publications, allowances, requisitioning procedures, and mechanized accounting procedures. *Version 2:* Lectures and practical exercises in accounting principles, procurement, transportation, warehousing, property control, and supply operations.

Credit Recommendation: *Version 1:* Credit is not recommeded because of the military nature of the course (6/74). *Version 2:* In the vocational certificate category, 3 semester hours in materials management (6/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in materials management (6/74); in the upper-division baccalaureate category, 6 semester hours in supply management (12/68).

MC-1405-0006

SUPPLY NONCOMMISSIONED OFFICER (NCO) LEADERSHIP

Course Number: None.

Location: Service Support Schools, Cp. Lejeune, NC.

Length: 9–12 weeks (294 hours).

Exhibit Dates: 9/73–12/78.

Objectives: To train supply noncommissioned officers to perform as supply administration chiefs in manual and fleet stock accounts as they relate to Marine Corps applications.

Instruction: Lectures and practical exercises in the duties of supply administration chiefs, including NCO service support leadership, publications and allowances, review of manual supply technical behaviors, manual supply NCO leadership and technical behaviors, supply leadership and technical behaviors incident to professional growth and development, mechanized supply technical behaviors within the Fleet Stock Account (FSA) and Supported Activities Supply System (SASSY) operating procedures.

Credit Recommendation: Credit is not recommended because of the military nature of the course (6/74).

MC-1405-0007

1. COMMUNICATION OFFICER
2. COMMUNICATION OFFICER
3. COMMUNICATION OFFICER
4. COMMUNICATION OFFICER

Course Number: None.

Location: *Version 1:* Communication Officers School, Quantico, VA. *Version 2:* Development and Education Command, Quantico, VA. *Version 3:* Marine Corps School, Quantico, VA. *Version 4:* Marine Corps School, Quantico, VA.

Length: *Version 1:* 29–32 weeks (685–694 hours). *Version 2:* 28–29 weeks (670–707 hours). *Version 3:* 28–30 weeks (729–755 hours). *Version 4:* 25-30 weeks (672-757 hours).

Exhibit Dates: *Version 1:* 1/72-7/80. *Version 2:* 2/69-12/71. *Version 3:* 2/63-1/69. *Version 4:* 7/55-1/63.

Objectives: To train officers in the technical requirements, operating procedures, and management of an integrated communication system at the fleet command level.

Instruction: *All Versions:* Lectures and practical exercises in communications operation, including organization, tactics, and amphibious operations. *Version 2:* Instruction includes general communications, ground and aviation unit communication, effective language, communications center organization and operation, radio theory, and communication procedures and equipment. *Version 3:* Instruction includes general communications, ground and aviation unit communication, effective language, communications center organization and operation, radio theory, and communication procedures and equipment. *Version 4:* Instruction includes general communications; ground and aviation unit communication message preparation, processing, and handling; cryptography; radio, radio relay, wire, and teletype communications; theory of electricity; and visual, sound, and miscellaneous communications.

Credit Recommendation: *Version 1:* Credit is not recommended because of the limited specialized nature of the course (6/74). *Version 2:* In the upper-division baccalaureate category, 6 semester hours in communications center organization and management (12/68). *Version 3:* In the upper-division baccalaureate category, 6 semester hours in communications center organization and management, 3 in French or Spanish (12/68). *Version 4:* In the upper-division baccalaureate category, 6 semester hours in communication center organization and management (12/68).

MC-1405-0008

Basic Supply Administration
(Mechanized)

Course Number: None.

Location: Supply Schools, Cp. Lejeune, NC.

Length: 9 weeks (288 hours).

Exhibit Dates: 4/67-12/68.

Objectives: To provide enlisted personnel with the basic skills required for duty as administrative supply clerks.

Instruction: Lectures and practical exercises in the operation of typewriters and calculators, preparation of naval correspondence, use of supply publications, computation of allowances, organic property control procedures, and mechanized supply operations.

Credit Recommendation: In the upper-division baccalaureate category, credit in supply procedures on the basis of institutional evaluation (12/68).

MC-1405-0009

Ordnance Chief

Course Number: None.

Location: Ordnance School, Quantico, VA.

Length: 8 weeks (280 hours).

Exhibit Dates: 2/67-12/74.

Objectives: To train noncommissioned officers in the supervision, management, and administration of ordnance operations.

Instruction: Lectures and practical exercises in the supervision, management and administration of ordnance operations, including ordnance management, machine shops, tracked vehicles, artillery weapons, infantry weapons, ammunition, optical equipment, ordnance staff functions, and management of a garrison.

Credit Recommendation: In the upper-division baccalaureate category, 3 semester hours in management principles of supply and maintenance (12/68).

MC-1405-0010

Special Supply Orientation

Course Number: None.

Location: Supply School, Cp. Lejeune, NC.

Length: 4 weeks (140 hours).

Exhibit Dates: 1/58-12/68.

Objectives: To train newly selected supply officers to manage supply functions and operations.

Instruction: Lectures and practical exercises in the management of supply operations. Course includes a review of the principle elements of the supply system: acquisition and distribution, cataloguing, planning and programming, budgeting and disbursement, inventory management, and direct support of military operations.

Credit Recommendation: In the vocational certificate category, 1 semester hour in supply management (7/74); in the lower-division baccalaureate/associate degree category, 1 semester hour in supply management (7/74); in the upper-division baccalaureate category, 2 semester hours in supply management (12/68).

MC-1405-0011

Supply Chief Leadership

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 10 weeks (362 hours).

Exhibit Dates: 7/75-1/90.

Objectives: To provide senior staff noncommissioned officers with a broad base of understanding inall elements of supply, with emphasis on supply operations and the senior NCO in executing leadership, supervisory, and management responsibilities.

Instruction: Lectures, discussions, and practical exercises with emphasis on leadership and supervisory practices; supply accounting procedures; data systems, including records design, flowcharting, input and output devices and media; programming techniques and coding in a symbolic language; introduction to and practice in the Supported Activities Supply System (SASSY).

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in principles of supervision, 3 in introduction to data processing (7/77).

MC-1405-0012

Basic Supply Stock Control

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC.

Length: 7 weeks (218 hours).

Exhibit Dates: 7/75-3/80.

Objectives: To train entry-level Marines to perform as supply administrator/operations clerks.

Instruction: Lectures, demonstrations, and practical performances in the basic skills of supply accounting required in the daily operation of a supply account. Includes instruction in typing and filing necessary to maintain supply records. See MC-1405-0035 for exhibit after end date.

Credit Recommendation: In the vocational certificate category, 1 semester hour in personal typing, 2 in records management (7/77).

MC-1405-0013

Warehousing Staff Noncommissioned
Officer (NCO) Leadership
(Advanced Warehousing)

Course Number: None.

Location: Service Support School, Cp. Lejeune NC; Supply School, Cp. Lejeune NC.

Length: 5-6 weeks (165-193 hours).

Exhibit Dates: 4/64-3/84.

Objectives: To train noncommissioned officers to handle warehouse operations and perform the duties of a warehouse chief within a garrison or field warehousing operation.

Instruction: Lectures and practical exercises in the duties of a warehouse chief. Course includes fundamentals of warehousing, shipping, packing, space layout, and utilization, materials-handling equipment, and transportation.

Credit Recommendation: In the lower-division baccalaureate/associate degree category, 3 semester hours in supply management (7/74).

MC-1405-0014

Senior Enlisted Supply

Course Number: None.

Location: Service Support School, Cp. Lejeune NC; Supply School, Cp. Lejeune NC.

Length: 7 weeks (201-256 hours).

Exhibit Dates: 8/63-3/84.

Objectives: To train noncommissioned officers to operate supply systems.

Instruction: Lectures and practical exercises in the operation of supply systems, including supply management, office management, property control, maintenance and disposal of equipment, small-purchase procedures, transportation, and financial management.

Credit Recommendation: In the vocational certificate category, 2 semester hours in supply management (7/74); in the lower-division baccalaureate/associate degree category, 2 semester hours in supply management (7/74); in the upper-division baccalaureate category, 2 semester hours in supply management (7/74).

MC-1405-0015

Accountable Officer

Course Number: None.

Location: Supply School, Cp. Lejeune, NC.

Length: 12 weeks (420 hours).

Exhibit Dates: 2/55-12/68.

Objectives: To train commissioned officers to manage supply accounts.

Instruction: Lectures and practical exercises in the management of supply accounts. Course includes supply procedures and operations, fiscal accounting, storage and materials handling, and transportation.

Credit Recommendation: In the vocational certificate category, 4 semester hours in supply management (7/74); in the lower-division baccalaureate/associate degree category, 4 semester hours in supply management (7/74); in the upper-division baccalaureate category, 4 semester hours in supply management (12/68).

MC-1405-0016

Officers Warehousing

Course Number: None.

Location: Service Support School, Cp. Lejeune, NC; Supply School, Cp. Lejeune, NC.

Length: 4-5 weeks (139-165 hours).

Exhibit Dates: 8/67-12/74.

Objectives: To train commissioned officers to perform as warehousing officers.

Instruction: Lectures and practical exercises in the duties of a warehouse officer. Course includes technical publications; storage facility planning and management; materials-handling equipment; inventory procedures; receiving, issuing, and shipping procedures; storage methods; and packing, packaging, and preservation.

Credit Recommendation: In the vocational certificate category, 1 semester hour in supply management (7/74); in the lower-division baccalaureate/associate degree category, 1 semester hour in supply management (7/74); in the upper-division baccalaureate category, 3 semester hours in supply management (12/68).

MC-1405-0017

Unit Supply Officer

Course Number: None.

Location: Supply School, Cp. Lejeune, NC.

Length: 7-12 weeks (244-382 hours).

Exhibit Dates: 11/59-3/85.

Objectives: To train officers as supply officers.

Instruction: Lectures and practical exercises in supply procedures, including supply management, office management, property control, financial management, accounting, systems analysis, procurement, transportation, distribution, storage operations, and computerized supply operations.

Credit Recommendation: In the vocational certificate category, 3 semester hours in supply management (7/74); in the lower-division baccalaureate/associate degree category, 3 semester hours in supply management (7/74); in the upper-division baccalaureate category, 4 semester hours in supply management (12/68).

MC-1405-0018

Aviation Supply Officer

Course Number: None.

Location: *Version 1:* Service Support School, Cp. Lejeune, NC. *Version 2:* Supply School, Cp. Lejeune, NC.

Length: *Version 1:* 10 weeks (359 hours). *Version 2:* 8-10 weeks (277-326 hours).

Exhibit Dates: *Version 1:* 7/68-3/85. *Version 2:* 10/63-6/68.

Objectives: To train Marine Corps officers in the fundamentals and functions of the Navy supply system.

Instruction: Lectures and practical exercises in the fundamentals of supply management, office procedures, financial management, purchasing, inventory control, and systems analysis.

Credit Recommendation: *Version 1:* In the upper-division baccalaureate category, 3 semester hours in supply management (7/74). *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours in supply management (7/74); in the upper-division baccalaureate category, 5 semester hours in supply management (12/68).

MC-1405-0019

1. Basic Communication Officer
2. Basic Communication Officer
3. Basic Communication Officer (BCOC)
   (Basic Communications Officer)
4. Basic Communication Officer
   (Communication Officers Orientation)

Course Number: None.

Location: *Version 1:* Communication School, Quantico, VA. *Version 2:* Communication School, Quantico, VA. *Version 3:* Development and Education Command, Quantico, VA. *Version 4:* Development and Education Command, Quantico, VA; Marine Corps School, Quantico, VA.

Length: *Version 1:* 14 weeks (686 hours). *Version 2:* 14 weeks (418-419 hours). *Version 3:* 9-11 weeks (277-347 hours). *Version 4:* 5-9 weeks (135-276 hours).

Exhibit Dates: *Version 1:* 8/85-Present. *Version 2:* 12/79-7/85. *Version 3:* 9/69-11/79. *Version 4:* 5/56-8/69.

Objectives: To train basic school graduates in the responsibilities and duties as communications officers.

Instruction: *All Versions:* Lectures and practical exercises in communication center organization and operation, basic radio theory, communication equipment and procedures, amphibious operations, and command and staff organization. *Version 2:* Course offers lectures of an introductory level in electricity and electric power generation and distribution, electomagnetic wave progagation, principles of radio transmitters and receivers, transmission lines and antennas, computerized communications techniques, security methods, cryptographic equipment use and maintenance, methods of planning and managing a communications system, signal characteristics, uses, and advantages of AM, FM, SSB, and PCM types of transmission, siting and operational problems, and installation, operation and maintenance of a complete system. Some additional instruction is devoted to amphibious operation and maintenance and supply.

Credit Recommendation: *Version 1:* Pending evaluation. *Version 2:* In the lower-division baccalaureate/associate degree category, 3 semester hours as a technical elective for non-electronic technology or non-bachelor-of-science electronic technology majors (11/81). *Version 3:* Credit is not recommended because of the limited specialized nature of the course (12/77). *Version 4:* In the upper-division baccalaureate category, 2 semester hours in communications center management (12/68).

MC-1405-0020

Basic Warehousing by Correspondence

Course Number: 30.1k.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84-12/88.

Objectives: The course, a combination of self study and on-job training, presents principles of physical storage, material handling, packaging, and preparation for logistical movement.

Instruction: The material covered by the course includes safety, space planning, records and record keeping, material handling, and packing requirements. Also included in the course is a study of elementary mathematical computations and camouflage techniques.Course concludes with a proctored examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in warehousing (8/84); in the lower-division baccalaureate/associate degree category, 1 semester hour in physical distribution or transportation management or, if taken in conjunction with MCI 30.3h, Warehousing Operations by Correspondence (MC-1405-0021), 3 semester hours in physical distribution or transportation management (8/84).

MC-1405-0021

Warehousing Operations by Correspondence

Course Number: 30.3h.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 4/84-Present.

Objectives: To give added depth to materials presented in MCI 30.lk, especially in the area of storage space and packaging.

Instruction: The material presented in the course includes storage, material handling and packaging techniques. Also included are specific storage techniques for lunber and ammunition. Course concludes with a proctored examination.

Credit Recommendation: In the vocational certificate category, 2 semester hours in warehousing (8/84); in the lower-division baccalaureate/associate degree category, 2 semester hours in physical distribution or transportation management or,if taken in conjunction with 30.lK, Basic Warehousing by Correspondence (MC-1405-0020), 3 semester hours in physical distribution or transportation management (8/84).

MC-1405-0022

Mechanization of Warehousing and Shipment Process (MOWASP) by Correspondence

Course Number: 30.19.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 7/78-12/88.

Objectives: To enable Marine Corps warehousing personnel to prepare and process issue, receipts, and other forms utilized in mechanized warehousing.

Instruction: Topics in this correspondence course include responsibility of the various organizations involved in the automated material supply system, processing of receipts and issues, filing of claims against commercial carriers for losses or damages, inspection procedures and processing of inventory counts. Also included are transportation procedures and the preparation of reports on the status of material.

Credit Recommendation: In the vocational certificate category, 1 semester hour in warehousing operations (8/84). Course concludes with a proctored examination.

MC-1405-0023

Marine Corps Technical Publications System by Correspondence

Course Number: 30.23a-1; 30.23.

Location: Marine Corps Institute, Washington, DC.

Length: Maximum 52 weeks.

Exhibit Dates: 7/82-11/87.

Objectives: To enable the student to know how to establish a Marine Corps supply technical publications library and how to follow the procedures for identifying stock numbers and other technical supply information.

Instruction: Topics include establishing a supply technical publication library, identifying component and repair parts information and the procedures for locating stock numbers and sources of supply. Also included are the procedures and use of forms for ordering clothing and equipment.

Credit Recommendation: In the vocational certificate category, 1 semester hour in materiel procedures (8/84).Course concludes with a proctored examination.

MC-1405-0024

SUPPORTED ACTIVITIES SUPPLY SYSTEM (SASSY) ORGANIC PROCEDURES BY CORRESPONDENCE

Course Number: 30.9f; 30.9e.
Location: Marine Corps Institute, Washington, DC.
Length: Maximum 52 weeks.
Exhibit Dates: 1/84–7/86.
Objectives: To provide supply personnel with a basic knowledge of techinques for recording periodic and miscellaneous transactions between user units and a centralized management unit.
Instruction: This correspondence course trains supply clerks in the proper procedure for processing forms relative to subjects such as warehousing operatons, maintenance of equipment and deployment procedures necessary in the operation of a supply unit.The course has a proctored final examination which is required.
